- About the Association for Learning Technology (ALT)
- Making a conventional closed academic journal Open
- Dissemination =
- Some broader issues
- Concluding points

About ALT “Learning Technology” 1/4

“**Learning technology** is the broad range of communication, information and related technologies that can be used to support learning, teaching, and assessment.”

“**Learning technologists** are people who are actively involved in managing, researching, supporting or enabling learning with the use of learning technology.”

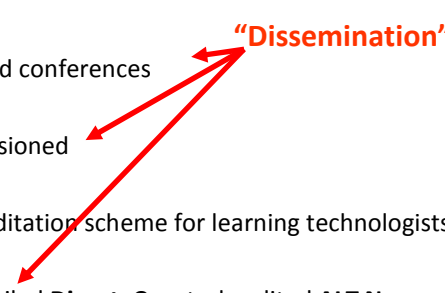

<http://alt.ac.uk/>

About ALT – young and quite small **2/4**

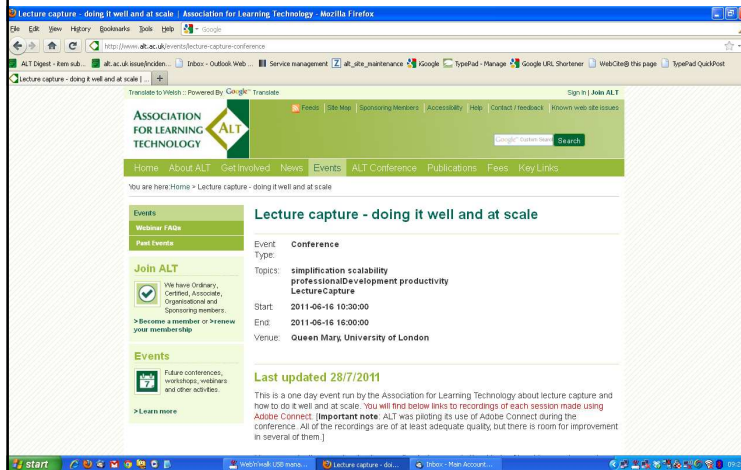

- 18 years old
- 225 organisational and sponsoring members - stable
- 900 individual members – growing rapidly (432 in 2007)
- £0.45m turnover
 - £160k staffing - ~4 staff
 - £ 40k journal
 - £200k conference
 - £ 50k overheads(all figures approximate)

About ALT - activities **3/4**

ALT's Object: *"to advance education through increasing, exploring and disseminating knowledge in the field of learning technology for the benefit of the general public"*

1. Policy consultation responses
 2. Workshops, free webinars, and conferences
 3. Projects – bid for and commissioned
 4. CMALT – a professional accreditation scheme for learning technologists
 5. Publications – Fortnightly emailed **Digest**; Quarterly edited **ALT News Online**; the journal **Research in Learning Technology**; Open Access repository
- 
- "Dissemination"**

About ALT - activities 4/4

(From <http://www.alt.ac.uk/events/lecture-capture-conference> Where you will find: "Four years of automated audio-video-slide recordings using the EyA system" - Marco Zennaro and Enrique Canessa – ICTP <http://goo.gl/YyWJr>)

?

- About ALT
- Making a conventional closed academic journal Open**
- Dissemination =
- Some broader issues
- Concluding points

Research in Learning Technology – a traditional journal in transition 1/6

- **Research in Learning Technology** “aims to raise the profile of research in learning technology.....”
- 3 Issues/year, intending to grow to 4 or more
- 1000 subscribers (mix of organisations and individuals)
- Examples of recent special issues:
 - Transformational Impact of Learning Technology – V18, Issue 3, 2010
 - Mobile and Contextual Learning – V17, Issue 3, 2009
 - Learning and Teaching in Immersive Virtual Worlds – V16, Issue 3, 2008
- By agreement with Routledge our current publisher – back numbers > 18 months old hosted in our Open Access Repository
- From January 2012 Research in Learning Technology will be fully Open Access published in partnership with Co-Action Publishing in Sweden

