

# BASICS OF DOCUMENTING YOUR CODE

## PART 01

ALI FARNUDI

دانشگاه صنعتی شریف

The Abdus Salam  
International Centre  
for Theoretical Physics

---

**BETTER DOCUMENTATION WILL MAKE  
YOUR PROJECT MORE SUCCESSFUL.**

# BETTER DOCUMENTATION WILL MAKE YOUR PROJECT MORE SUCCESSFUL.

---

Scientists  
write code  
for a project

after a couple of  
months/years

Write a  
thesis/report

Other group  
members will  
further develop it

Release the code  
to the scientific  
community

# BETTER DOCUMENTATION WILL MAKE YOUR PROJECT MORE SUCCESSFUL.

---

## MUCH SIMPLER CASE

You are working  
in a group

Other group  
members should  
understand what  
you are doing.

BETTER DOCUMENTATION WILL MAKE YOUR PROJECT MORE SUCCESSFUL.

---

Should you comment on every line?

# BETTER DOCUMENTATION WILL MAKE YOUR PROJECT MORE SUCCESSFUL.

---

## PROS

- ▶ Makes the code **less confusing**.
- ▶ Makes it **easier to remember** the next time we look at it.
- ▶ Notes and reminders for the algorithm.
- ▶ Bug fixes

Should you comment on every line?

# BETTER DOCUMENTATION WILL MAKE YOUR PROJECT MORE SUCCESSFUL.

---

## PROS

- ▶ Makes the code **less confusing**.
- ▶ Makes it **easier to remember** the next time we look at it.
- ▶ Notes and reminders for the algorithm.
- ▶ Bug fixes

## CONS

- ▶ Comments **quickly** become **obsolete** when we change the code.
- ▶ **Too much** comment can make your code **very confusing**.

# TIPS ON COMMENTING

---

- ▶ Use **self-explanatory variable names** and use **consistent capitalisation**
  - ▶ sample file 01
  - ▶ sample file 02
- ▶ Keep functions **short** (10-20 lines)
- ▶ **Don't** comment things that are **obvious**
  - ▶ (example: `list_a.append(1) #adding 1 to the list`)
- ▶ **Don't** comment **what** your code is doing
- ▶ **Only comment why** you did something

# WHAT ARE GOOD COMMENTS?

---

- ▶ Bug fixes that are related to the framework or structure of the problem you are solving.
- ▶ Why you chose to write a complicated algorithm (I could have used an array but I chose a recursive solution)
- ▶ **To-Do** comments, for example 'improvements'

# SO WHAT SHOULD I TAKE AWAY FROM THIS LECTURE?

---

- ▶ **Less comment**, is not a **bad** thing.
- ▶ comments are **dead**
- ▶ **Well defined variables, functions, and inputs.**

**'ALWAYS CODE AS IF THE GUY  
WHO ENDS UP **MAINTAINING**  
**YOUR CODE** WILL BE A **VIOLENT**  
**PSYCHOPATH** WHO **KNOWS**  
**WHERE YOU LIVE.'****
