<b>Foreword</b>	v
<b>Preface to Second Edition</b>	ix
<b>Preface to First Edition</b>	xv
<b>1 Basic Concepts and Technologies</b>	1
1.1 New Flow Regimes in Microsystems . . . . .	1
1.2 The Continuum Hypothesis . . . . .	8
1.2.1 Molecular Magnitudes . . . . .	13
1.2.2 Mixed Flow Regimes . . . . .	19
1.2.3 Experimental Evidence . . . . .	19
1.3 The Pioneers . . . . .	24
1.4 Modeling of Microflows . . . . .	31
1.5 Modeling of Nanoflows . . . . .	36
1.6 Numerical Simulation at All Scales . . . . .	40
1.7 Full-System Simulation of Microsystems . . . . .	41
1.7.1 Reduced-Order Modeling . . . . .	45
1.7.2 Coupled Circuit/Device Modeling . . . . .	47
<b>2 Governing Equations and Slip Models</b>	51
2.1 The Basic Equations of Fluid Dynamics . . . . .	51
2.1.1 Incompressible Flow . . . . .	54
2.1.2 Reduced Models . . . . .	56

2.2	Compressible Flow . . . . .	57
2.2.1	First-Order Models . . . . .	59
2.2.2	The Role of the Accommodation Coefficients . . . . .	61
2.3	High-Order Models . . . . .	66
2.3.1	Derivation of High-Order Slip Models . . . . .	67
2.3.2	General Slip Condition . . . . .	70
2.3.3	Comparison of Slip Models . . . . .	74
<b>3</b>	<b>Shear-Driven Flows</b>	<b>79</b>
3.1	Couette Flow: Slip Flow Regime . . . . .	79
3.2	Couette Flow: Transition and Free-Molecular Flow Regimes . . . . .	83
3.2.1	Velocity Model . . . . .	83
3.2.2	Shear Stress Model . . . . .	86
3.3	Oscillatory Couette Flow . . . . .	90
3.3.1	Quasi-Steady Flows . . . . .	91
3.3.2	Unsteady Flows . . . . .	96
3.3.3	Summary . . . . .	109
3.4	Cavity Flow . . . . .	111
3.5	Grooved Channel Flow . . . . .	112
<b>4</b>	<b>Pressure-Driven Flows</b>	<b>117</b>
4.1	Slip Flow Regime . . . . .	117
4.1.1	Isothermal Compressible Flows . . . . .	118
4.1.2	Adiabatic Compressible Flows – Fanno Theory . . . . .	126
4.1.3	Validation of Slip Models with DSMC . . . . .	131
4.1.4	Effects of Roughness . . . . .	136
4.1.5	Inlet Flows . . . . .	139
4.2	Transition and Free-Molecular Regimes . . . . .	140
4.2.1	Burnett Equations . . . . .	145
4.2.2	A Unified Flow Model . . . . .	147
4.2.3	Summary . . . . .	166
<b>5</b>	<b>Thermal Effects in Microscales</b>	<b>169</b>
5.1	Thermal Creep (Transpiration) . . . . .	169
5.1.1	Simulation Results . . . . .	171
5.1.2	A Thermal Creep Experiment . . . . .	175
5.1.3	Knudsen Compressors . . . . .	176
5.2	Other Temperature-Induced Flows . . . . .	177
5.3	Heat Conduction and the Ghost Effect . . . . .	179
5.4	Heat Transfer in Poiseuille Microflows . . . . .	181
5.4.1	Pressure-Driven Flows . . . . .	181
5.4.2	Force-Driven Flows . . . . .	189
5.5	Heat Transfer in Couette Microflows . . . . .	192
<b>6</b>	<b>Prototype Applications of Gas Flows</b>	<b>197</b>

