

Convective organization at the largest scales:  
ITCZ, monsoonal precipitation zones and their link to the  
large-scale tropical circulation

# Observed distribution of precipitation

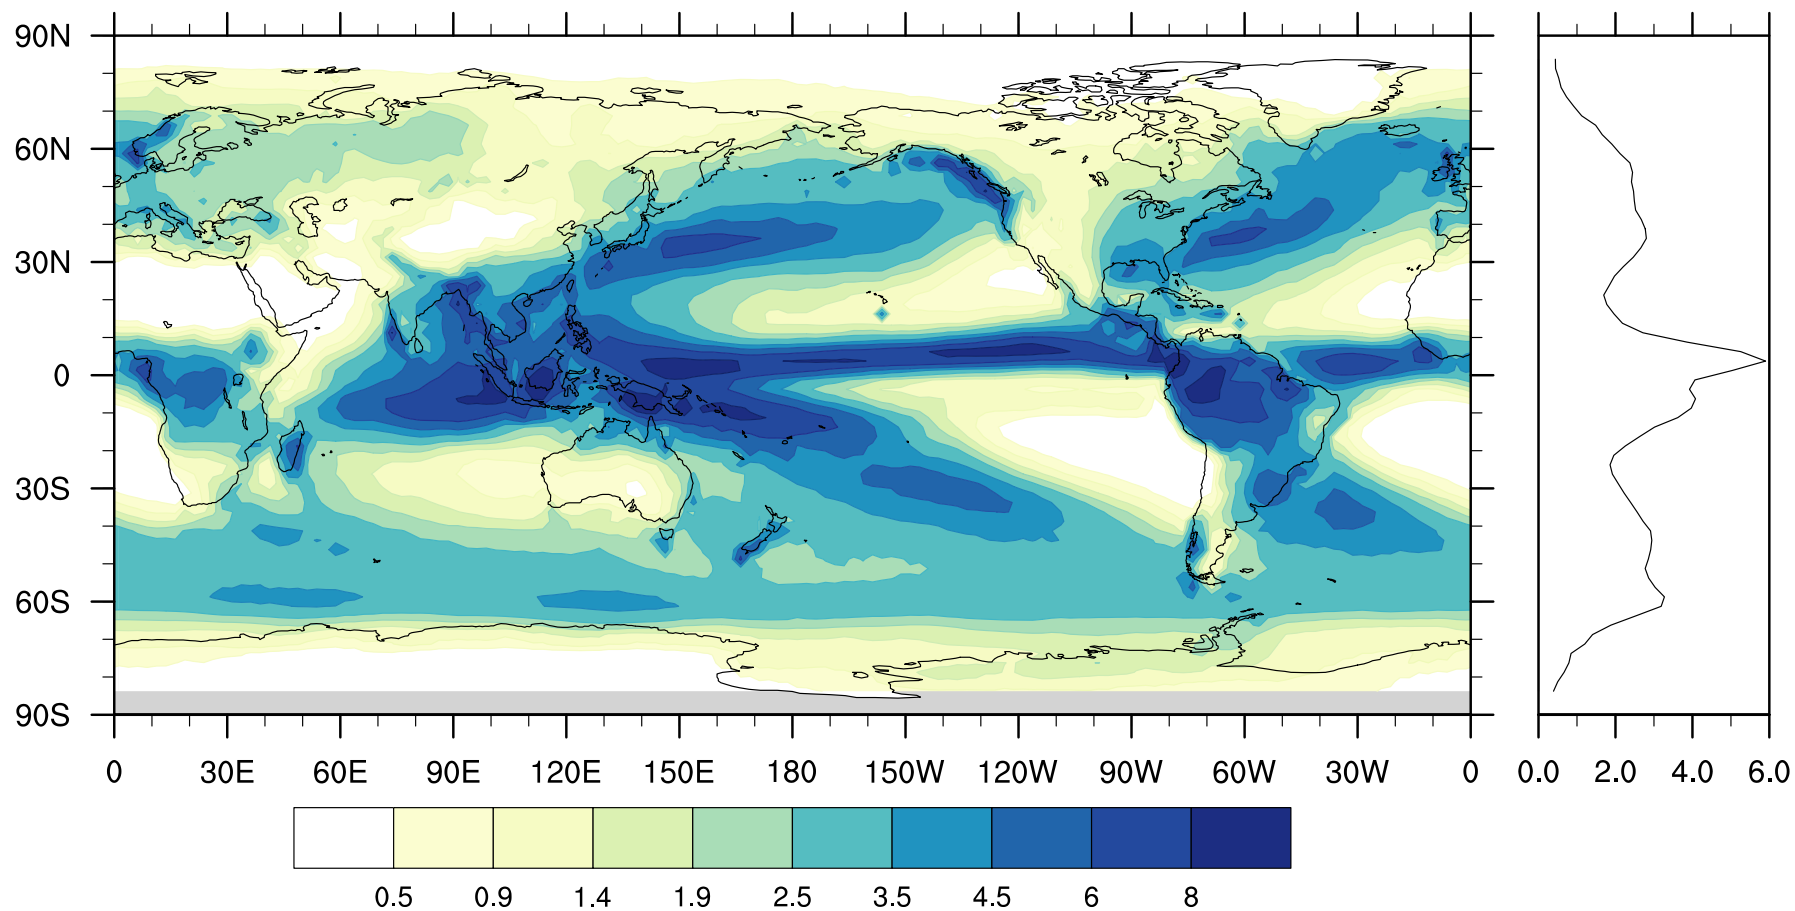

## Annual mean precipitation

Data source: GPCP

Why is the maximum precipitation (ITCZ) north of the equator?

