

Wen Huang, Professor at the School of Mathematical Sciences, University of Science and Technology of China (USTC). He enrolled in the Department of Mathematics at USTC as an undergraduate in 1994 and received his Ph.D. in Science in 2003. His research focuses on topological dynamical systems and ergodic theory, with applications to number theory. In recent years, he and his collaborators have made progress in entropy and chaos theory, multiple recurrence and multiple ergodic theorems, invariants of zero-entropy systems, and Sarnak's conjecture. These works have been published in journals including Adv. Math, CMP, CPAM, JEMS and MAMS. He was granted the National Science Fund for Distinguished Young Scholars of China in 2012, received the Second Class National Natural Science Award, P.R. China (ranked second) in 2018, and the Shiing-Shen Chern Mathematics Award by the Chinese Mathematical Society in 2021.
