

Mr Mladen Bogovac finished his postgraduate studies in experimental nuclear physics at Faculty of Science, University of Zagreb, Croatia in 1991 and continued with a career at the Laboratory for Nuclear reactions, Rudjer Boskovic Institute, Zagreb as a staff member and at Institut Nazionale di Fisica Nuclear Catania as external collaborator. His main field of interest was experimental study of low energy nuclear reactions with few particles in the final state using particle accelerators. He was involved in setup of detectors system including front end electronics and data acquisition. In 1998 he moved to the Laboratory for Ion Beam interactions (LIBI) at Rudjer Boskovic Institute where he worked as a technical associate responsible for nuclear instrumentation development and measurement automation. In 2010 he joined the IAEA as a Nuclear Instrumentation Specialist. He speaks Croatian and English.
