Satellite Navigation Science and Technology for Africa

23 March - 9 April, 2009

Autonomous GNSS

MILLER Casey C.
*Wright Patterson Air Force Base Sensors Directorate
2241 Avionics Circle, WPAFB
Wright Patterson OH 45433*

MILLER Mikel
*Air Force Research Laboratory
101 West Eglin Blvd., Ste. 268
Eglin AFB FL 32542-6810*

MORTON Jade
*Miami University Dept. of Electrical and Engineering
260 P. Engineering Building
Oxford OH 45056*

Workshop on "Satellite Navigation Science and Technology for Africa"

Autonomous Ground Vehicle Guidance, Navigation and Control Using GNSS and Other Navigation Sensor Measurements

30 March 2009

*Dr. Mikel Miller
Dr. Jade Morton
1Lt Casey Miller*

- **Introductions**

- **Overview**

- **Autonomous GNC**

- **Lego® Mindstorms Intro**

- **Lego® Mindstorms Challenge**

Dr. Mikel M. Miller, Ph.D.

- **Education:**

- Ph.D. EE (98) & MSEE (87) – AF Institute of Technology (AFIT); Dayton, OH
- BSEEE (82) – North Dakota State Univ; Fargo, ND

- **Experience:**

- Current Position: Technical Director, AFRL/RWG, EAFB, FL
- Over 24 years of Pos, Nav, & Time (PNT) Experience
- Published over 40 Technical Papers related to PNT
- USAF Retired after 20 yrs

- **Teaching Experience:**

- 5 yrs as AFIT Assistant Prof
- Over 20 short courses
- Miami Univ & AFIT Adjunct Faculty

- **Professional Societies:**

- Institute of Nav (ION):
 - Fellow
 - Current President
 - Royal Institute of Nav
 - Associate Fellow
- IEEE, AIAA, TBP, EKU

- **Family:**

- **Married 26 Years to Colleen**
- **5 Children: Casey, Krista, Trevor, Megan, & Lauren**

June 2007

- **Family:**

- **1 Grandchild: Miles**

Dec 2008

- **Introductions**

- **Overview**

- **Autonomous GNC**

- **Lego® Mindstorms Intro**

- **Lego® Mindstorms Challenge**

Dr. Yu (Jade) Morton, PhD.

- **Education:**

- Ph.D. EE (91) – The Pennsylvania State University, University Park, PA
- MS Systems Analysis (00) – Miami University, Oxford, OH
- MS EE (87) – Case Western Reserve University, Cleveland, OH
- BS Physics (83) – Nanjing University, Nanjing, China

- **Professional Experience:**

- Professor, EE, Miami Univ., Oxford, OH. Began tenure track at Miami in 2000
- Post-doctoral Research Fellow, University of Michigan, Ann Arbor, MI, 1992-3
- Published over 70 technical papers related to PNT and ionosphere physics

- **Teaching Experience:**

- 1st EE Professor at Miami (1st woman full professor in Engineering School at Miami)
- Developed a Navigation theme in undergraduate curriculum at Miami

- **Professional Societies:**

- Institute of Navigation (ION)
- IEEE: Aerospace and Electronics, Microwave theory & Technology, Signal Processing

Married 20 yrs to
Dr. John Morton

ION Robotic Lawn Mower Competition

- The purpose of this competition is to design and operate a robotic unmanned lawn mower using the art and science of navigation to rapidly and accurately mow a field of grass.
- In the competition the lawn mowers maneuver through a mock lawn:
 - Cutting grass
 - Avoiding static obstacles like a flower bed
 - Avoiding moving obstacles like a pet dog
 - Traveling along a fence line

DARPA Urban Challenge

- The DARPA Urban Challenge is an autonomous vehicle research program developing technology to keep warfighters off the battlefield, out of harm's way.
- In the competition autonomous ground vehicles maneuver through a mock city environment:
 - Executing simulated supply missions
 - Merging into moving traffic
 - Navigating traffic circles
 - Negotiating busy intersections
 - Avoiding obstacles

