OUTLINE

01 Introduction

and Motivation of present study

03 Case Studies

Test cases in the study region

02 Applied techniques

ROTI Maps and Stratification
through Clustering

04 Summary

01 INTRODUCTION

Ionospheric perturbations -> major issue in GNSS

GNSS signals provide valuable information about ionospheric variability and SW phenomena

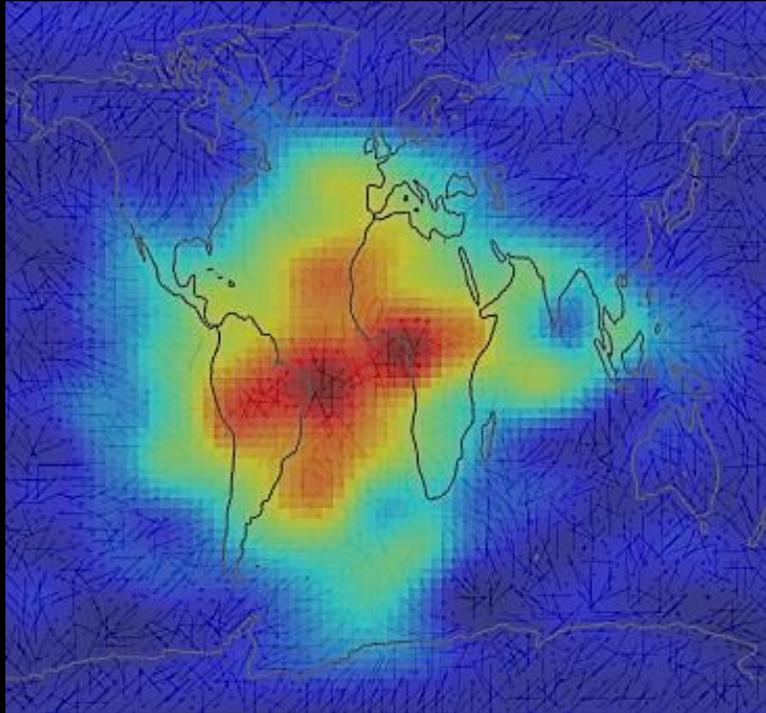

MOTIVATION

Investigation of an indicator of ionospheric temporal fluctuations to characterize and monitoring a region