# Precipitation is tied to the atmospheric circulation

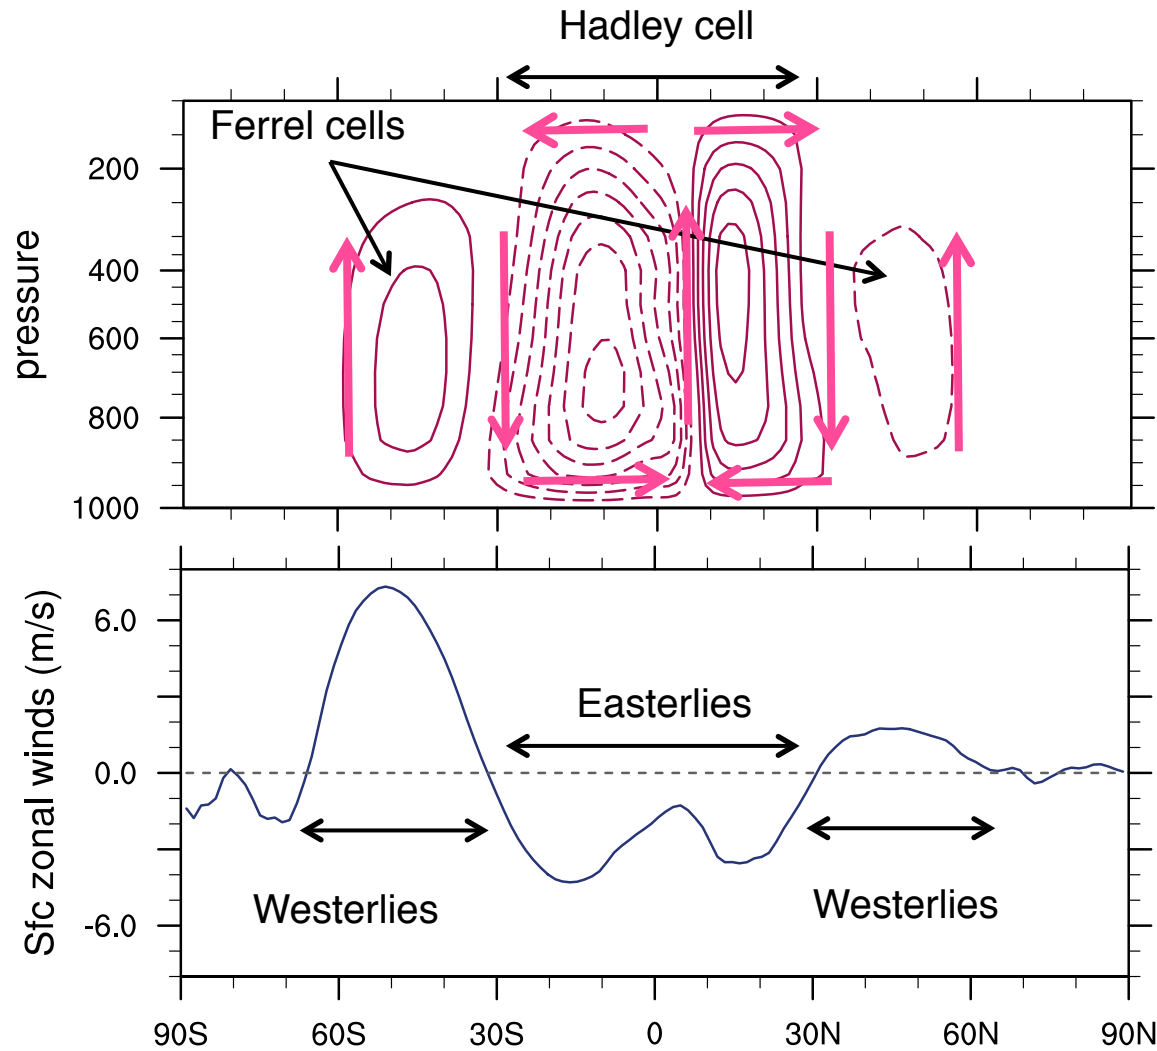

Data source: ERA40

# Precipitation is tied to the atmospheric circulation

# Precipitation is tied to the atmospheric circulation

Maximum precipitation is co-located with ascending motion in the Hadley cells

# Large-scale circulations and clouds

# What drives the Hadley circulation

# Implied poleward energy transport

# Atmospheric and oceanic energy transport

The general circulation of the atmosphere exists to transport energy from regions with net energy gain to regions of net energy loss

