Energy Modelling Platform - Joint Global Training School | (smr 3963)

Monday 12 August 2024

MAED Track: Energy demand assessment and scenarios: MAED and EBS tools - Kastler Lecture Hall (AGH) (09:00-17:00)

Participants and trainers will work hand-in-hand to develop and customize a MAED model for each country. The models should take into account custom data and assumptions that best reflect the current situation and/or goals in each country. At the end of this activity each participant should have a functinal model, which can be used to conduct demand analysis under various scenarios for their countries. Participants will prepare and run a handful of scenarios the results of which will be presented in a ppts/report session at the end of the workshop (August 22).
