

Decadal Variation of ENSO teleconnection in the South Asian region

On the Arabian Peninsula Precipitation

**In-Sik Kang^(1,2), Mansour Almazouri⁽²⁾, Irfan Rashid⁽²⁾,
Fred Kucharski^(2,3)**

- 1) Seoul National University, Korea
- 2) King Abulaziz University, Saudi Arabia
- 3) ICTP, Italy

In 2010, King Abdulaziz University, Saudi Arabia established Center of Excellence for Climate Change Research (**CECCR**)

Research Fields at CECCR:

- Development of Global Climate Model based on SNU-GCM
 - Seasonal Prediction (Decadal to intra-seasonal time scale)
 - Long-term climate studies
 - Moving towards the seamless prediction
- Regional Climate Modeling studies
- Climate change
- Weather and climate extremes
- Impacts of climate change on the climate of the Arabian Peninsula

Research Facilities at CECCR:

- Aziz Super Computer (12000 cores, 7.5 Pb Storage)
- Experienced Research Team
- Graduate Students (PhD, MSc)
- Post Doctoral Researchers

CECCR is a unique center in the Arab region and it can be considered a regional hub in the field of **Climate and Climate Change** research.

CECCR conducted a Regional Targeted Training Workshop on Seasonal Prediction for the Arab Region

December 2014

Lecture Session (Morning)

Practical Session (Afternoon)

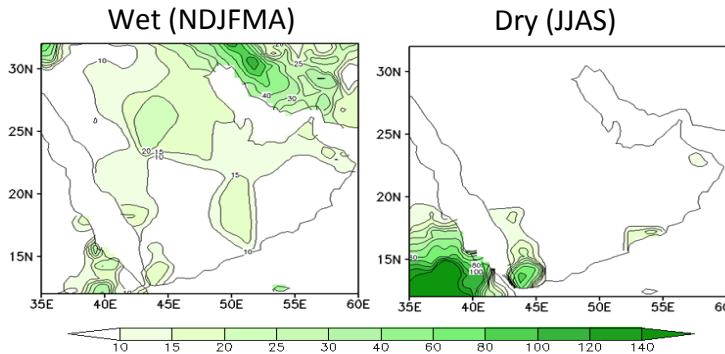

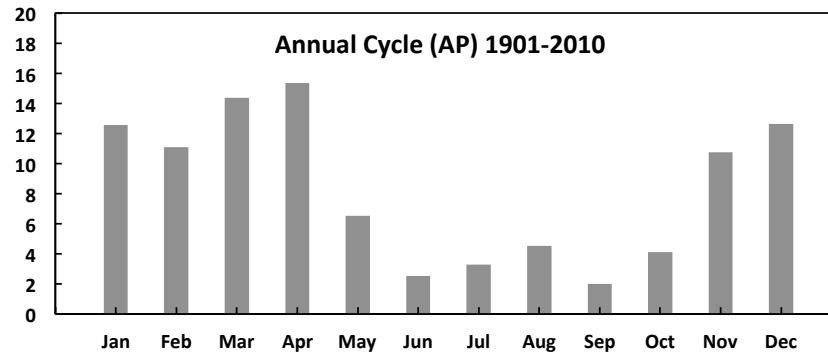

Collaborations

CECCR is collaborating with regional and international institutes including

- International Centre for Theoretical Physics (ICTP), Italy
- Colombia University, USA
- Seoul National University (SNU), South Korea
- Climatic Research Unit (CRU), University of East Anglia, UK

The Director of CECCR Prof. Mansour Almazroui is keen to work with other collaborators from home and abroad.