# The energy budget for a moist atmosphere

# The energy budget for a moist atmosphere

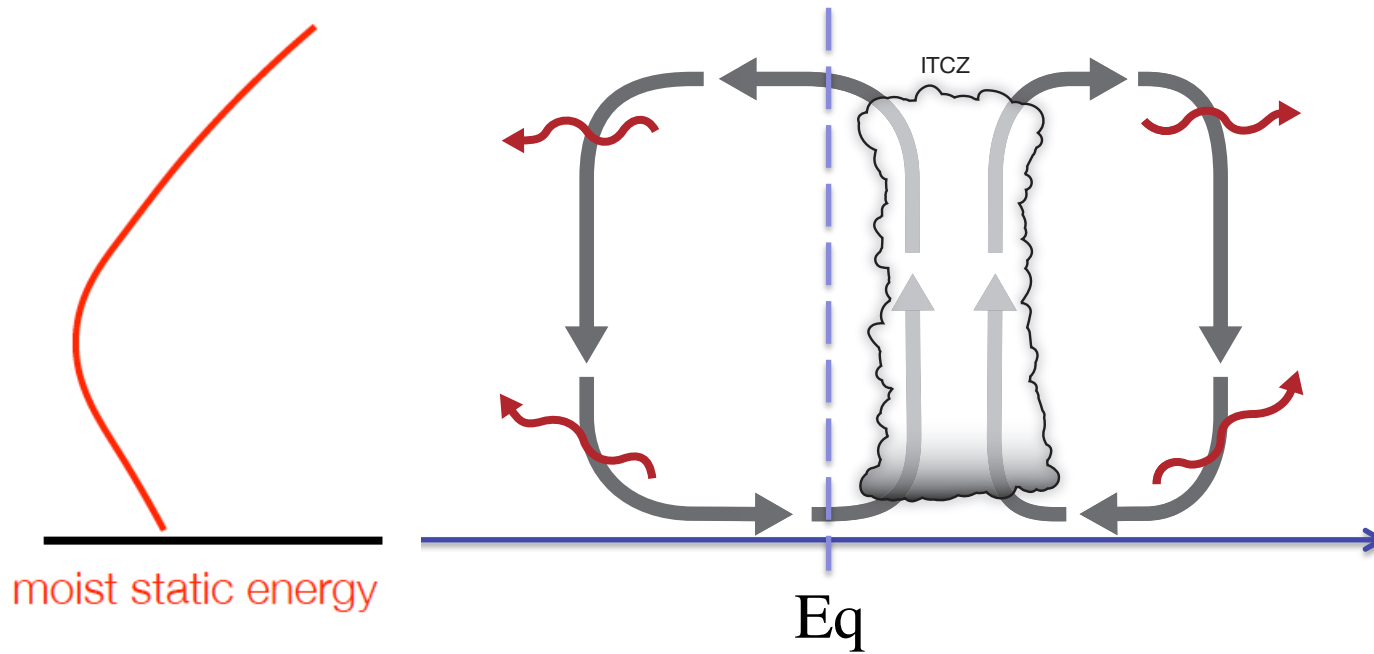

$$\partial_y \langle \overline{vh} \rangle = R - F_{\text{surf}} = F^{\text{net}}$$

$$h = C_p T + L_v q + gz$$

Relates the circulation to energy sources and sinks, without explicit consideration of latent heating

# Energetic constraint on Hadley cell

Adapted from Schneider et al. 2014

