Title:

## Contractions for the Hilbert Metric

Abstract: We consider a convex set in \$ ${ }^{2}$ mathbb $\{R\}^{\wedge} n \$$ entitled with the Hilbert Metric and a transformation \$T\$ of this set. We show that under certain geometric conditions on the T , this transformation contracts the metric above. As a consequence, we obtain hyperbolicity results for the family of maps $(x, y)->\left(y, a-x^{\wedge} 2+b y\right)$.
