_____

Classical Molecular Dynamics for Nanosystems: LODiS Software"

Francesca BALETTO

King's College London KCL, Department of Physics, London, U.K.

Abstract:

After a review of molecular dynamics algorithms -including metadynamics-, we will discuss the peculiarity of nanosystems and how we can model them. A lab to practice with LoDiS-MD softwate (low dimensional system molecular dynamics) will follow. Melting and freezing transitions, example of growth models will be considered as examples.