Because MSE is positively stratified, the Hadley cell usually transports energy in the direction of the upper-level flow

# Energetic constraint on Hadley cell

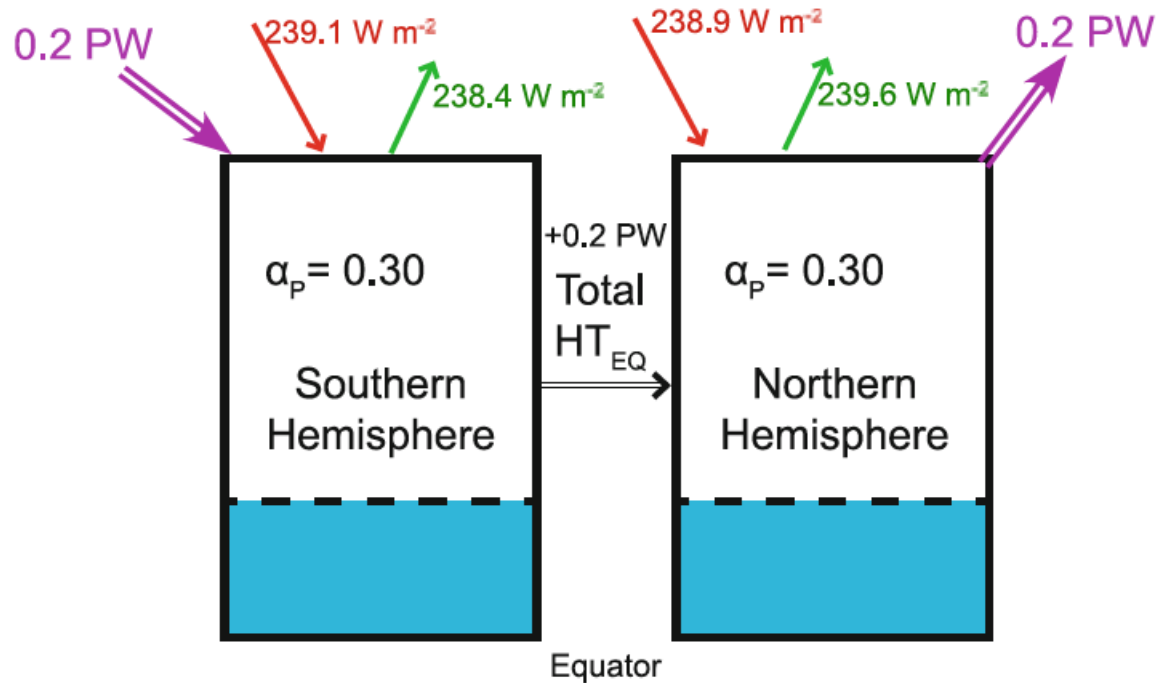

Adapted from Schneider et al. 2014

ITCZ position is anti-correlated with the cross-equatorial energy transport  $\langle \overline{vh} \rangle_0$

