#NuclideSpotlight
#History

95m- and 97-Techetium were discovered in 1937 during an investigation of irradiated cyclotron parts. Neither isotope occurs naturally, which made this the first study of synthetic elements produced by human beings.

National Nuclear Data Center @NNDC_BNL · Oct 20, 2021

#NuclideSpotlight

Gamma rays can be used to kill bacteria and extend the shelf-life of food products.

This process (called "food irradiation") commonly uses 60-Cobalt, which:

- has a long half-life
- emits high-intensity gamma rays
- does not easily dissolve into water

Nuclear Medicine

What can we use radioisotopes for in medicine?

Imaging

X-rays, gamma rays

Therapy

Alphas, betas, Auger electrons

Targeted Radionuclide Therapy

M. Sadeghi et al., J Can Res Ther 2010;6:239

- Ionizing radiation to kill cancer cells and shrink tumors
- Uses molecule labeled with radionuclide

Diagnostic Imaging with Radioisotopes

ex. 18O, 6He

☐ Reactions

Target:

[mass][symbol]
ex. 235U, 40Ca, 35Cl

Projectile:

4He, He-4, 2-he-4, a, alpha, 2004

☒ E_{lab} (MeV):

☐ Exit Channel:

g, nn, nn+p, 2nn+a, 2a+12c

Active Interrogation with Neutrons

Compact DT neutron generators

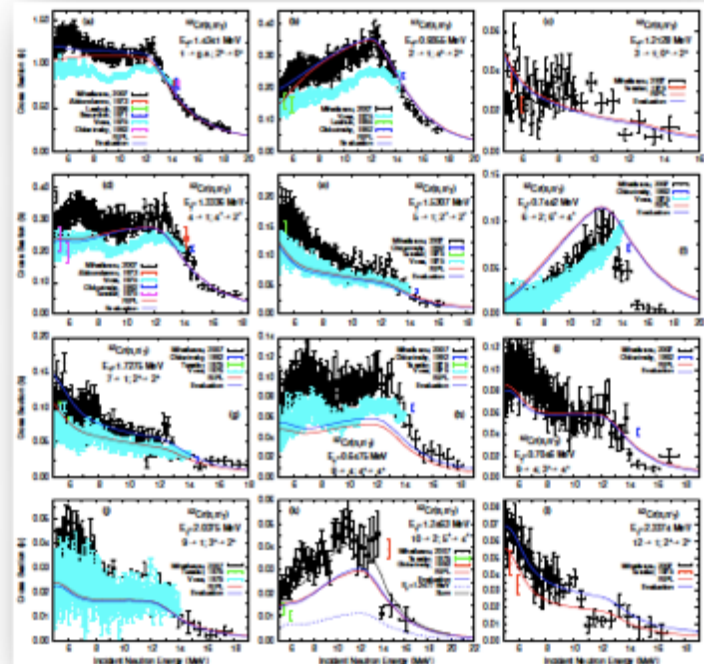

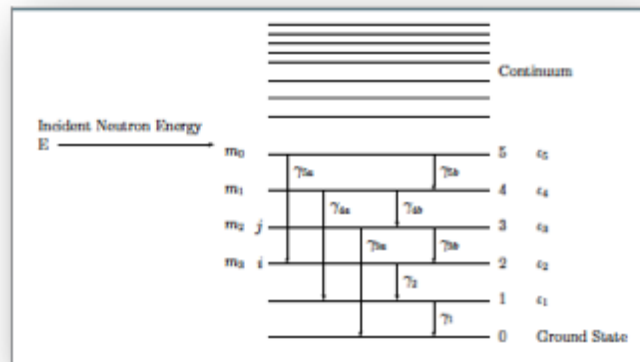

Use our Q-value calculator tool to find Q values for D+T and reaction products.

What energy of neutrons are produced?

What reactions happen when one shoots MeV-ish neutrons at something?