Material that is Open is more easily found 2/6

The screenshot shows a Google Scholar search for "flying not flapping". The search results are displayed in a table format. The first result is "Flying not flapping: a strategic framework for e-learning and pedagogical innovation in higher education institutions" by G. Salmon, published in the Association for Learning Technology Journal in 2005. A red circle highlights the PDF link "PDF from alt.ac.uk". Other results include "The double life of an i-Pod: a case study of the educational potential of new technologies" by P. Edrington (2007), "Developing the media zoo in second life" by M. Wheeler (2009), and "Notes for University Teachers of the 21st Century" by G. Salmon (2008).

Flying not flapping: a strategic framework for e-learning and pedagogical innovation in higher education institutions G Salmon - Association for Learning Technology Journal, 2005 - repository alt.ac.uk E-learning is in a rather extraordinary position. It was born as a 'tool' and now finds itself in the guise of a somewhat wobbly arrow of change. In practice, changing the way thousands of teachers teach, learners learn, innovation is promoted and sustainable change in traditional ... It is very early days

Our aim for our Open Access journal:

“growth in esteem, readership, submissions, citations, and overall influence and utility”

2014 is the earliest we will know if we’ve achieved this.....

Dissemination = deciding whom to tell 5/5

- About ALT
- Making a conventional closed academic journal Open
- Dissemination = users exercising choice
- Some broader issues**
- Concluding points

Broader issues - paying attention **1/2**

Picture by J Daniel Ashton - <http://tinyurl.com/66t8xk2>

•You never know what's around the corner; and you must pay attention!

- Consider
 - SMS (texting);
 - the “bumblebee” that is Wikipedia;
 - the music industry's failure to embrace the Internet
 - Stanford University securing **200,000** enrolments to three free online computer science courses in the first three weeks of August 2011

For more on these see:

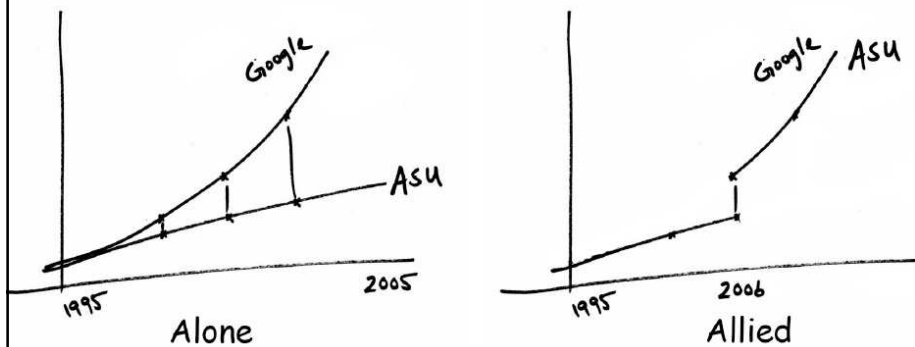

John Naughton's “The Elusive Technological Future” from the 2011 ALT Conference at <http://altc2011.alt.ac.uk/talks/22311>

Some observations of Stanford's free courses in my Fortnightly Mailing at <http://fm.schmoller.net/2011/09/why-give-a-course-away-online-for-free.html>)

Broader issues – forced private/public partnership 2/2

Many newer dissemination methods involve reliance on businesses with:

- potential for lock-in
- potential for privacy problems (real or feared?)
- transfer of your data from your own control to someone else's
- the risk of a key service being taken down

Source: talk at ALT conference by Google's Director of Research Peter Norvig <http://www.alt.ac.uk/altc2007/>

