Exercises

1. Develop one program which implements a one-way communication among two processes for a buffer of size N
2. Extend point 1 implementing a two-way communication among two processes
3. Extend point 3 using no-blocking communication
4. Implement a communication pattern among a ring of N processes where a process K receives data from process $K-1$. 0 receive from $N-1$.

Exercises

1. Implement a program that allocates a Matrix distributed among processes (equally dividing the domain), initializes the local-domains randomly and print the entire Matrix from a single process root.

Compute π

$$\int_0^1 \frac{1}{1+x^2} dx = \arctan(x) \Big|_0^1 = \arctan(1) - \arctan(0) = \arctan(1) = \frac{\pi}{4}$$

$$\pi = 4 \int_0^1 \frac{1}{1+x^2} dx$$

Integrate, i.e determine area under function numerically using slices of $h * f(x)$ at midpoints