Use of data derived from GNSS stations

Use of a sampling technique

02

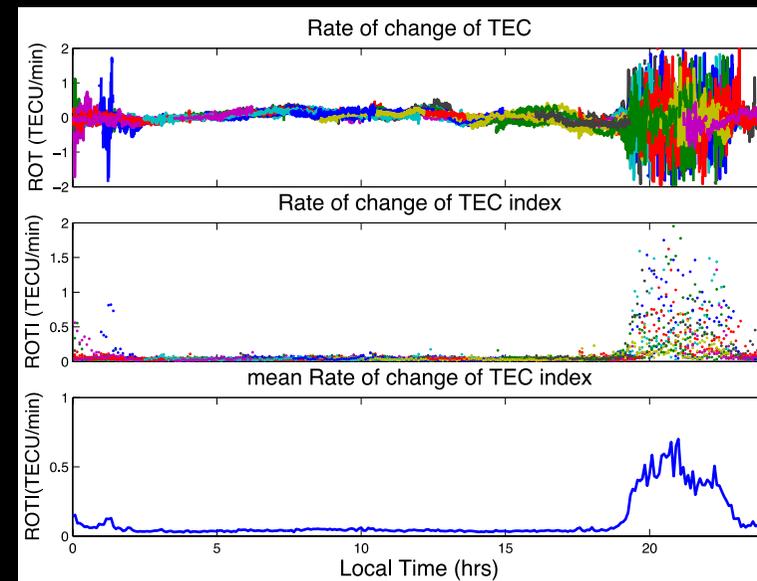

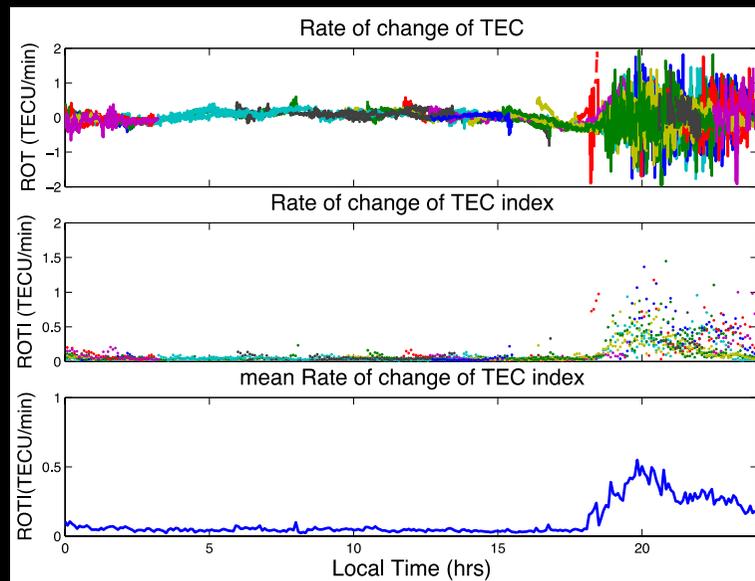

APPLIED TECHNIQUES

ROTI maps, Kriging and Stratification

ROT and ROTI

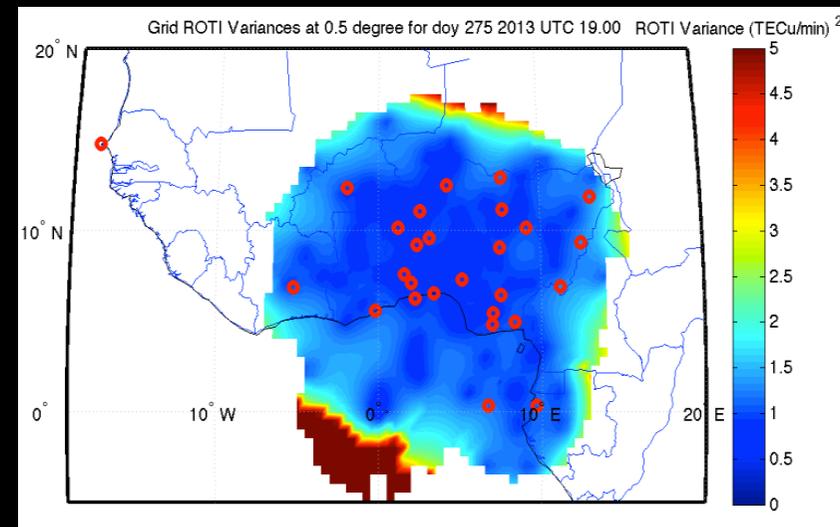

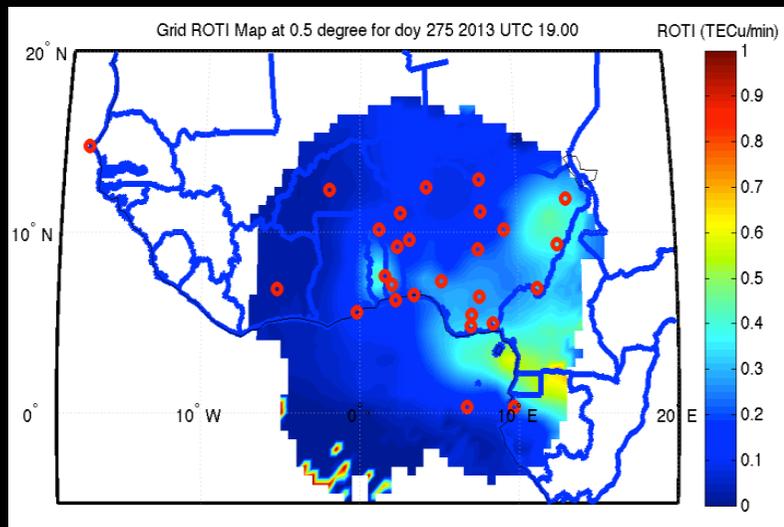

$$ROT = \frac{sTEC_k^i - sTEC_{k-1}^i}{t_k - t_{k-1}}$$

$$ROTI = \sqrt{\langle ROT^2 \rangle - \langle ROT \rangle^2}$$

Ionosphere Irregularities during Disturbed Condition of October 2nd, 2013
in West African stations: (left) futy; (right) nklg.

Spatial Interpolation: ROTI Maps

Regional ROTI maps and variance maps after Ordinary Kriging during a geomagnetic disturbed day DOY 275 with presence of irregularities

Blanch, 2002

Spatial Sampling: Clustering

So far most of the indices and spatial means of TEC and ROTI maps have been done through regular grids