Precipitation Climatology in the AP region

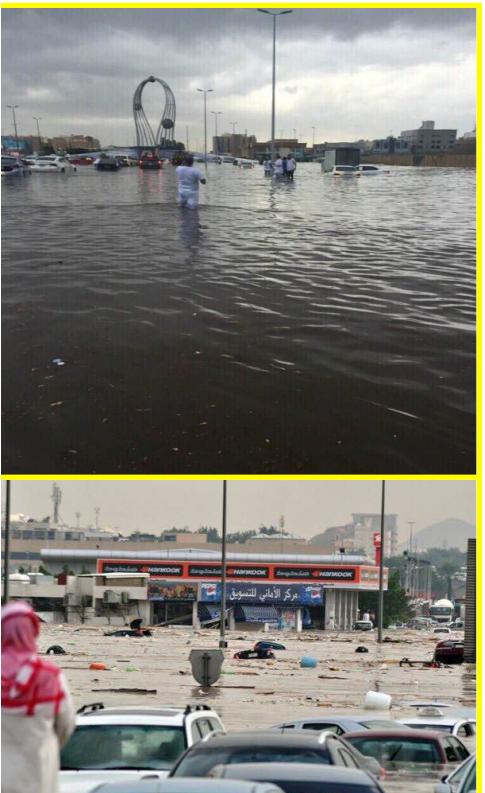

**Extreme Rainfall Event in
Jeddah: 25 NOV 2009
(111mm)**

**Extreme Rainfall Event
in Jeddah: 26 JAN 2011
(74mm)**

Extreme Rainfall Event in Jeddah: 17 NOV 2015

**Re: Transportation Information:
Airport-hotel-Airport**

Today at 19:39

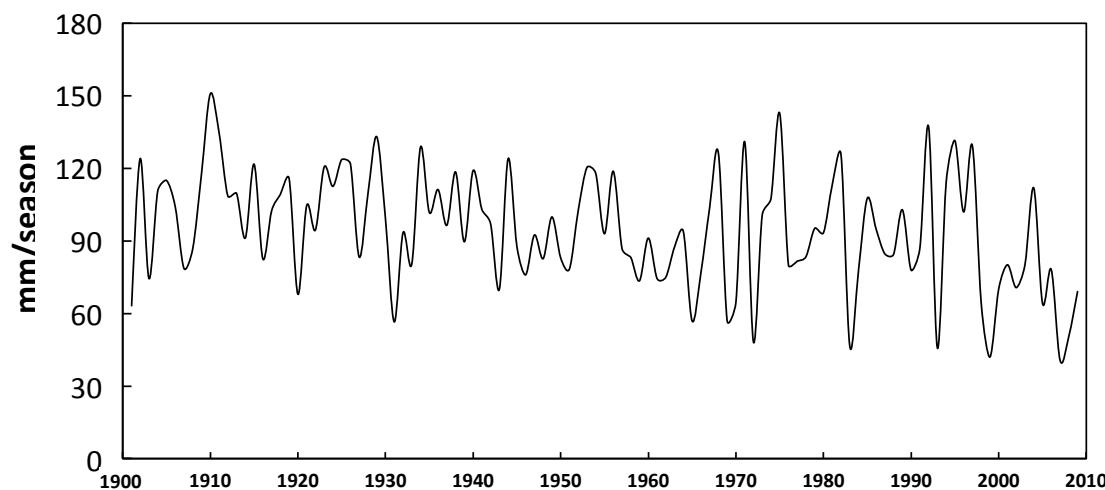

Dear Mansour

Just to be sure, do you know the name of the hotel the taxi driver is dropping me?

Wow, i never seen so much water on the street.

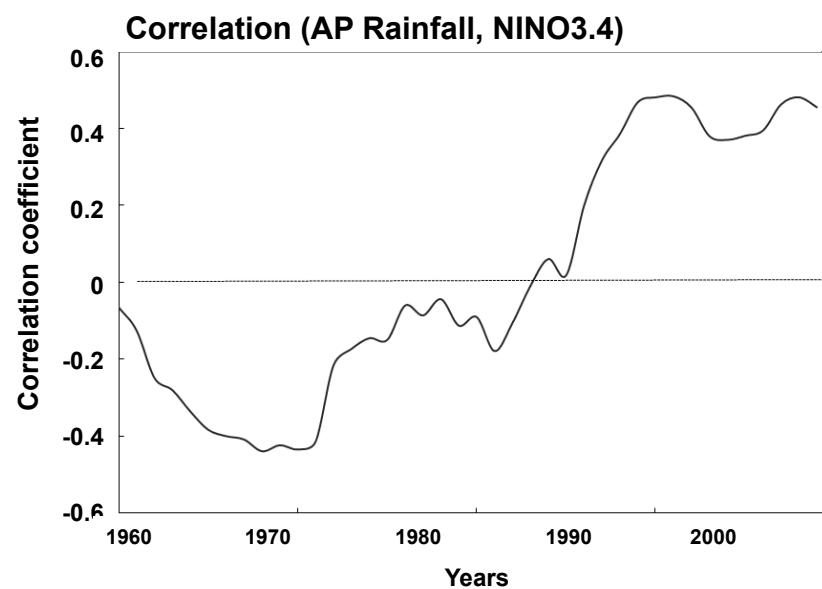

**The year 2015 is a STRONG
El Nino year!!!**

AP Regional Mean Precipitation for Wet Season
(1901-2010)