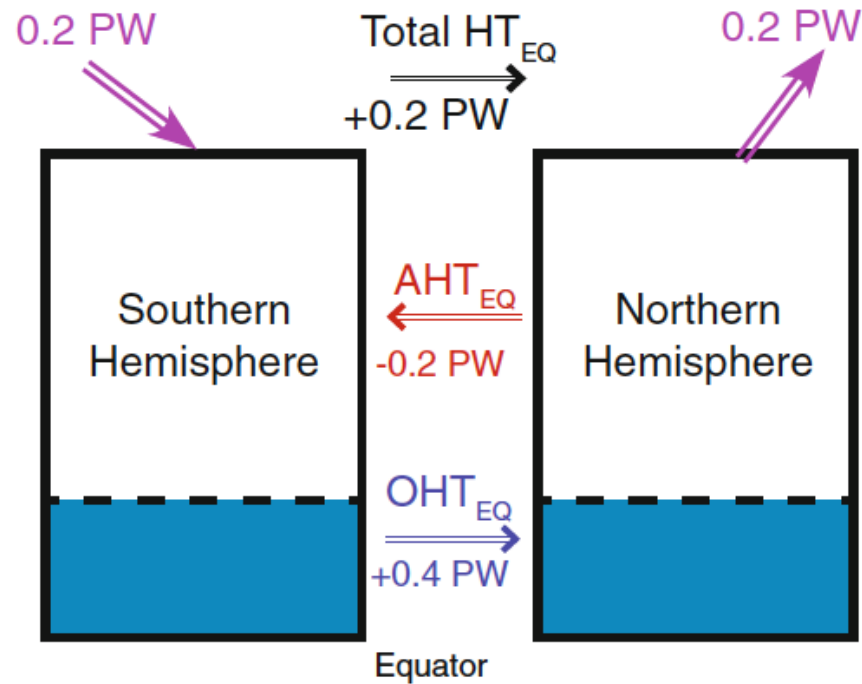

# What drives hemispheric asymmetry?

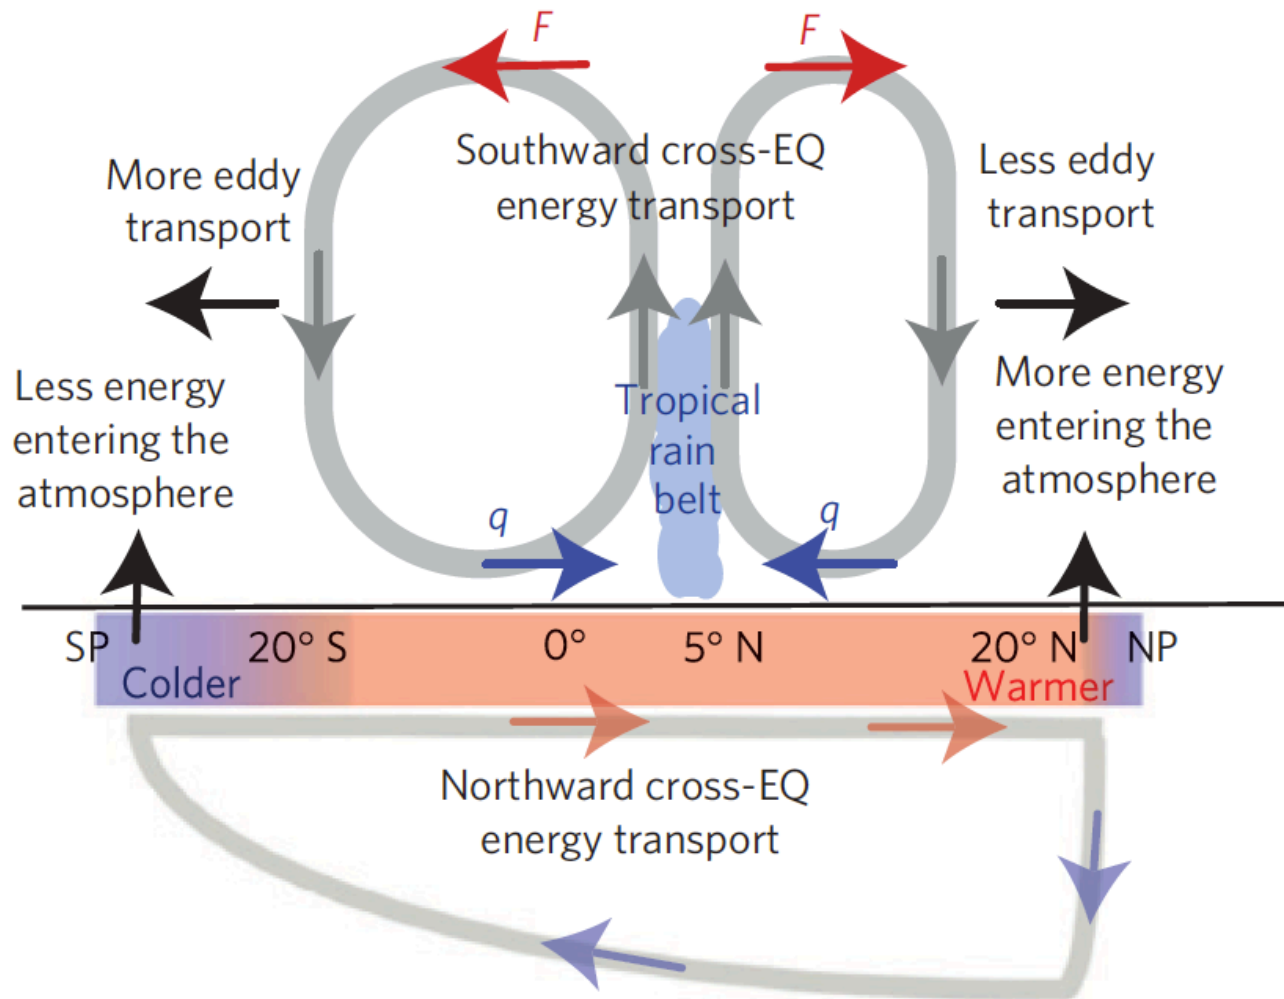

- ↘ Outgoing longwave radiation
- ↘ Net shortwave
- ↘ Net radiation at TOA

# Role of ocean heat transport

- ↘ Atmospheric Heat Transport ( $AHT_{EQ}$ )
- ↘ Ocean Heat Transport ( $OHT_{EQ}$ )
- ↘ Net radiation at TOA