Inelastic reaction gammas

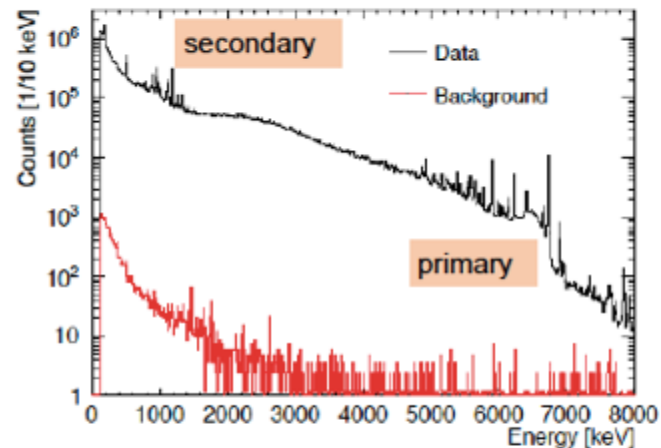

G. Nobre et al., Nucl. Data Sheets 173: 1-41 (2021)

Decay from inelastic state is

- Initially populated by compound reaction
- Cascade lower energy gammas
- Provides a unique fingerprint for each isotope

Thermal neutron capture gammas

K. Hagiwara et al., Prog Theor. Exp. Phys. 0000, 2015

Decay from capture state is

- First high energy gammas - primary
- Followed by lower energy gammas –secondary
- Provides a unique fingerprint for each isotope

What's in the box?

Use a combination of

- Traditional x-rays
- Active neutron interrogation
- NRF

Complete characterization in few minutes

Some additional applications

* Images taken from www.nasa.gov, and from Unzueta's, and Mauborgne's talks in WANDA 2020

Dragonfly mission to Saturn's moon Titan

• Gamma-ray detection system

- Thermal neutron capture (TNC)
- Inelastic Scattering (INS)

Oil well characterization (Schlumberger)

- Characterization of materials rely on measuring neutron-induced gammas
- These depend on:
 - Precise and thorough experimental knowledge
 - Incorporation of data into evaluated files
 - Proper handling through transport codes, so that information is not lost

CapGam Web Application –

Thermal Neutron Capture γ 's (CapGam)

Last Updated 12/10/2019 12:20:50

[About CapGam](#) [CapGam by Energy](#) [CapGam by Target](#)

The energy and photon intensity with uncertainties of gamma rays as seen in thermal-neutron capture are presented in two tables, one in ascending order of gamma energy and a second organized by Z , A of the target. In the energy-ordered table the three strongest transitions are indicated in each case. The nuclide given is the target nucleus in the capture reaction. The gamma energies given are in keV. The gamma intensities given are relative to 100 for the strongest transition. %I γ (per 100 n-captures) for the strongest transition is given, where known.

All data are taken from [Evaluated Nuclear Structure Data](#) and [eXperimental Nuclear Structure Data](#) by the National Nuclear Data Center, Brookhaven Data Program and [Nuclear Structure and Decay Data](#) from the [Nuclear Data Sheets](#), Elsevier. The data for this research was supported by the Office of Energy.

Weird sterile neutrinos may not exist, suggest new data from nuclear reactors

By Adrian Cho | Apr. 6, 2017, 5:30 PM

Antineutrinos from a reactor are a really hot topic

University of California - Lawrence Berkeley National Laboratory

Sterile neutrino search hits roadblock at reactors

03/04/17 | By Kathryn Jensen

A new result from the Daya Bay collaboration reveals both limitations and strengths of experiments studying antineutrinos at nuclear reactors.

The Neutrino Hypothesis (1930's)

14N STABLE 99.636%	15N STABLE 0.364%
13C STABLE 1.07%	14C 5700 Y β^- : 100.00%

Energy conservation:
Electron Energy = Mass (i) - Mass (f)

Observation: ...I have hit upon a desperate remedy to save the "exchange theorem" and the **energy theorem**. Namely [there is] the possibility that there could exist in the nuclei electrically **neutral particles** that I wish to call neutrons...

(4 December 1930, Zürich)

Dear radioactive ladies and gentlemen:

The ghost particle

Antineutrinos are produced in beta decay

How do you measure something
with no electrical charge interacting
only through weak interaction?