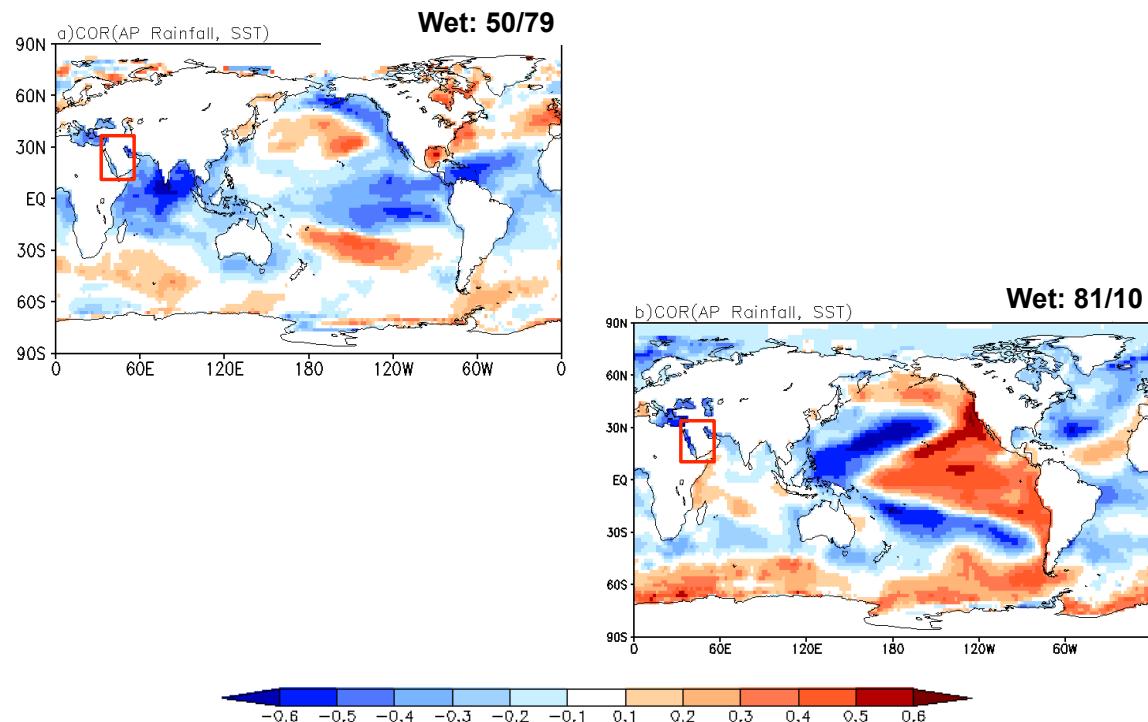

Multi-decadal relation between the AP rainfall and ENSO

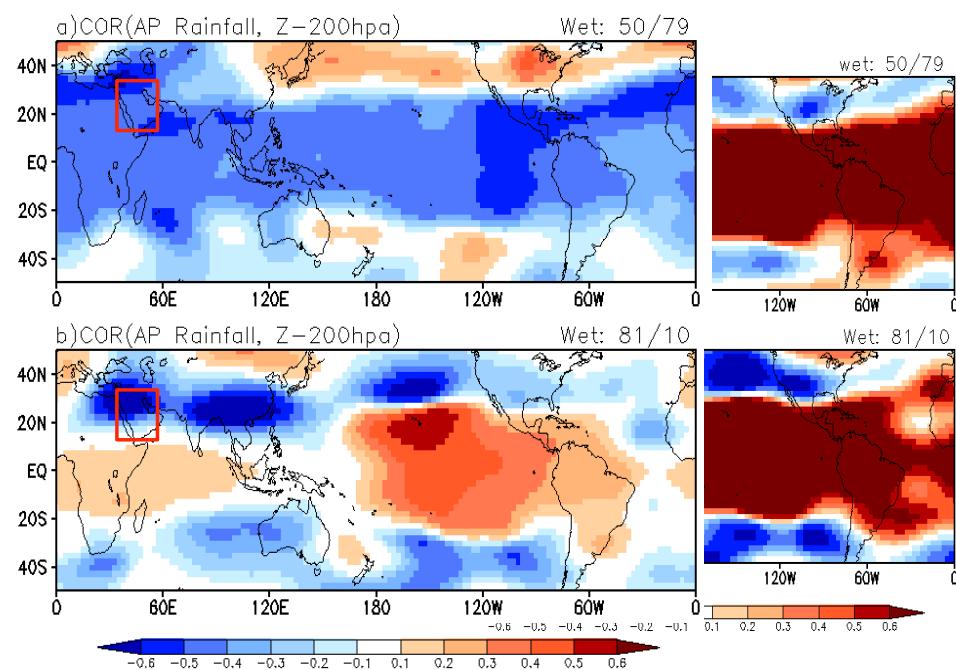

**Running correlation between Arabian Rainfall and NINO 3.4 index

Decadal Changes of Global C
irculation Modes**

EOF of GPH(200mb) and the correlated SST anomaly pattern
'1950-1979)

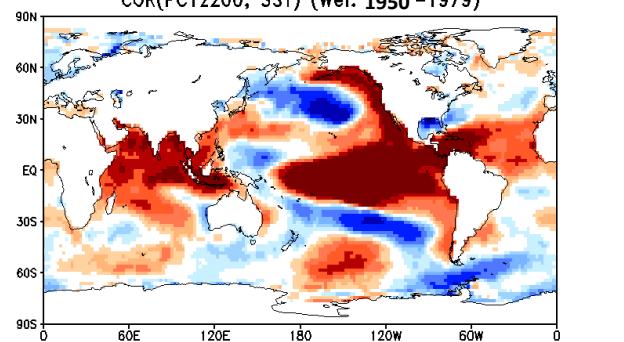

EOF1 Wet:50/79 32.5%

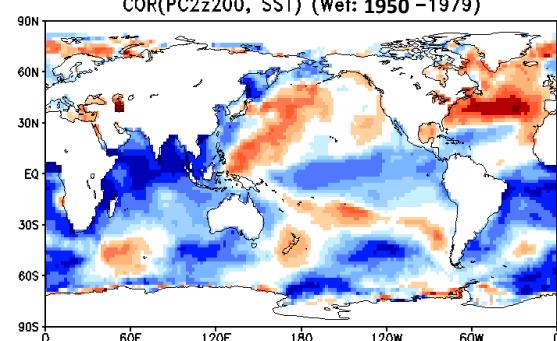