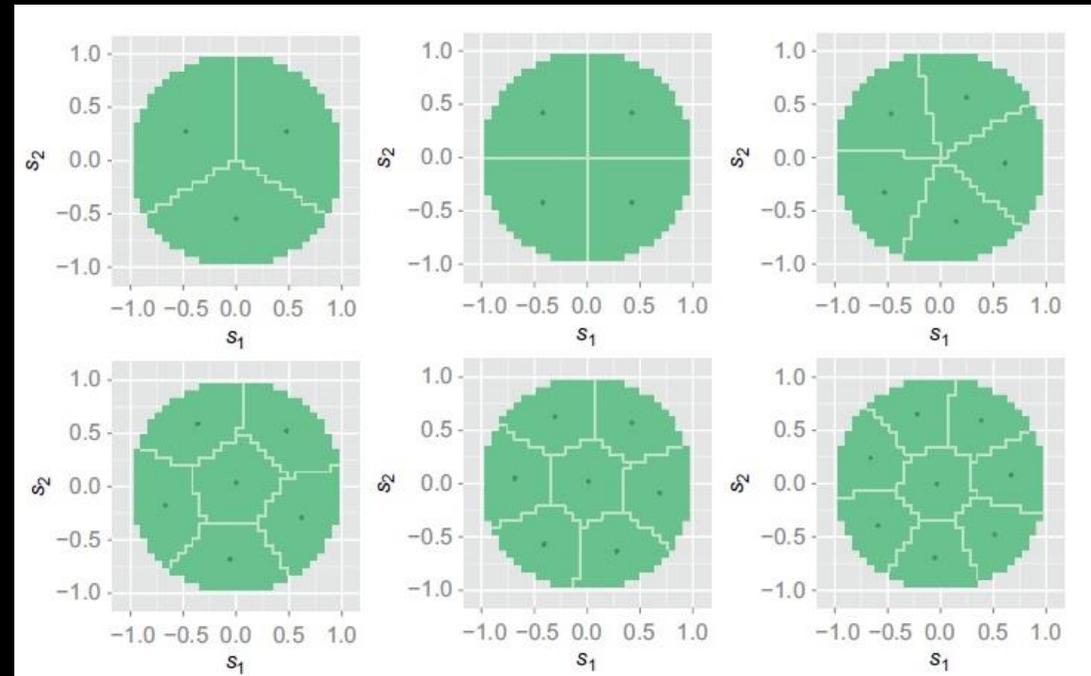

However, an irregular pattern is expected to lead to a more precise spatial mean (Cochran, 1977).

Clustering is the task of grouping a set of objects in such a way that objects in the same group (**cluster**) are more similar (in some sense) to each other than to those in other groups

k-means

$$MSSD = \frac{1}{N} \sum \min_j (D_{ij}^2)$$

Walvoort et al, 2009

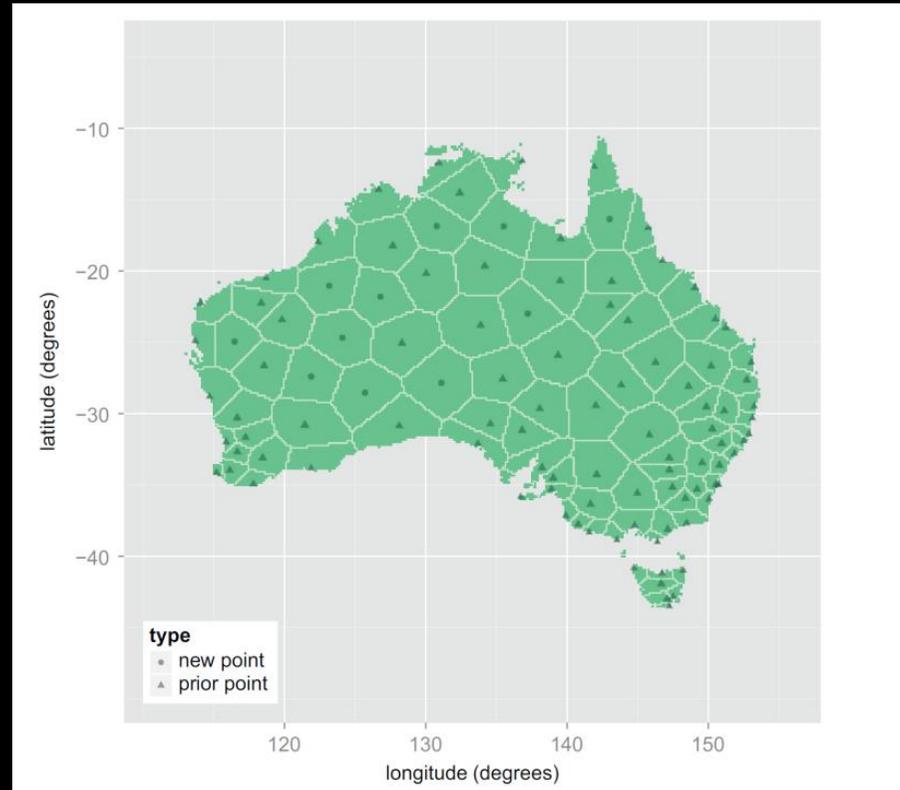

Examples of spatial coverage samples to estimate spatial means of circular shaped region

Spatial Sampling: Clustering

Centroid-Clustering or
Partition Clustering

k-means

Spatial infill sample of new climate stations. Existing climate stations (94) are part of the Australian Reference Climate Station (RCS) network.

