Conference: TMB-NET: Turbulent Mixing and Beyond - Non-Equilibrium Transport across the scales | (smr 3141)

Thursday 17 August 2017

- Leonardo Building - Euler Lecture Hall (14:00-16:21)

time	title	presenter
14:01	Physical characteristics determination of the products of the shock wave-induced surface destruction. Optoheterodyne Doppler measurements.	KURATOV SE
14:34	Ejecta produced by Richtmyer-Meshkov instability from free metal surfaces	EGOROVA MS
14:36	Stochastic model of turbulent mixing layer and its use for explanation of peculiarities of aerodynamic noise generated by turbulent jet	KOPIEV VF
15:01	Instabilities and mixing in internal waves attractors	SIBGATULLIN I
15:21	Interaction between shock wave and turbulent wake	INOKUMA K
15:41	Modeling of turbulent flow through the ejector of a two-stage ejector refrigeration system	ZIAEI-RAD M
16:01	Numerical investigation of turbulent flow through cooling channels of a PEM fuel cell with metal foam as flow distributor	SAEEDAN M