6.1	Gas Damping and Dynamic Response of Microsystems . . . . .	198
6.1.1	Reynolds Equation . . . . .	201
6.1.2	Squeezed Film Effects in Accelerometers . . . . .	212
6.2	Separated Internal Flows . . . . .	216
6.3	Separated External Flows . . . . .	223
6.4	Flow Past a Sphere: Stokes Flow Regime . . . . .	226
6.4.1	External Flow . . . . .	226
6.4.2	Sphere-in-a-Pipe . . . . .	227
6.5	Microfilters . . . . .	229
6.5.1	Drag Force Characteristics . . . . .	233
6.5.2	Viscous Heating Characteristics . . . . .	235
6.5.3	Short Channels and Filters . . . . .	236
6.5.4	Summary . . . . .	241
6.6	Micropulsion and Micronozzle Flows . . . . .	242
6.6.1	Micropulsion Analysis . . . . .	242
6.6.2	Rarefaction and Other Effects . . . . .	247
<b>7</b>	<b>Electrokinetic Flows</b>	<b>255</b>
7.1	Electrokinetic Effects . . . . .	256
7.2	The Electric Double Layer (EDL) . . . . .	258
7.2.1	Near-Wall Potential Distribution . . . . .	261
7.3	Governing Equations . . . . .	263
7.4	Electroosmotic Flows . . . . .	265
7.4.1	Channel Flows . . . . .	266
7.4.2	Time-Periodic and AC Flows . . . . .	272
7.4.3	EDL/Bulk Flow Interface Velocity Matching Condition	279
7.4.4	Slip Condition . . . . .	280
7.4.5	A Model for Wall Drag Force . . . . .	281
7.4.6	Joule Heating . . . . .	282
7.4.7	Applications . . . . .	283
7.5	Electrophoresis . . . . .	292
7.5.1	Governing Equations . . . . .	294
7.5.2	Classification . . . . .	295
7.5.3	Taylor Dispersion . . . . .	298
7.5.4	Charged Particle in a Pipe . . . . .	302
7.6	Dielectrophoresis . . . . .	303
7.6.1	Applications . . . . .	304
<b>8</b>	<b>Surface Tension-Driven Flows</b>	<b>311</b>
8.1	Basic Concepts . . . . .	312
8.2	General Form of Young's Equation . . . . .	317
8.3	Governing Equations for Thin Films . . . . .	319
8.4	Dynamics of Capillary Spreading . . . . .	321
8.5	Thermocapillary Pumping . . . . .	325
8.6	Electrocapillary . . . . .	328

8.6.1 Generalized Young-Lippmann Equation . . . . .	333
8.6.2 Optoelectrowetting . . . . .	335
8.7 Bubble Transport in Capillaries . . . . .	337
<b>9 Mixers and Chaotic Advection</b>	<b>345</b>
9.1 The Need for Mixing at Microscales . . . . .	346
9.2 Chaotic Advection . . . . .	348
9.3 Micromixers . . . . .	351
9.4 Quantitative Characterization of Mixing . . . . .	357
<b>10 Simple Fluids in Nanochannels</b>	<b>367</b>
10.1 Atomistic Simulation of Simple Fluids . . . . .	368
10.2 Density Distribution . . . . .	370
10.3 Diffusion Transport . . . . .	377
10.4 Validity of the Navier-Stokes Equations . . . . .	384
10.5 Boundary Conditions at Solid-Liquid Interfaces . . . . .	390
10.5.1 Experimental and Computational Results . . . . .	390
10.5.2 Conceptual Models of Slip . . . . .	399
10.5.3 Reynolds-Vinogradova Theory for Hydrophobic Surfaces . . . . .	404
<b>11 Water in Nanochannels</b>	<b>411</b>
11.1 Definitions and Models . . . . .	411
11.1.1 Atomistic Models . . . . .	413
11.2 Static Behavior . . . . .	420
11.2.1 Density Distribution and Dipole Orientation . . . . .	421
11.2.2 Hydrogen-Bonding . . . . .	428
11.2.3 Contact Angle . . . . .	434
11.2.4 Dielectric Constant . . . . .	434
11.3 Dynamic Behavior . . . . .	435
11.3.1 Basic Concepts . . . . .	436
11.3.2 Diffusion Transport . . . . .	440
11.3.3 Filling and Emptying Kinetics . . . . .	442
<b>12 Electroosmotic Flow in Nanochannels</b>	<b>453</b>
12.1 The Need for Atomistic Simulation . . . . .	453
12.2 Ion Concentrations . . . . .	458
12.2.1 Modified Poisson-Boltzmann Equation . . . . .	462
12.3 Velocity Profiles . . . . .	464
12.4 Slip Condition . . . . .	467
12.5 Charge Inversion and Flow Reversal . . . . .	469
<b>13 Functional Fluids and Functionalized Nanotubes</b>	<b>479</b>
13.1 Colloidal Particles and Self-Assembly . . . . .	480
13.1.1 Magnetorheological (MR) Fluids . . . . .	483