Mini-Urban Challenge

- National HS Competition held in conjunction with the ION college Robotic Lawnmower Competition (Dayton, OH)
- Challenge model based on DARPA's Urban Challenge
- HS Students must develop a robotic, autonomous ground vehicle using a LEGO® MindStorms kit to navigate through a LEGO® city
- An autonomous ground vehicle is a vehicle that navigates and drives entirely on its own with no human driver and no remote control.
- Uses a variety of sensors to carry out the task it has been assigned.
- Autonomous vehicles are a focus point of DoD and it has been Congressionally mandated that "It shall be a goal of the Armed Forces to achieve the fielding of unmanned, remotely controlled technology such that... by 2015, one-third of the operational ground combat vehicles are unmanned."

Mini-Urban Challenge

- The purpose of this competition is to challenge high school students to design and operate a robotic unmanned car built from a LEGO® MindStorms kit that can accurately navigate through a LEGO® city.
- In the competition the LEGO® cars will maneuver through a mock LEGO® city:
 - Driving along the roads
 - Following traffic signs (stop signs, speed limits, etc.)
 - Stopping at stores
 - Avoiding pedestrians

Outreach – Next Generation Engineers

Large need for more students to pursue engineering degrees

- Baby boomer retirements will deplete the science and engineering workforce by 50%
- “Over the next 18 months, 27 percent of the engineering work force will be eligible for retirement”
- Fewer than 6% of high school seniors plan to pursue engineering degrees
- One-third drop in the number of U.S. students interested in pursuing engineering degrees throughout the past decades

Outreach – Next Generation Engineers

DC Power Supply Example

Power supply
with Voltage output

Suppose that by
turning the button
90 degrees
clockwise, it is
supposedly
outputting 5 VDC

How do we make sure that the voltage is 5VDC?

Example Courtesy of Dr. Maarten Uijt de Haag, Ohio University

- Introductions
- Overview
- **Autonomous GNC**
 - Basic Control
 - ION Robotic Mower
 - DARPA Challenge
- **Lego® Mindstorms Intro**
- **Lego® Mindstorms Challenge**

DC Power Supply Example

By measuring it with a SENSOR (= Voltmeter)

The SENSOR will give you FEEDBACK

- Overview
- **Autonomous GNC**
 - Basic Control
 - ION Robotic Mower
 - DARPA Challenge
- **Lego® Mindstorms Intro**
- **Lego® Mindstorms Challenge**

DC Motor Example

Application of a voltage source (with enough power)
make the motor rotate its output shaft.