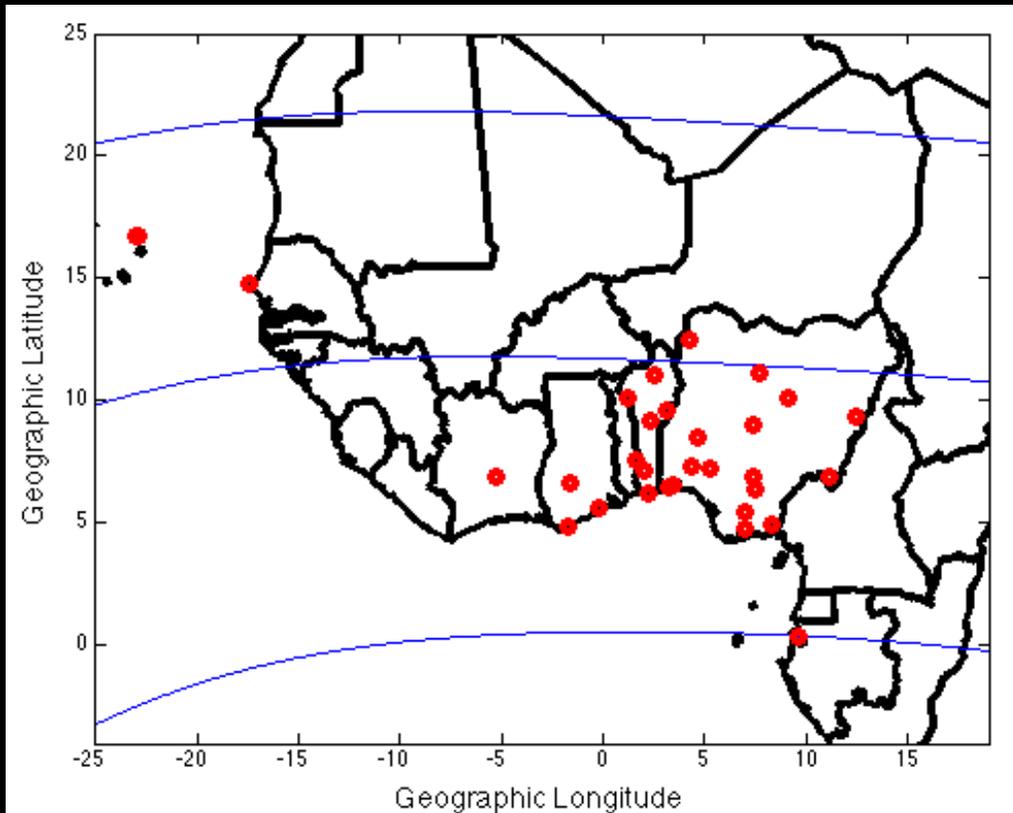

Walvoort et al, 2009

03 CASE STUDIES

STUDY REGION

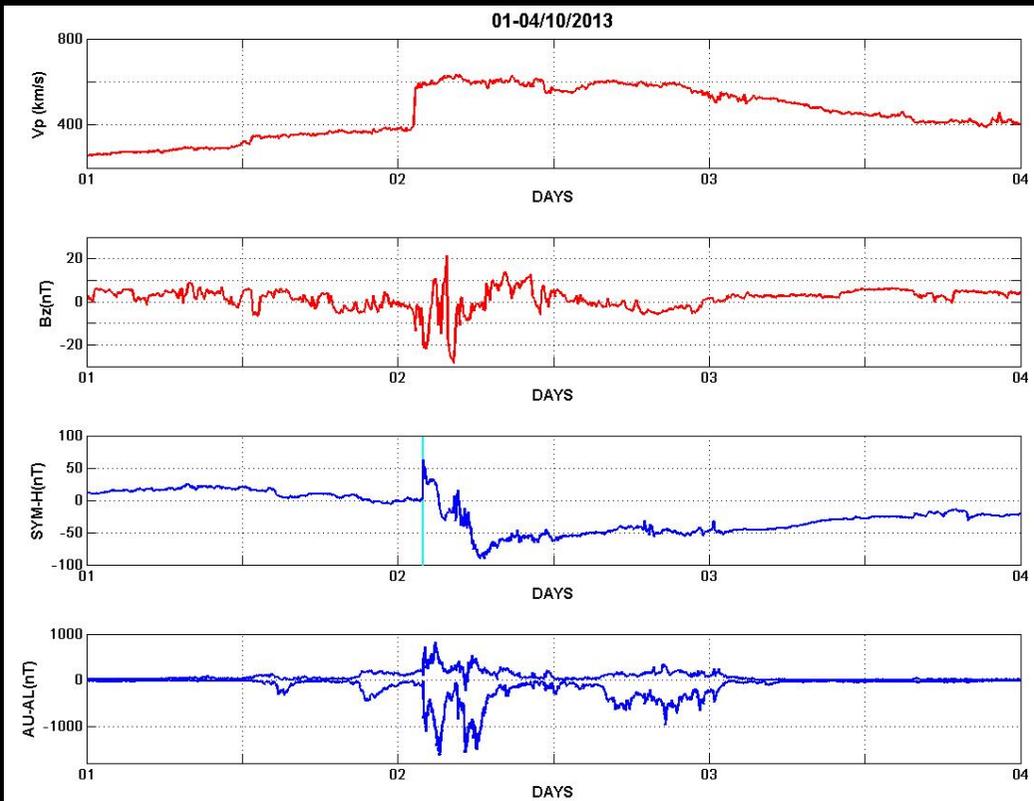

© STUDY REGION

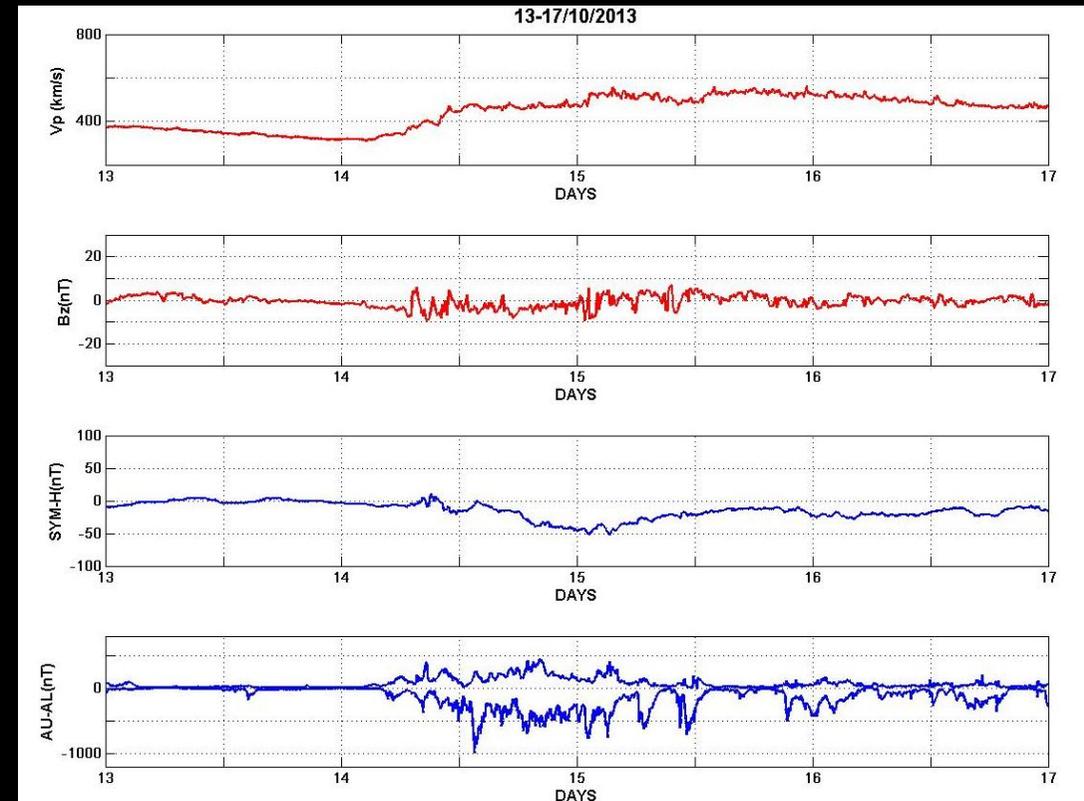

GNSS stations used in the study were located in the Western Sub Saharan African region.

