

National Commission of Atomic Energy

Comisión Nacional
de Energía Atómica

Orestes Olivera Marrero

What we do at CNEA?

-WORK FOR PEACEFUL USES OF NUCLEAR ENERGY.

What we do at the Capital Intellectual Section?

-“LEARNING BY DOING” FELLOWSHIPS: FOR TRAINING YOUNG PROFESSIONALS AND TECHNOLOGISTS AS A SOURCE FOR ITS OWN STAFFING NEEDS.

Learning by doing

Once trained, it is expected that most of them join the organization.

It also gives junior researchers the opportunities to undertake its PhD and allows a PhD to continue their training as a researcher and gain skills and experience.

**State of
data two
years ago**

Data was saved in .xlsx

This is a very unrecommended practice..

No data hub existed

Every year the new data overrided the previous one..

In summary data was a mess of excels.

Technologies to solve this and made use of data

Flask

web development,
one drop at a time

GraphQL

go the the system

How to implement Machine Learning in this case?

Making use of NLP with Sklearn.

How?

Creating a model of bag of words like the use for recommendations in imdb.

Why?

When a fellowship is requested the system checks if there's a similar theme. Also check for similar themes already being studied.

What does this give us?

Information to make decisions in real time. We can track the info about a topic. We can make the knowledge flow across the organization.

CONCLUSIONS

To create machine learning models you need to collect data.

Data it's all around the organization you need to go for it, find it and use it to improve processes. Change the culture towards sharing.