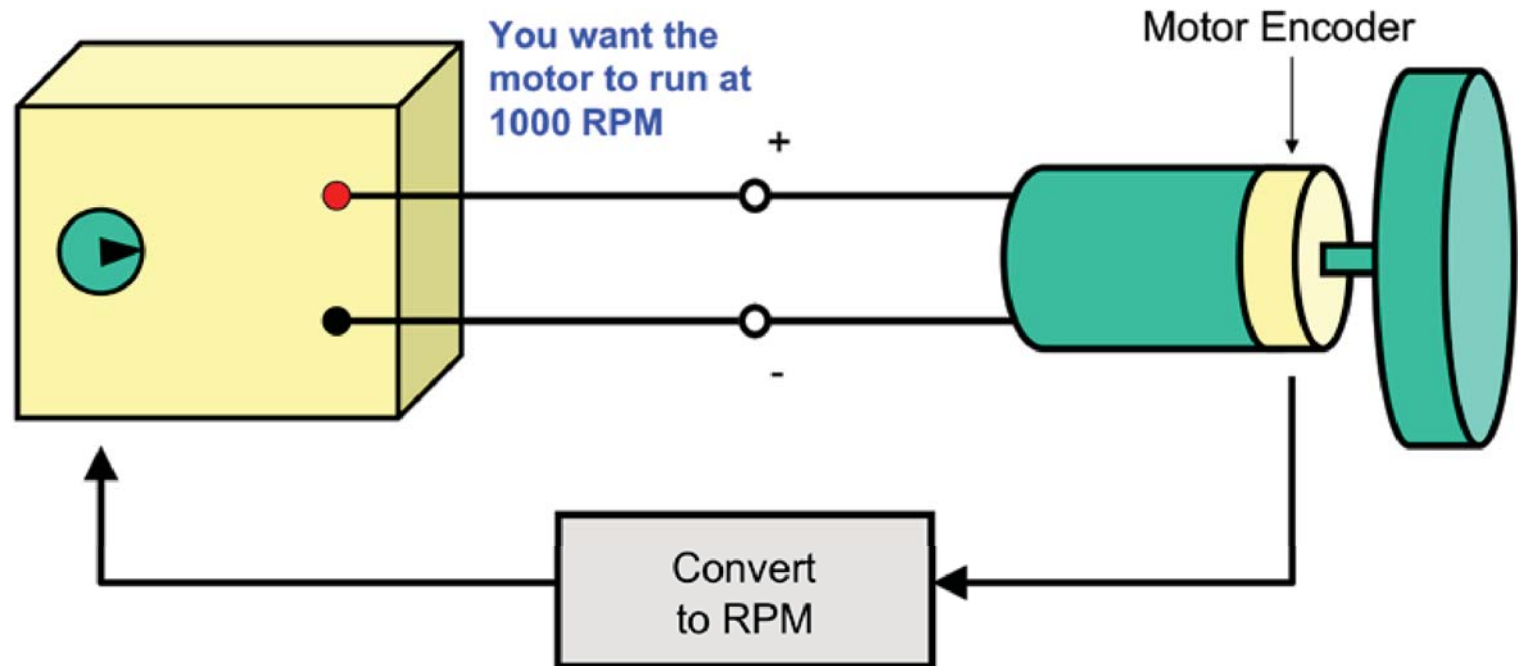

For example, our motors will run at 7,800 rotations-per-minute (RPM)
if unloaded and at the maximum voltage (= 12 VDC)

- Introductions
- Overview
- **Autonomous GNC**
 - Basic Control
 - ION Robotic Mower
 - DARPA Challenge
- **Lego® Mindstorms Intro**
- **Lego® Mindstorms Challenge**

DC Motor Example

The motor encoders (= sensor) measure the shaft rotation in a certain time interval. For example, the axis rotated 120 degrees in the last 1 ms.