Case Studies

After an analysis of available data and geomagnetic events, disturbed days **2nd** and **14th Oct 2013** (days 275 and 287) have been selected.

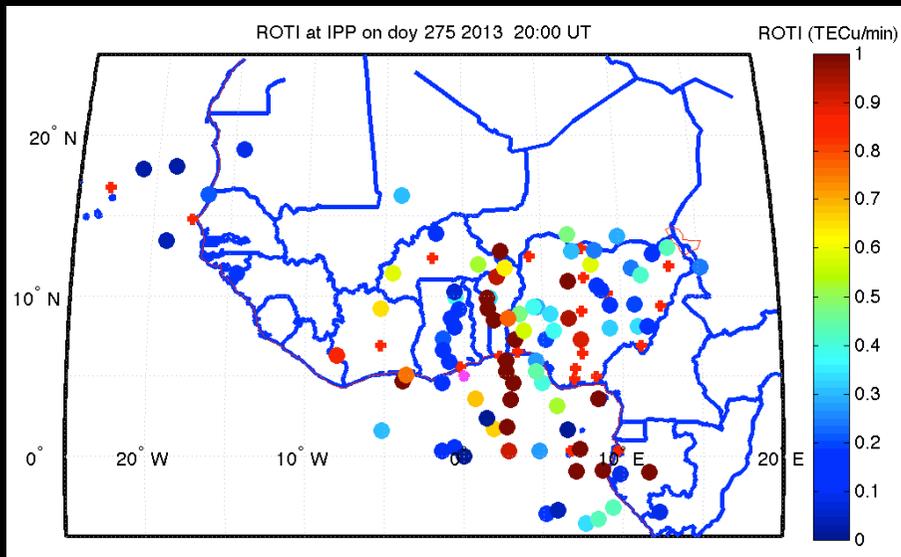

CME impacting the Earth in the early morning on October 2nd at 01.55UT.

