1

International Atomic Energy Agency

## Contents

- Review models and context for KM
- Identify where IT has a role in KM
- Discuss lessons learned regarding IT support for KM
- Present some KM projects and their IT support
- Review conclusions regarding IT's role in KM

2

International Atomic Energy Agency

## An Organizational Context For KM

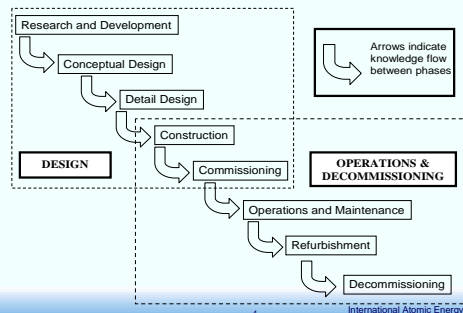

3

# Introduction to IT Tools to Support Knowledge Management

## Knowledge management elements for a nuclear industry operating organization

- Plant policies and procedures
- Document control system
- Configuration management system
- Human resource management
- Training and qualification programmes
- Learning from operating experience
- Work control system
- Corrective action system
- Communication systems

What is the role of IT for each of these elements?

9

International Atomic Energy Agency 

## KM should improve the value to the organization of existing programmes through:

- Identifying risks due to knowledge gaps
- Increasing the value of existing knowledge
- Converting tacit knowledge to explicit knowledge
- Continually learning in a smart and lasting way
- access to more, and more reliable knowledge/information

What role should IT have regarding these?

10

International Atomic Energy Agency 

## IT solutions supporting KM: Lessons Learned

- IT strategy should be based upon achieving KM objectives
- IT can be used effectively to share knowledge critical to the organization's mission
- IT products and services should be developed based upon customer KM needs
- not all KM needs can be addressed through IT solutions

**Conclusion: IT isn't KM, it is a KM tool !**

11

International Atomic Energy Agency 

## Example KM Project Structure

12

# Introduction to IT Tools to Support Knowledge Management

## Knowledge: An individual's perspective

- A person's capacity to act can be seen as the result of a five-fold integration process by which several kinds of knowledge are integrated:
  - technical expertise
  - methodological knowledge
  - social competence (getting along with others)
  - meta-knowledge (knowing where)
  - experience.

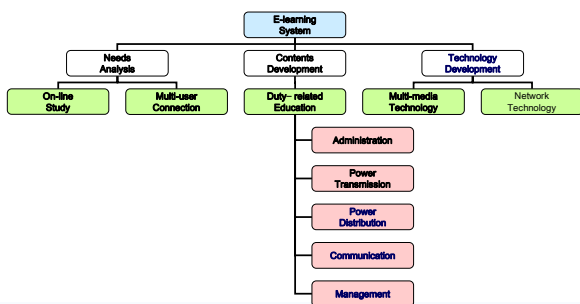

13

## Knowledge: An Individual's Perspective

- All knowledge an individual has is the result of a personal learning history.
- Learning is always shaped by the context in which a person's learning takes place.
- Learning and knowledge accumulated in a certain context may not be actionable in a different context.
- Thus, organizational context always has to be considered as a variable in knowledge transfer and preservation activities.

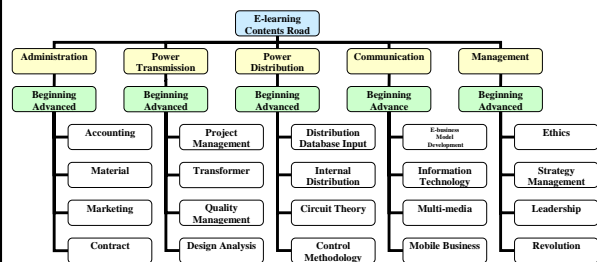

14

## Example E-Learning Structure

15

## Example E-learning contents map

16

## People-Based Knowledge Repository: Community of Practice

17

International Atomic Energy Agency 

## Conclusions

- IT isn't KM, it is a KM tool !
- KM Projects shouldn't be managed by the IT organization