Broader issues – Open Source ≠ Open Content 3/3

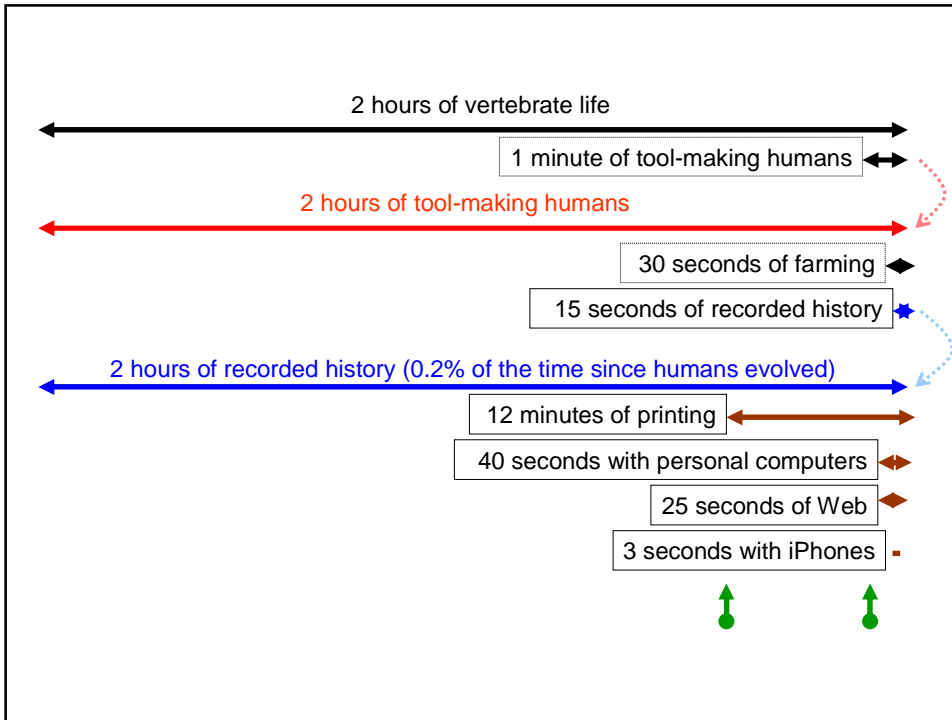

Open Source Software	Open Content
Anyone can see and modify the code	Anyone or nearly anyone can see and modify the content
Mission critical purposes therefore users will spend money to make sure it works	<i>Use is rarely mission critical</i>
Software can be made in a modular way enabling concentrated focus on one thing at a time.	The curriculum probably counts as modular?
Software code can be tested rigorously, cheaply, and quickly, to see if it performs	<i>Open Content can only be rigorously tested (if it can be at all) over a long period and at great expense.</i>
There are a range of established governance models (foundation; benevolent dictator)	<i>The governance models are not well developed (subject community?)</i>
There is an overlap between the production medium and the product (typically done by distributed teams over the Internet – all contributors are completely fluent in the production and distribution process)	<i>There is much less overlap between the medium and the product, and contributors are not necessarily fluent in the methods.</i>
Few institutional or policy barriers mean there is a very large base of potential users of the OSS (See also Stephen Weber's 2004 The Success of Open Source ISBN 06774012925)	<i>There are many institutional and policy barriers (this or that accreditor; this or that subject; this or that level) meaning that there are a lot of "niche" areas. Niche => Small; but we need big scale</i>

- About ALT
- Making a conventional closed academic journal Open
- Dissemination = users exercising choice
- Some broader issues
- Concluding points**

Concluding points

- Snippets and the limitations of “140 characters”
- Performance and fame: “The desire for privacy is strong; vanity is stronger.”
(Nicholas Carr - <http://www.roughype.com/>)
- The blurring of boundaries between dissemination & teaching, and between participation & learning
- The extent to which some of the services we will rely on will depend on their being offered at very big scale – a scale we may not be able to match at country or institution or discipline level
- The crucial role of search in dissemination – which sorts things “on the way out of where they sit” rather than them “having been sorted on the way in”
- Finally, a quirky diagram