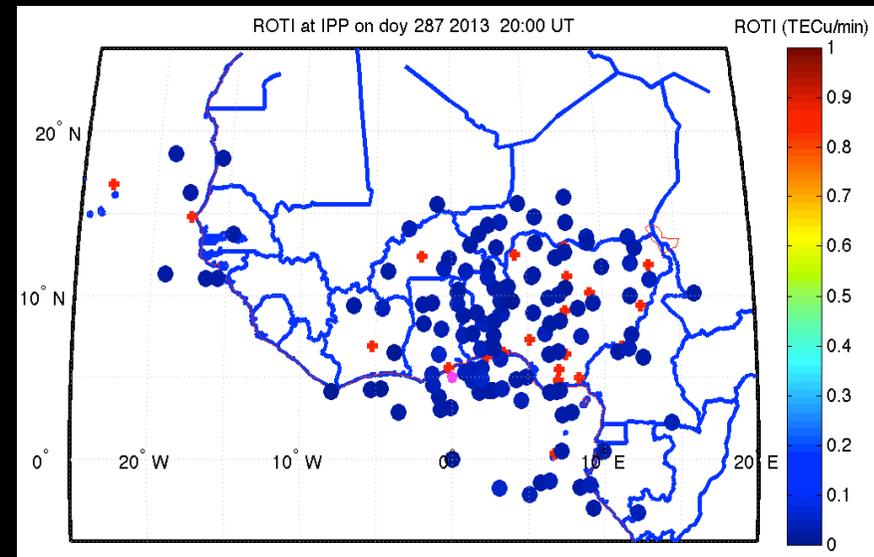

CME and HSSW arrival associated to a coronal hole on 14 Oct 2013.

Test Cases: ROTI

ROTI values at the available GNSS stations pierce points

Day 275 year 2013 with irregularities

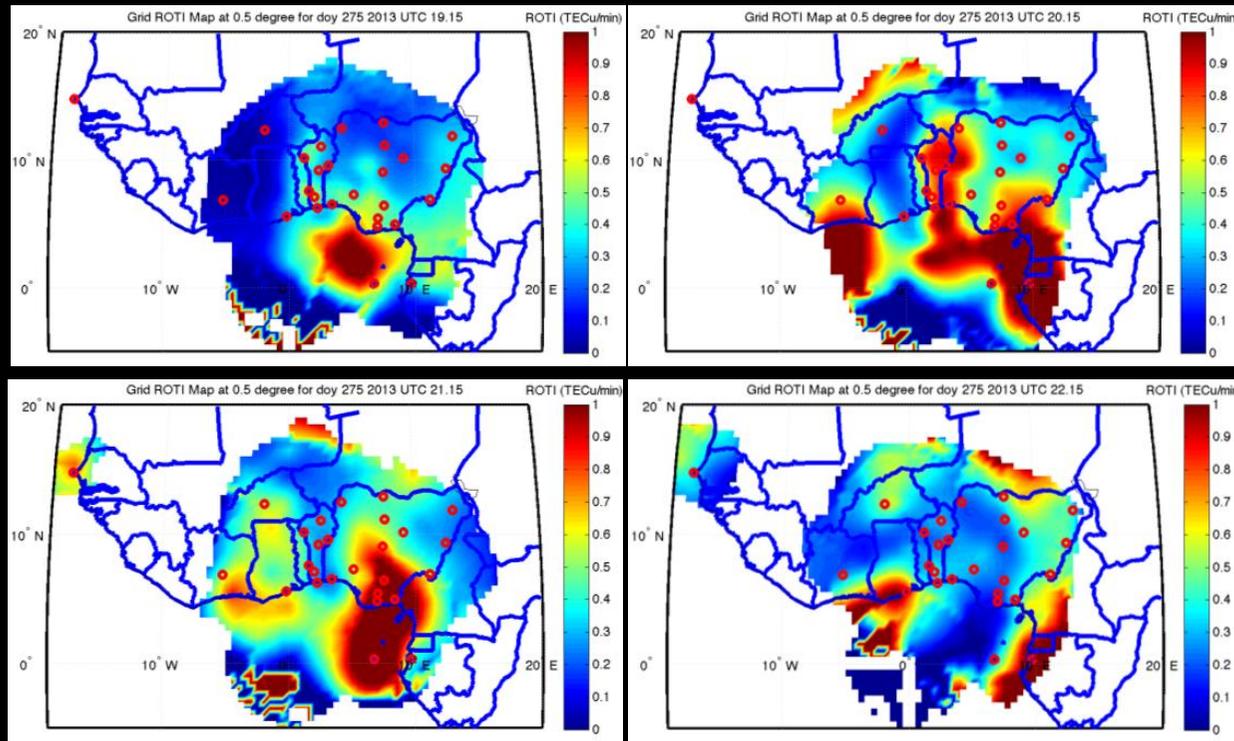

Day 287 year 2013 with inhibitions of irregularities

Test Cases: ROTI maps

After applying an **Ordinary Kriging interpolation** technique, a series of regional grid maps with spacing 0.5 x 0.5 degrees in latitude and longitude have been generated during the hours after the PRE, that is after 18 UT every 5 minutes.