Bethe-Peierls (1934) – detection through **inverse beta decay**

The problem: cross section for reaction is $\sim 10^{-44} \text{ cm}^2$!!!

That's 10^{-20} barns !!!

The chances of a neutrino actually hitting something as
it travels through all this howling emptiness are roughly
comparable to that of dropping a ball bearing at random
from a cruising 747 and hitting, say, an egg sandwich”

1 light year

Ghostbusting with Probability

How to detect the ghost particle ?

And some nuclear physics !

Nuclear Physics Powering a Reactor

- Fissile material, such as uranium or plutonium
- Neutrons are used to induce fission
- Products of fission : 2 lighter nuclei and a few neutrons
- New neutrons carry on, and on, and on the process

Yields of Fission Fragments

↑ Z, number of protons

An excess of measured antineutrinos relative to predictions

Back to Nuclear Power

AGM reactor flux at Earth's surface – Nature 2015

Active and exciting developments worldwide

Many efforts

- USA
- Canada
- Japan
- France
- Brazil
- Italy
- UK
- Korea

Exploit differences in signal

Can be used in non-proliferation and reactor monitoring
Advantages : Non-intrusive, “real-time” measurements

Watchman experiment

The New York Times

*How to Spot a Nuclear Bomb
Program? Look for Ghostly Particles*

The Boulby mine in northeast England will be home to the Watchman experiment, which aims to

- Collaboration between UK and USA
- Demonstrate sensitivity to fuel at 10's of k distance
- First results expected 2024

Applications of Nuclear Data

Nuclear Medicine

How can I produce and use radioactive isotopes in the body?

Nuclear Power

Is there new physics beyond the standard model and can we make the world safer?

Stockpile Stewardship

How do you ensure something will work after decades on the shelf?

