Request Form for Participants in the Workshop on Nuclear Reaction Data and Nuclear Reactors: Physics, Design and Safety

25 February - 28 March 2002
Miramare - Trieste, Italy

Please use this form to request programs from the NEA DATA BANK. Several programs may be requested on the same form. Information regarding dispatch format must be supplied. All computer-readable program material is sent in a form compatible with your computer hardware. It is accompanied by: (1) printouts of a contents map and an information file; (2) full documentation.

Comments

CD-ROMs formatted and written following the ISO 9660 standard can be read across different operating systems. Most CD-ROM readers follow this standard. CD-ROMs will contain files either compatible with UNIX or non-UNIX systems, i.e. the end_of_line in the ASCII files will be either a line_feed <lf> or a carriage_return + line_feed <cr><lf>. In order to preserve the original file structure and names each program package is stored as a TAR or compressed into a spanned archive ZIP file (PKZIP software).

Feedback on Computer Programs

Recipients of computer programs are invited to report back to the NEA Data Bank the following information concerning material received:

- errors or shortcomings detected;
- inconsistencies between the program and its documentation (differences in the model description and its coding in the program);
- limitations found in its applicability not reported in the documentation;
- improvements carried out (corrections of errors or removal of shortcomings);
- generalisations of the program so that it can be applied to a wider range of problems;
- auxiliary programs developed;
- information on validation carried out.

This information will be transmitted to the author(s) and users of the program as well as being used to update the program if necessary.

This activity aims at updating and maintaining a high quality of the computer code collection.

Disclaimer

Neither the Organisation for Economic Co-operation and Development or any of its Member countries, nor any person acting either on behalf of any of them or otherwise in furtherance of the activities of the Nuclear Energy Agency assumes any liabilities with respect to the use of, or for damage resulting from the use of, any information, method or process disclosed in the distributed material.

This applies also to non-Member countries and Organisations that have contributed to the distributed information.

Restrictions on the use of computer programs

Authors and their establishments must be consulted if an organisation receiving programs and data intends to use them to provide a commercial service to outside users.

Programs and data are provided on the understanding that the agreement of the originating establishment shall be obtained before a service is offered involving the sale or use on a fee-paying basis of any program or data set distributed by the NEADB. This restriction applies also to modified versions derived from program copies obtained from the NEADB.

Transfer of a program or data to a user in a given establishment confers only the right to use the program within that organisation: in particular, copies of programs and data should not be distributed to persons outside their own establishment; users in other centres should contact the NEADB directly in order to obtain program copies.

Computer programs and data are provided on the understanding that whenever the use of programs obtained through the NEADB, or of locally modified versions of them, results in a publication (in a journal, conference proceedings, laboratory report, book, etc...), the program and its author or laboratory of origin shall be acknowledged in the publication.

To be more specific as to how these restrictions should be interpreted the following should be noted:

- the codes users receive from the Data Bank cannot be further distributed; this obviously implies that they cannot be sold;
- if users modify codes, they should inform the authors, and improved versions should not be sold unless users come to an agreement with the principal authors;
- users are not allowed to set up the code on a shared computer and have other users pay a royalty for its use;
- however, there is no objection that expert users, within a contract or project with a third party, model a problem, interpret results and recover the cost of their work and expertise by using a code received from the Data Bank.

I herewith agree with these conditions :