Day 275

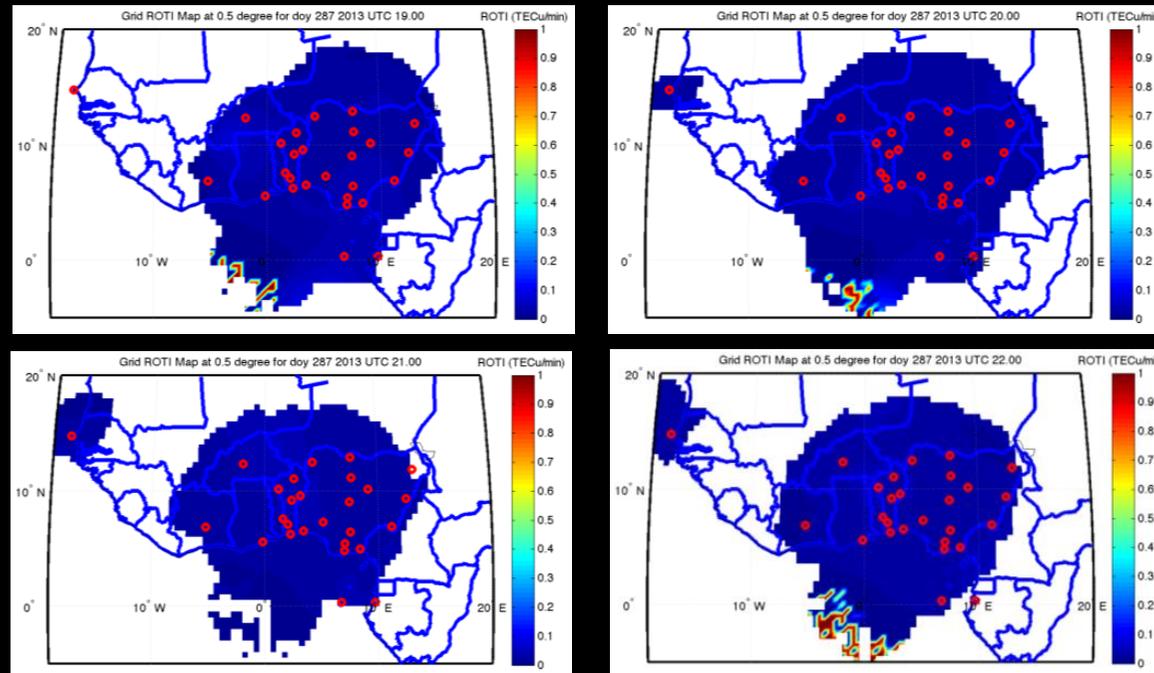

ROTI interpolated Maps for Day 275

Test Cases: ROTI maps

After applying an **Ordinary Kriging interpolation** technique, a series of regional grid maps with spacing 0.5 x 0.5 degrees in latitude and longitude have been generated during the hours after the PRE, that is after 18 UT every 5 minutes.