EOF2 Wet:50/79 13.8%

COR(PC1z200, SST) (Wet: 1950 -1979)

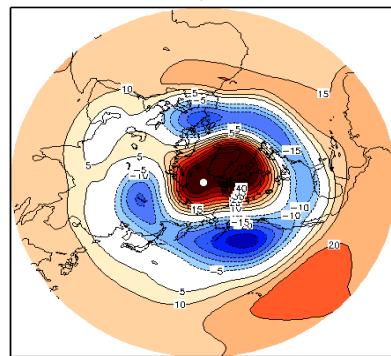

COR(PC2z200, SST) (Wet: 1950 -1979)

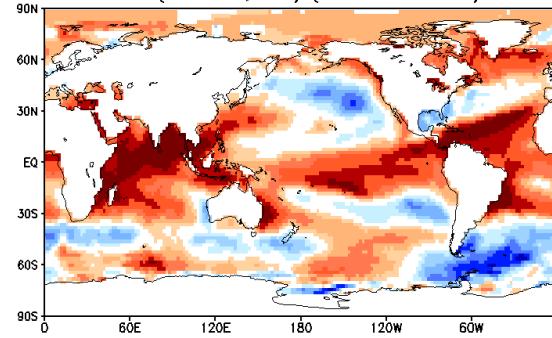

EOF of GPH(200mb) and the correlated SST anomaly pattern
'1981-2010)

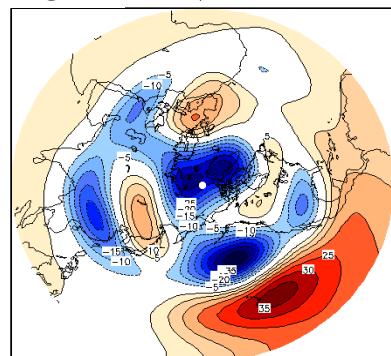

EOF1 Wet:81/10 29.8%

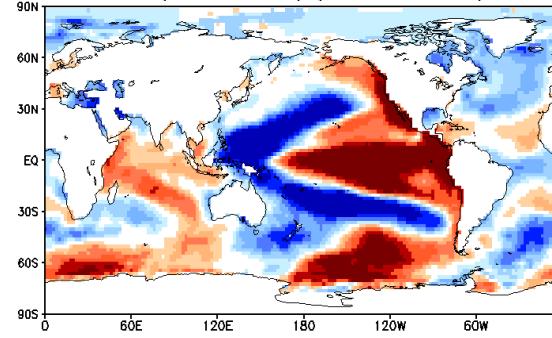

COR(PC1z200, SST) (Wet: 1981–2010)