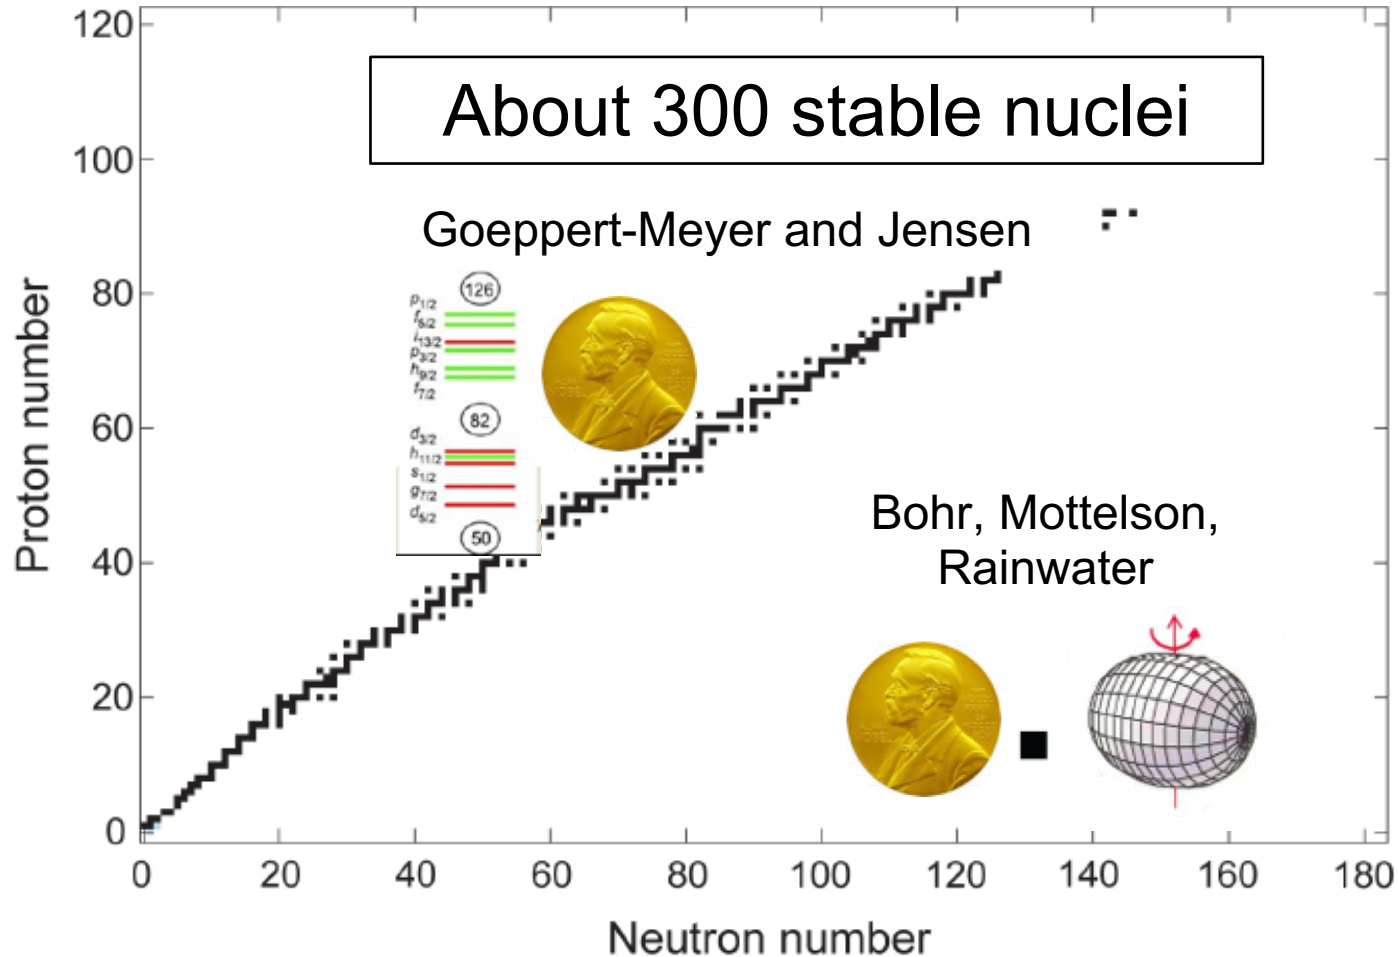

Homeland Security

How do I determine what's in something I can't see or touch?

Space Exploration

About 300 stable nuclei

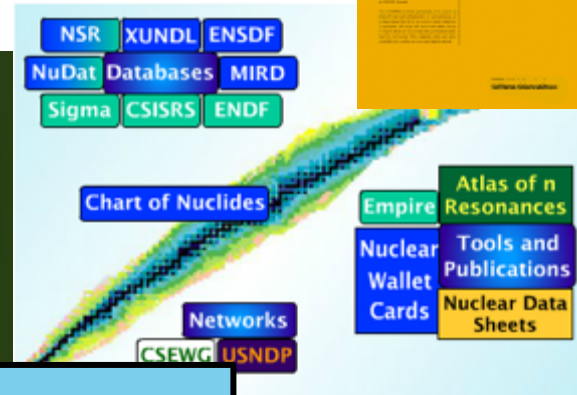

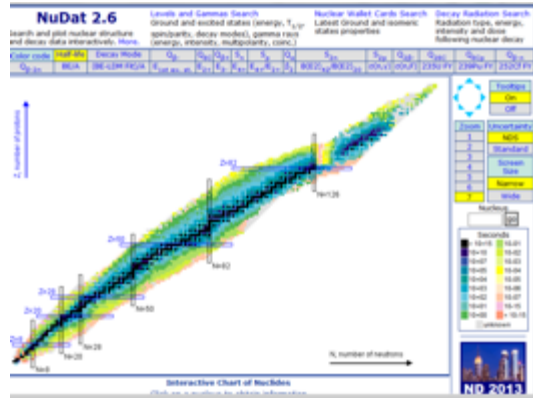

More than 3,400 have
been produced

6000-8000 are predicted

Take away message

Main thing to take away from this talk

- We work for YOU!!
- Comments/suggestions/criticisms are welcome
- You (should) shape the future of nuclear data