# Mechanisms of northward shifted position of the ITCZ

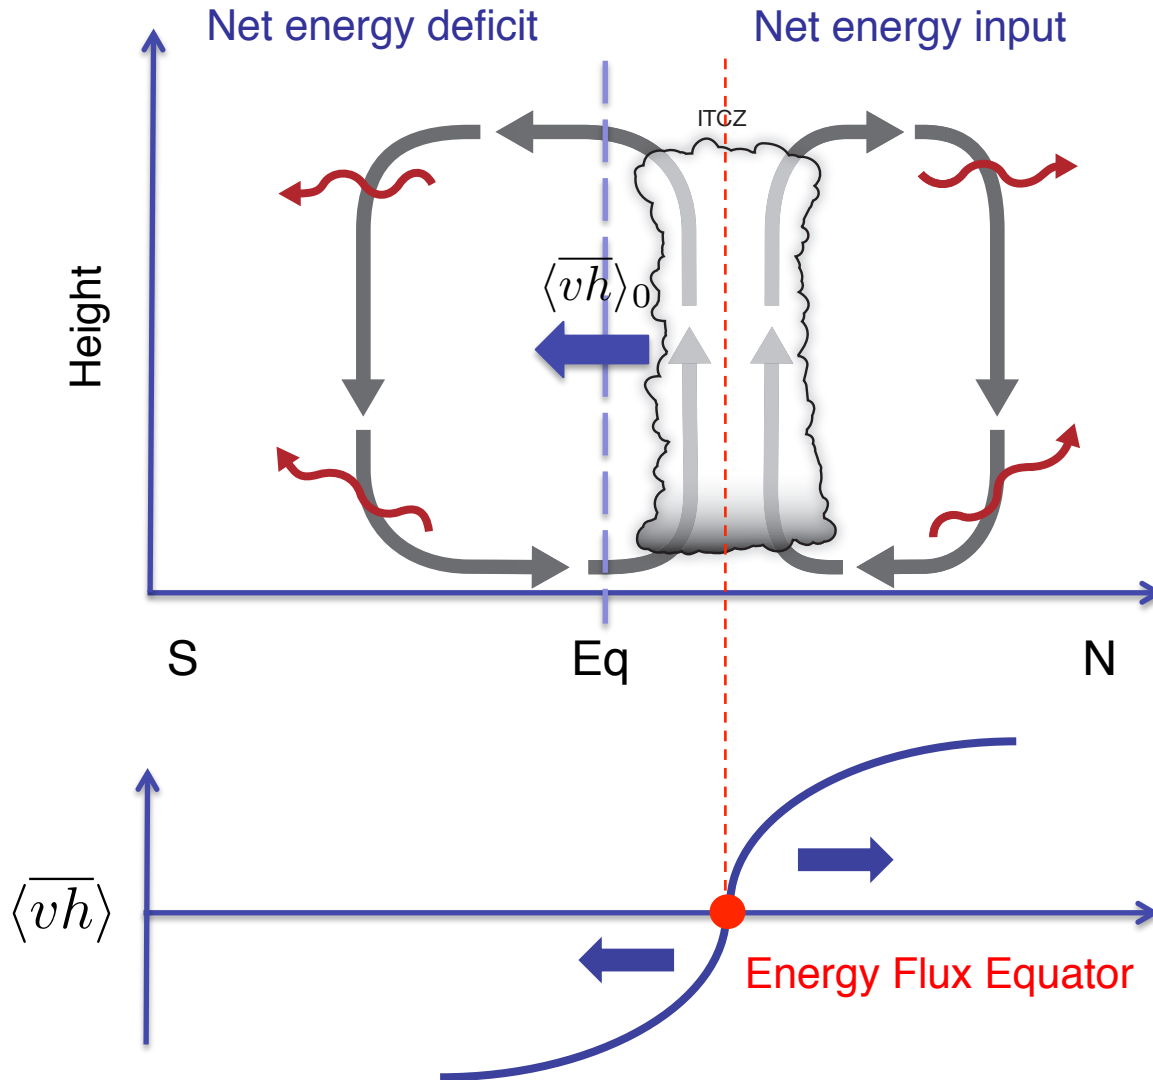

# Energetic constraint on Hadley cell

Adapted from Schneider et al. 2014

ITCZ position is anti-correlated with the cross-equatorial energy transport  $\langle \overline{vh} \rangle_0$

# ITCZ and EFE

# ITCZ and cross-equatorial energy transport

# Tropical rainbelts in climate models

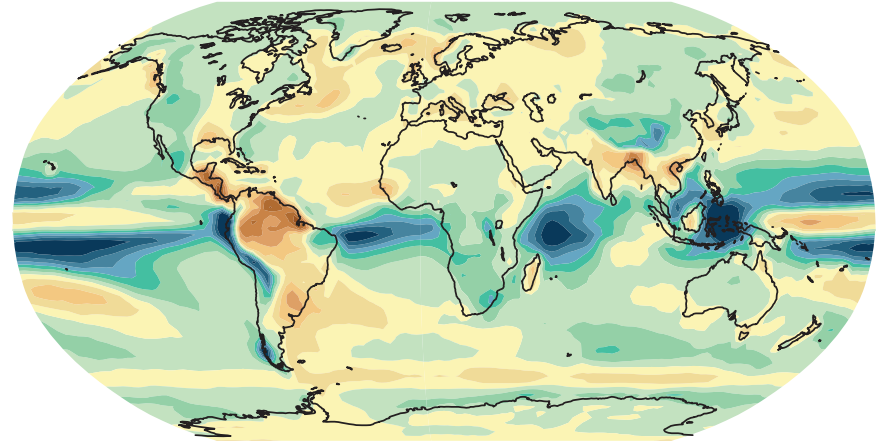

(a) Multi Model Mean Precipitation

(mm day<sup>-1</sup>)

(b) Multi Model Mean Bias

(mm day<sup>-1</sup>)