13.1.2 Electrophoretic Deposition . . . . .	494
13.2 Electrolyte Transport Through Carbon Nanotubes . . . . .	499
13.2.1 Carbon Nanotubes . . . . .	500
13.2.2 Ion Channels in Biological Membranes . . . . .	502
13.2.3 Transport Through Unmodified Nanotubes . . . . .	503
13.2.4 Transport Through Nanotubes with Charges at the Ends . . . . .	506
13.2.5 Transport Through Functionalized Nanotubes . . . . .	506
13.2.6 Anomalous Behavior . . . . .	508
<b>14 Numerical Methods for Continuum Simulation</b>	<b>517</b>
14.1 Spectral Element Method: The $\mu$ Flow Code . . . . .	518
14.1.1 Incompressible Flows . . . . .	522
14.1.2 Compressible Flows . . . . .	525
14.1.3 Verification Example: Resolution of the Electric Double Layer . . . . .	532
14.1.4 Moving Domains . . . . .	534
14.2 Meshless Methods . . . . .	540
14.2.1 Domain Simulation . . . . .	541
14.2.2 Boundary-only Simulation . . . . .	546
14.3 Particulate Microflows . . . . .	551
14.3.1 Hydrodynamic Forces on Spheres . . . . .	552
14.3.2 The Force Coupling Method (FCM) . . . . .	556
<b>15 Multiscale Modeling of Gas Flows</b>	<b>569</b>
15.1 Direct Simulation Monte Carlo (DSMC) Method . . . . .	570
15.1.1 Limitations and Errors in DSMC . . . . .	572
15.1.2 DSMC for Unsteady Flows . . . . .	577
15.1.3 DSMC-Information Preservation Method . . . . .	580
15.2 DSMC-Continuum Coupling . . . . .	581
15.2.1 The Schwarz Algorithm . . . . .	586
15.2.2 Interpolation Between Domains . . . . .	587
15.3 Multiscale Analysis of Microfilters . . . . .	589
15.3.1 Stokes/DSMC Coupling . . . . .	589
15.3.2 Navier-Stokes/DSMC Coupling . . . . .	595
15.4 The Boltzmann Equation . . . . .	598
15.4.1 Classical Solutions . . . . .	602
15.4.2 Sone's Asymptotic Theory . . . . .	607
15.4.3 Numerical Solutions . . . . .	617
15.4.4 Non-Isothermal Flows . . . . .	618
15.5 Lattice-Boltzmann Method (LBM) . . . . .	622
15.5.1 Boundary Conditions . . . . .	629
15.5.2 Comparison with Navier-Stokes Solutions . . . . .	630
15.5.3 LBM Simulation of Microflows . . . . .	632

<b>16 Multiscale Modeling of Liquid Flows</b>	<b>635</b>
16.1 Molecular Dynamics (MD) Method . . . . .	636
16.1.1 Intermolecular Potentials . . . . .	638
16.1.2 Calculation of the Potential Function . . . . .	644
16.1.3 Thermostats . . . . .	647
16.1.4 Data Analysis . . . . .	650
16.1.5 Practical Guidelines . . . . .	656
16.1.6 MD Software . . . . .	658
16.2 MD-Continuum Coupling . . . . .	658
16.3 Embedding Multiscale Methods . . . . .	666
16.3.1 Application to Poisson-Boltzmann Equation . . . . .	667
16.3.2 Application to Navier-Stokes Equations . . . . .	669
16.4 Dissipative Particle Dynamics (DPD) . . . . .	673
16.4.1 Governing Equations . . . . .	675
16.4.2 Numerical Integration . . . . .	678
16.4.3 Boundary Conditions . . . . .	682
<b>17 Reduced-Order Modeling</b>	<b>687</b>
17.1 Classification . . . . .	687
17.1.1 Quasi-Static Reduced-Order Modeling . . . . .	688
17.1.2 Dynamical Reduced-Order Modeling . . . . .	689
17.2 Generalized Kirchoffian Networks . . . . .	690
17.2.1 Equivalent Circuit Representation . . . . .	691
17.2.2 Description Languages . . . . .	699
17.3 Black Box Models . . . . .	705
17.3.1 Nonlinear Static Models . . . . .	705
17.3.2 Linear Dynamic Models . . . . .	707
17.3.3 Nonlinear Dynamic Models . . . . .	711
17.4 Galerkin Methods . . . . .	715
17.4.1 Linear Galerkin Methods . . . . .	715
17.4.2 Nonlinear Galerkin Methods . . . . .	725
<b>18 Reduced-Order Simulation</b>	<b>731</b>
18.1 Circuit and Device Models for Lab-On-A-Chip Systems . . . . .	731
18.1.1 Electrical Model . . . . .	733
18.1.2 Fluidic Model . . . . .	735
18.1.3 Chemical Reactions: Device Models . . . . .	740
18.1.4 Separation: Device Model . . . . .	741
18.1.5 Integration of the Models . . . . .	743
18.1.6 Examples . . . . .	743
18.2 Macro-Modeling of Squeezed Film Damping . . . . .	755
18.2.1 Equivalent Circuit Models . . . . .	758
18.2.2 Galerkin Methods . . . . .	760
18.2.3 Mixed-level Simulation . . . . .	762
18.2.4 Black Box Models . . . . .	762

Contents xxv

18.3 Compact Model for Electrowetting . . . . .	763
18.4 Software . . . . .	764