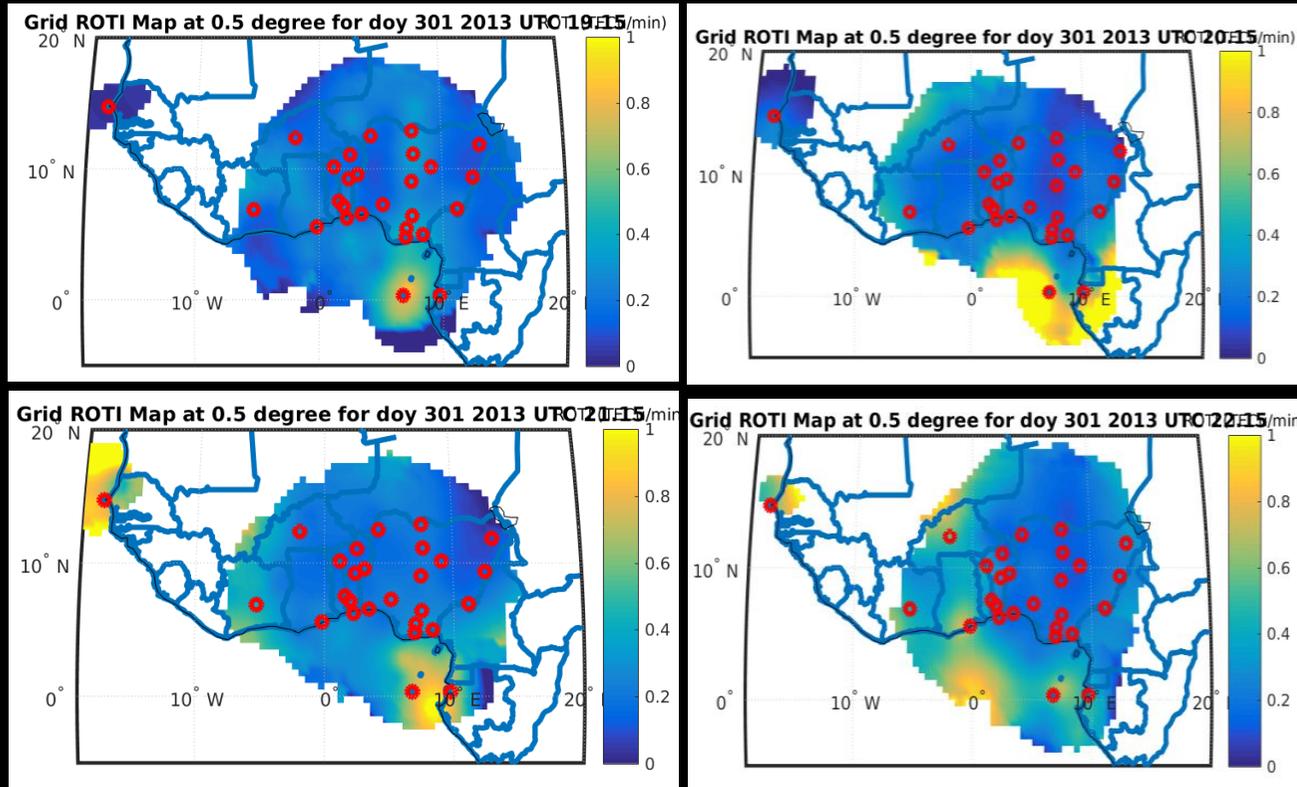

Day 287

ROTI interpolated Maps for Day 287

Test Cases: ROTI maps

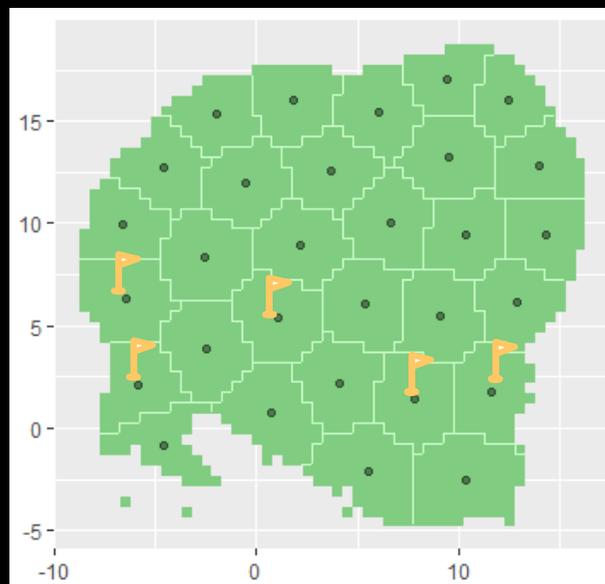

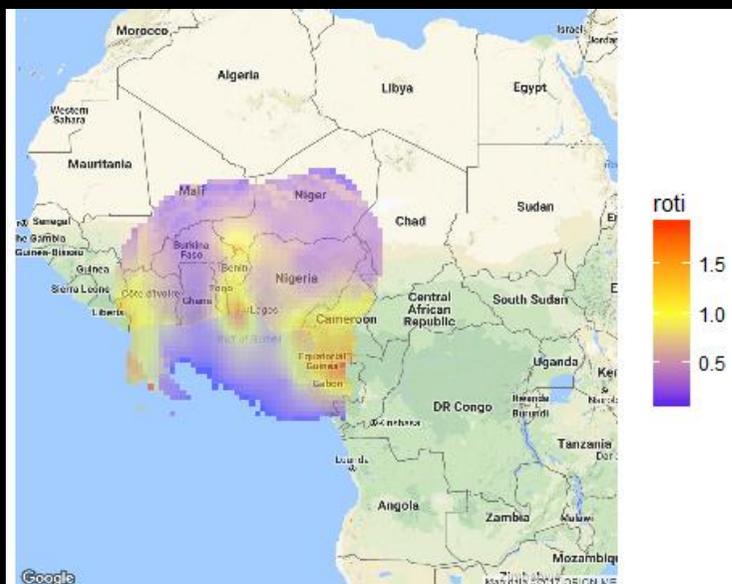

Day 301 – Quiet Day

Test Cases: Clustering

Stratification applied to Test cases

Spatial Mean 18

04 SUMMARY

SUMMARY

- It is proposed to have a **spatial mean based on ROTI**, as a regional indicator of the presence of irregularities through a sampling process.
- A series of locations and ROTI values of clusters in the mapped area can be reported.
- Regarding the spatial mean, which is based on the average of the values of the centroids, a sufficient number of cases should be computed in order to determine the relevant clusters numbers and thresholds.
- The indicator could be generated in near-real time every 15-20 minutes, taking into account stations availability, time to compute ROTI (every 5 minutes) and computational processing of the clustering.

PROSPECTS

- Use of k-medoids instead of k-means and 'scientific' determination of k.
- Use of different clustering techniques (OPTICS)
- Try to avoid spatial interpolation for operational use.