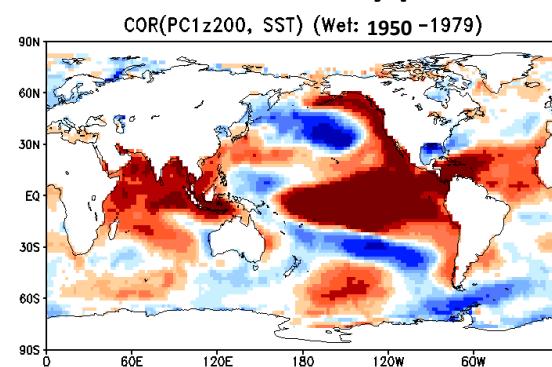

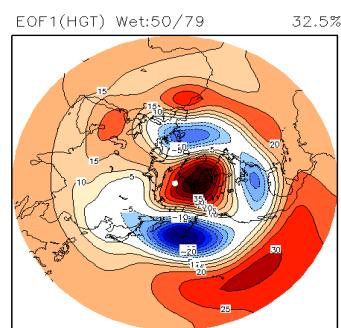

EOF2 Wet:81/10 21.5%

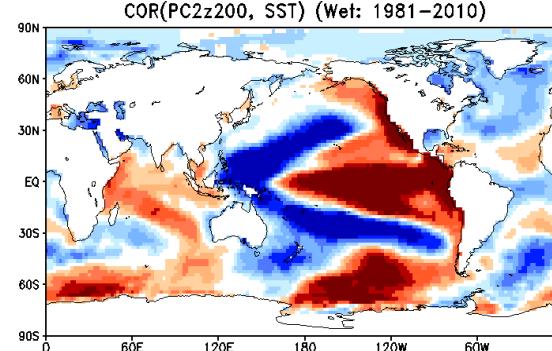

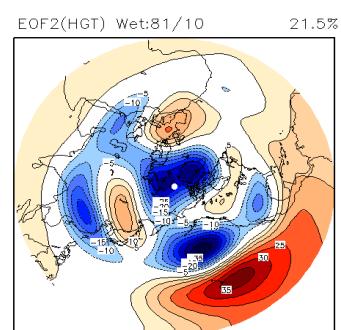

COR(PC2z200, SST) (Wet: 1981–2010)

