Fifth ICTP Workshop on the theory and Use of Regional  
Climate Models

Trieste-Italy, 31 May 2010-11 June 2010

(a) ICTP and Egyptian Meteorological Authority, Cairo, Egypt

(b) ICTP

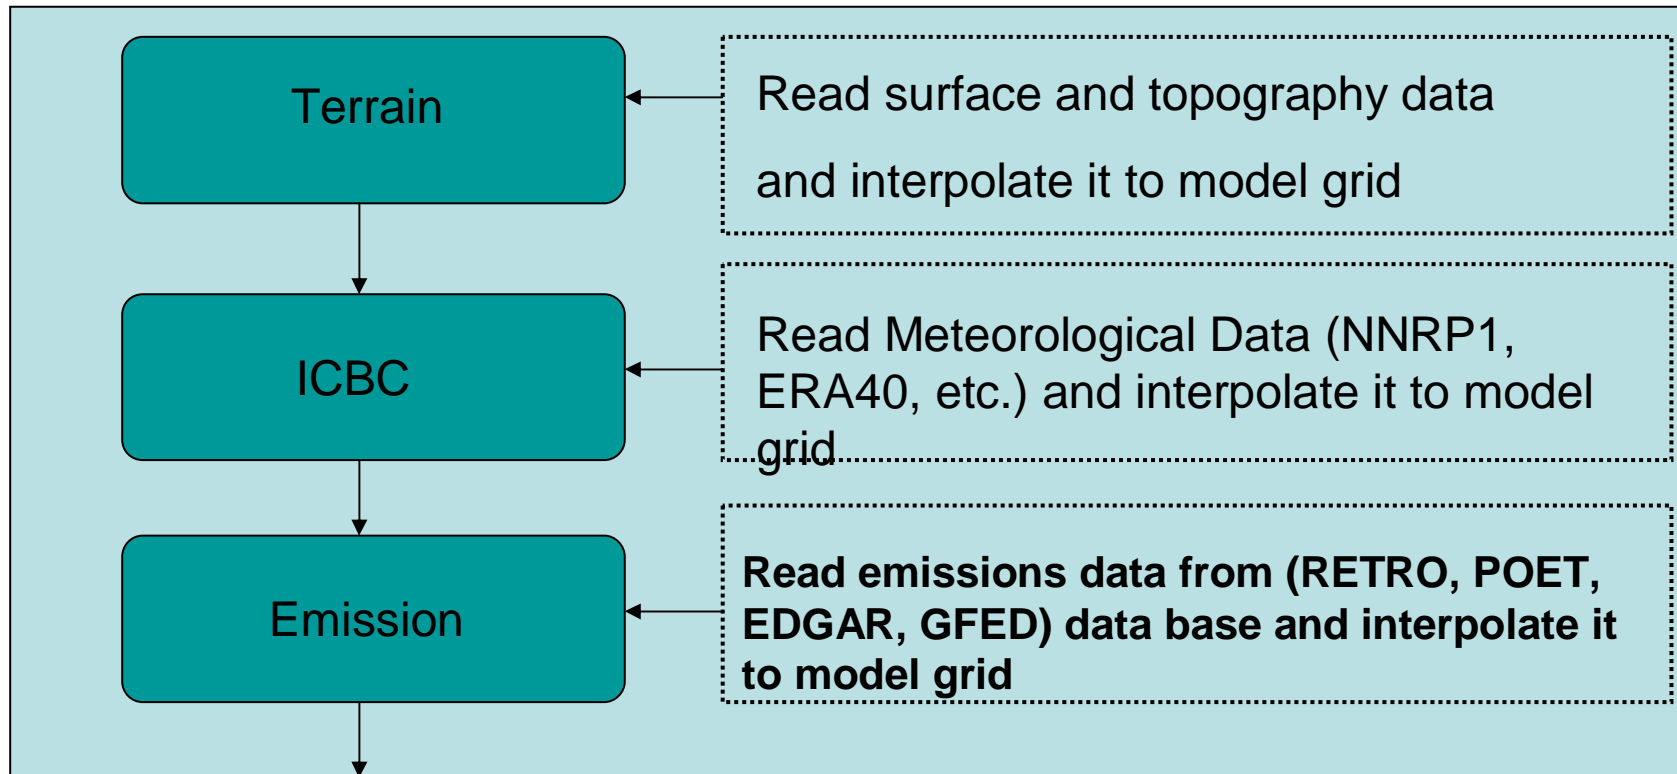

# Why Chemistry?

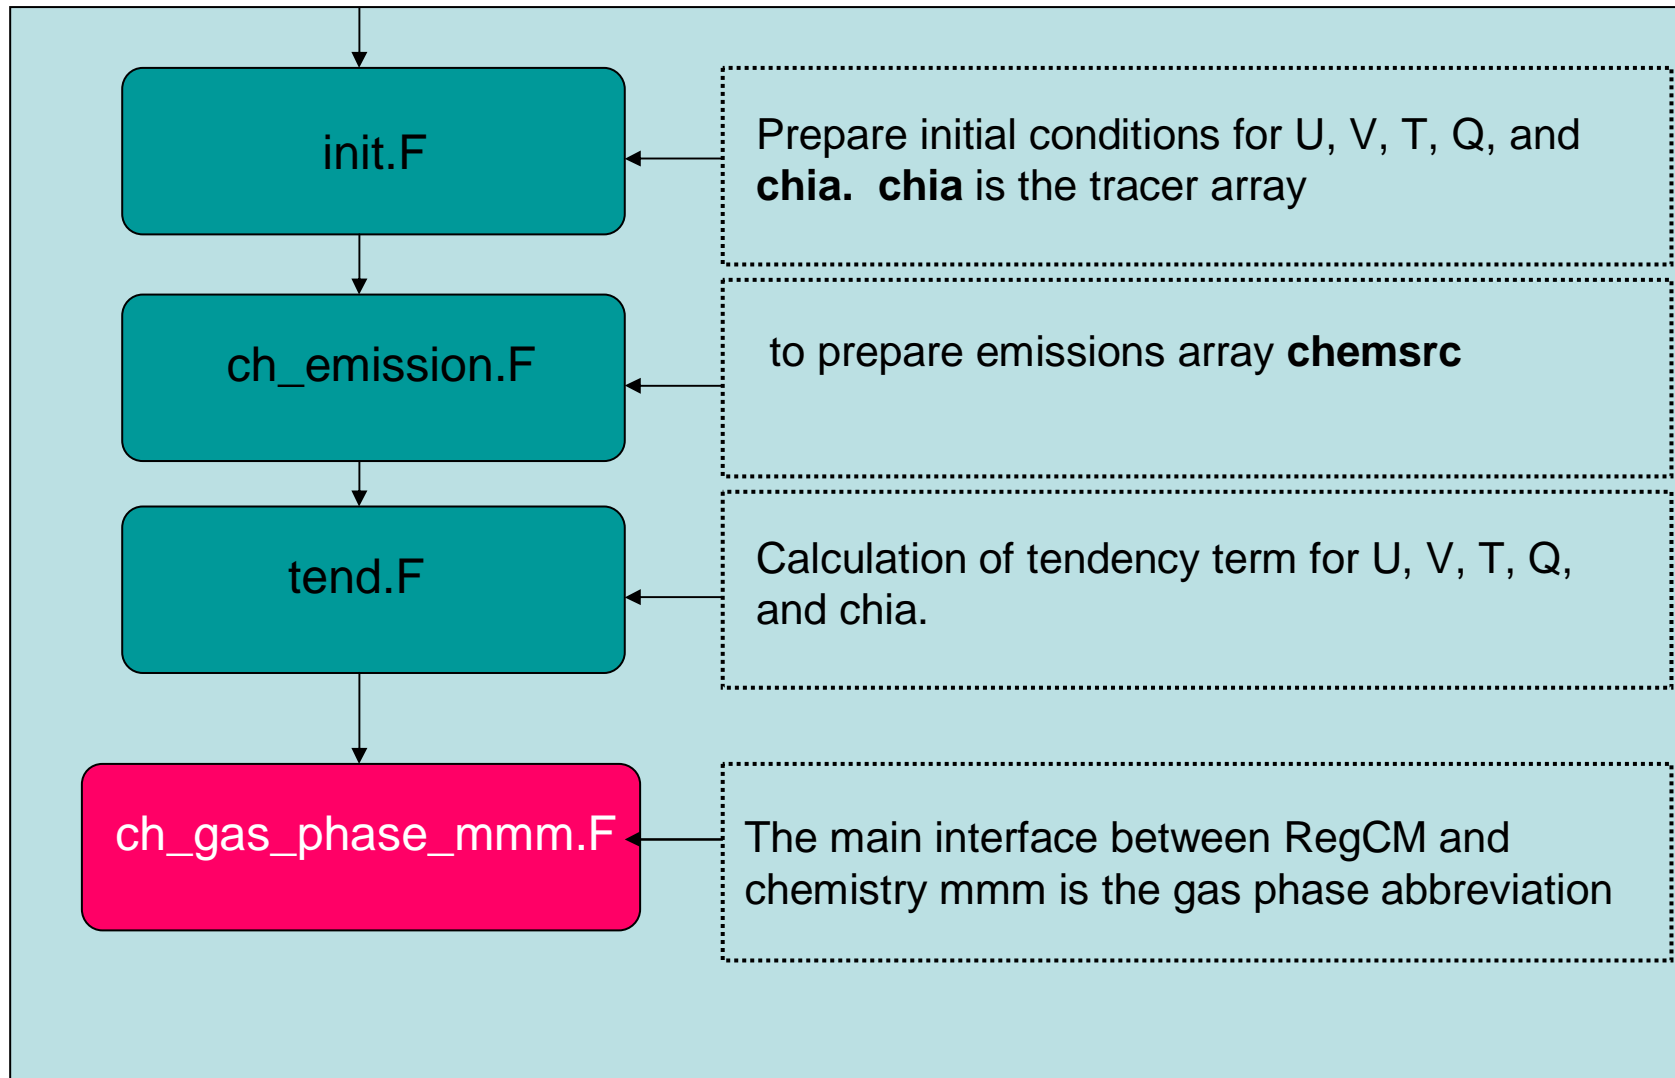

# RegCM-CHEM Flow Charts

## Pre-Processes

## Main (regcm.F)

# Emissions Inventories

RETRO	Biomass burning and anthropogenic	1960-2000	0.5°X0.5°	monthly
POET	Biomass burning, anthropogenic and biogenic	1990-2000	1°X1°	annually
EDGAR	Biomass burning, anthropogenic and biogenic	2000	1°X1°	annually
GFED v2	Biomass burning	1995-2005	1°X1°	annually

# List of species

Species	POET	RETRO	EDGAR	GFED
CO	•	•	•	•
NOx	•	•	•	•
CH <sub>4</sub> (methane)	•	• (burning only)	•	•
C <sub>2</sub> H <sub>6</sub> (ethane)	•	•		
C <sub>2</sub> H <sub>4</sub> (ethene)	•	•		
C <sub>3</sub> H <sub>8</sub> (propane)	•	•		
C <sub>3</sub> H <sub>6</sub> (propene)	•	•		
