ICRA is a biannual international conference series started in 1974. It brings together well-established experts and young researchers in representation theory and in allied fields where representation theory is applied.

The first week will consist of a workshop with six lecture series, including introductory talks and on topics of particular current interest, such as recent links to both topological data analysis and to mathematical physics. One of the lecture series will be devoted to the mathematical heritage of Ragnar Buchweitz.

The second week will be a conference with invited speakers in addition to contributed talks, both in plenary and in parallel sessions.

## Topics:

Representation theory of algebras and its applications, including:

- Topological Data Analysis
- Cluster algebras
- Non-commutative algebraic geometry
- Modular representation theory