EOF1 (1950-1979) and correlated SST anomaly pattern

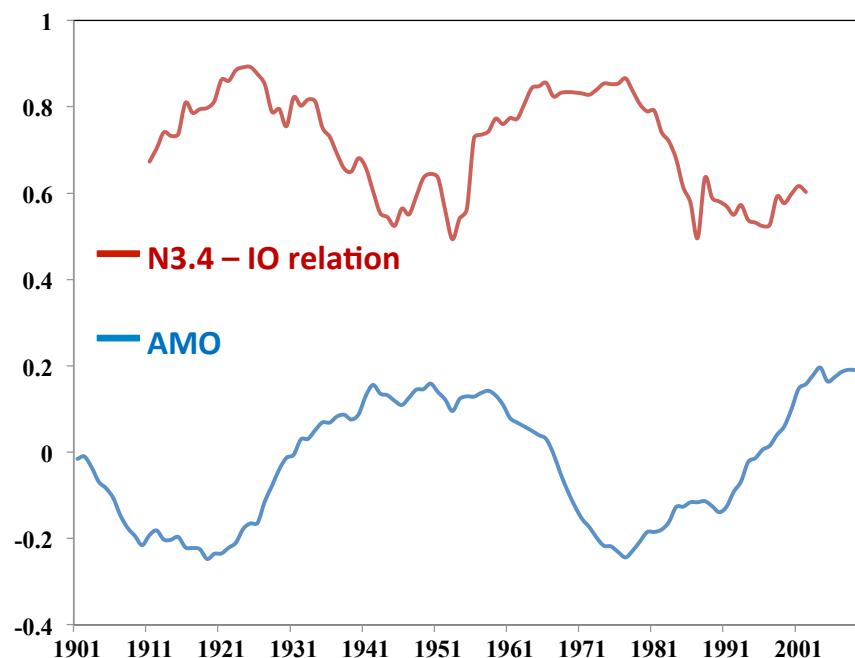

EOF2 (1981-2010) and correlated SST anomaly pattern

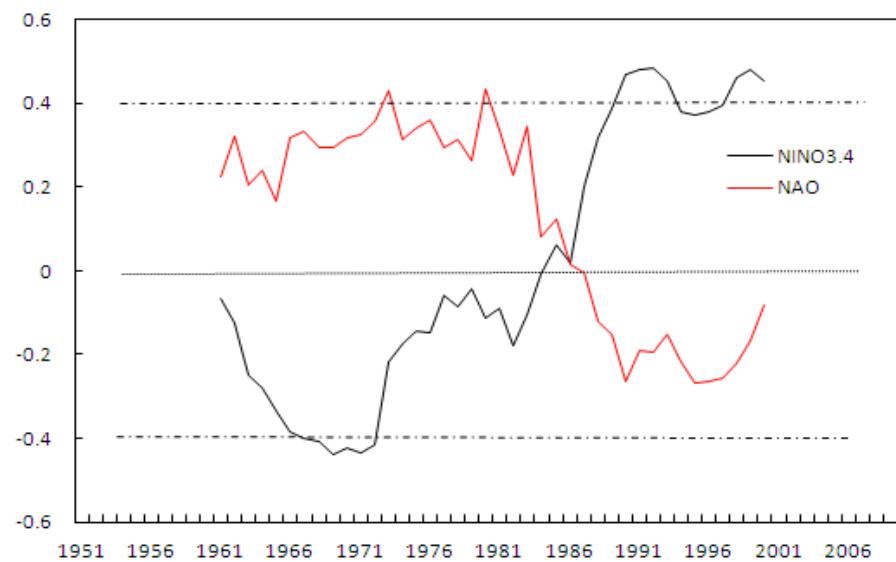

A possible reason

Atlantic influence?

AMO, NINO3.4-Indian Ocean (47E-110E, 15S-20N) Relationship

Sliding Correlation between NAO and AP Rainfall

Summary

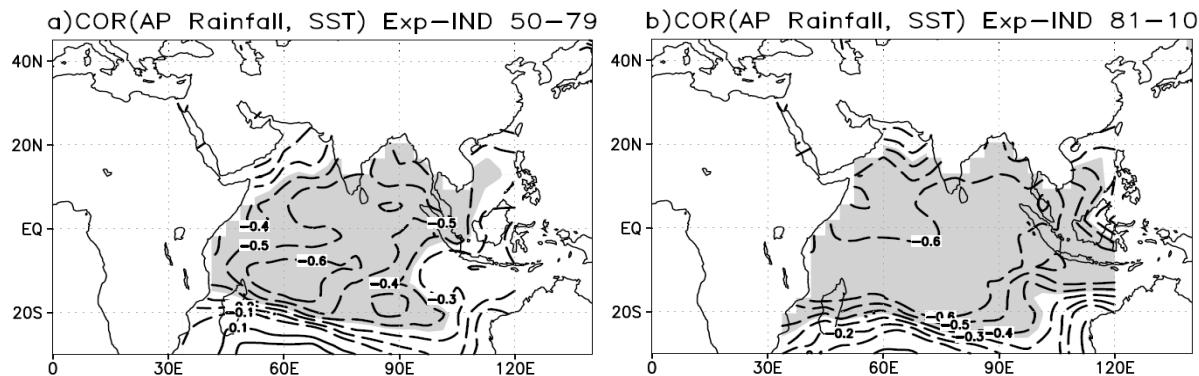

- ✓ Multidecadal variation of ENSO teleconnection to the AP precipitation is related to the change of global circulation mode associated with ENSO
- ✓ Differences in SSTA over the WP and IO.
- ✓ Possible influence of AMO on the change of ENSO teleconnection.

Thank you

AGCM simulation with the SST anomalies for the Indian Ocean only

Correlation maps between the simulated rainfall averaged over the AP region and the SST anomalies

Kang et al. (2015)

Factors for determining ENSO teleconnection in the South Asia

- Differences in SSTA over the western Pacific and Indian Ocean
- Positive SSTA over the IO \rightarrow Deepening of GH200 in SA \rightarrow - AP rainfall
- Negative SSTA over the WP \rightarrow Cyclonic C. in SA \rightarrow + AP rainfall