Butane and higher	•	•		
Toluene	•	•		
CH <sub>3</sub> OH(methanol)	•	•		
C <sub>2</sub> H <sub>5</sub> OH(ethanol)	•	•		
C <sub>3</sub> H <sub>7</sub> OH(propanol)	•	•		

CH <sub>2</sub> OH(formaldehyde)	•	• (burning only)		
CH <sub>3</sub> CHO(acetaldehyde)	•	• (burning only)		
CH <sub>3</sub> COCH <sub>3</sub> (acetone)	•	•		
CH <sub>3</sub> COCH <sub>2</sub> CH <sub>3</sub> (Mek)	•			
C <sub>2</sub> H <sub>2</sub> (ethyne)		•		
C <sub>6</sub> H <sub>6</sub> (benzene)		•		
Xylene		•		
Isoprene (C <sub>4</sub> H <sub>x</sub> )	•(biogenic)	• (burning only)		
Monoterpenes	•(biogenic)	• (burning only)		
H <sub>2</sub> (hydrogen)	•	• (burning only)		
N <sub>2</sub> O	•	• (burning only)	•	•
NH <sub>3</sub> (ammonia)	•	• (burning only)		
Organic Carbon ('OC')	•	• (burning only)		•

Black Carbon ('BC')				•
Total Carbon ('TC')				
SO <sub>2</sub>			•	
('PM <sub>2.5</sub> ')				•
NMVOC				•
CO <sub>2</sub>		•(burning only)	•	•
C				•
DMS			•	

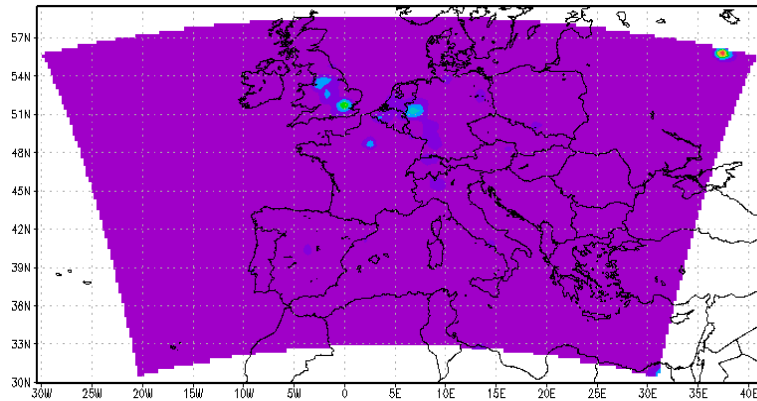

# Emissions Pre-Process

- All emissions are in NetCDF format, and been read directly and interpolated to model grid
- User can choose among several emission inventories
- User can switch between anthropogenic and biogenic emissions
- The availability to add more emission inventories
- The output is AERO.dat AERO.cti, AERO.dat is multi month file.

# Chemistry inside the Atmosphere

# Gas-Phase Mechanisms

Gas-Phase Mechanism is “a set of photolysis, inorganic, and organic reactions of a group of (inorganic and organic gas phase species)”

Example for photolysis reaction to produce ozone.

Each reaction is represent by a certain ordinary differential equation

$$D[\text{NO}_2]/Dt = k_2[\text{NO}][\text{O}_3] - j[\text{NO}_2]$$

$$D[X]/Dt = \sum P_c - \sum L_c$$

There are many ways to solve such system of ODE like

Euler  
Backward-Forward  
Gear's method  
Rosenbrock  
LSODE