The Control Loop

Autonomous Vehicle Navigation & Control Loop

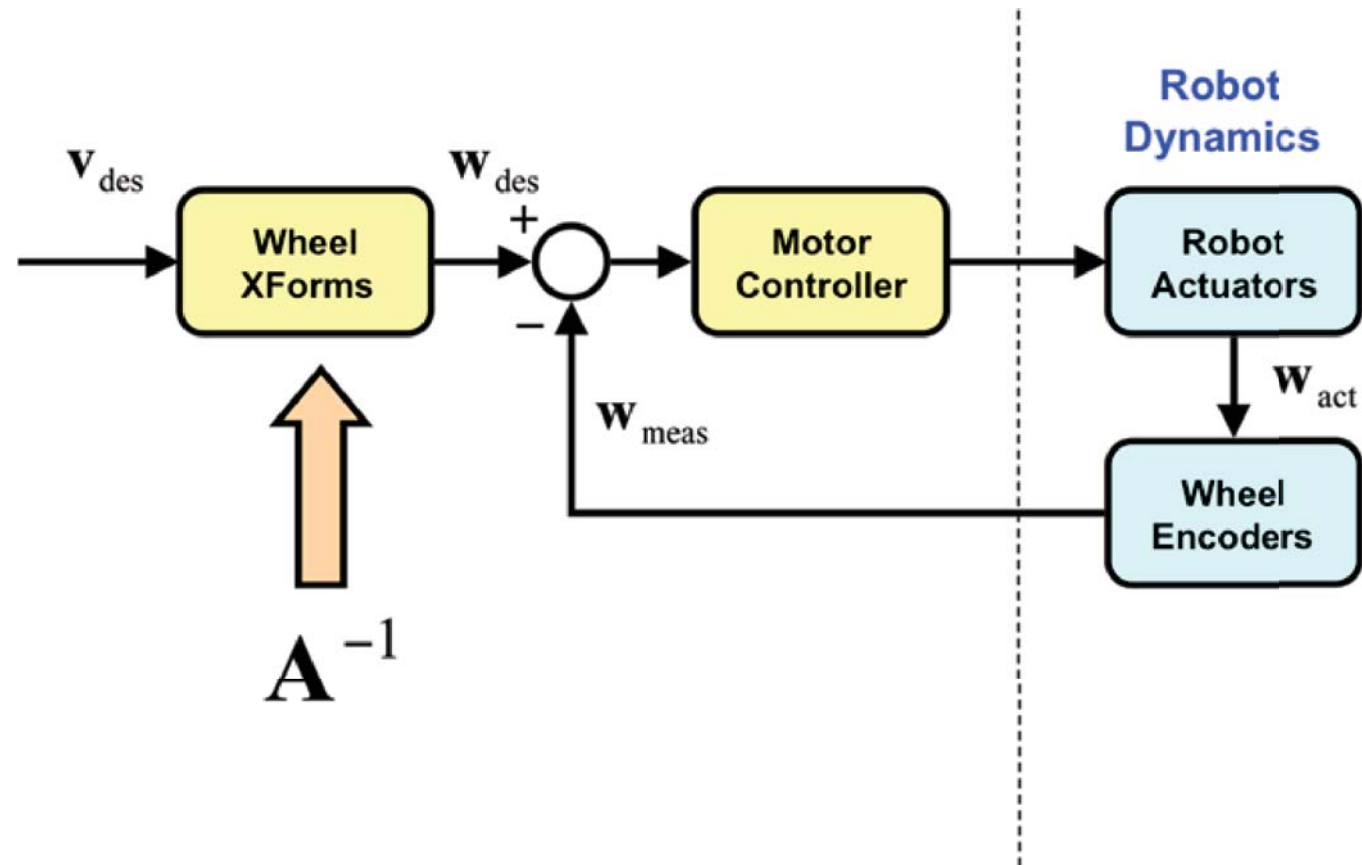

Note: x = position
 $\dot{x} = v$ = velocity

- Introductions
- Overview
- **Autonomous GNC**
 - Basic Control
 - ION Robotic Mower
 - DARPA Challenge
- Lego® Mindstorms Intro
- Lego® Mindstorms Challenge

Controller: Inner Loop

Note: A^{-1} = Transformation matrix from v to w

- Introductions
- Overview
- **Autonomous GNC**
 - Basic Control
 - ION Robotic Mower
 - DARPA Challenge
- **Lego® Mindstorms Intro**
- **Lego® Mindstorms Challenge**

Other Sensors

- Use local sensors to measure v directly:
 - **Accelerometers:**
 - measure body acceleration
 - in other words: accelerations along x_b, y_b
 - units: g ($= 9.8 \text{ m/s}^2$)
 - **Gyroscopes**
 - measure body angular rates
 - in other words: angular rates around z_b
 - units: degrees/second $= ^\circ/\text{s}$

- Introductions
- Overview
- **Autonomous GNC**
 - Basic Control
 - ION Robotic Mower
 - DARPA Challenge

Moving Obstacle

- **Height: 36", Width: 20" (at the base) Length: 32"**
- **Max Speed: 3 m/s (10.8 km/hr)**
- **Rules for Moving Obstacle Motion:**
 - The obstacle will not collide the teams' mowers (however the teams' mowers may collide with the moving obstacle).
 - The moving obstacle will follow a linear path (+/- 10 degrees) along either the short or long axis of the field.
- **The obstacle will randomly start and stop along the path.**
 - time stopped is defined by a random value uniformly distributed from 10-300 seconds
 - time in motion defined by a random value uniformly distributed from 0-30 seconds.
- **Also note: in the case that the moving obstacle breaks down it will become a static obstacle and must be dealt with appropriately.**

The image is a composite illustrating a robot's localization system. It consists of three main parts:

- Top Left:** A 2D plot titled "Mask Angle 0 Degrees" showing a robot's path in a 2D plane. The path is a series of red circles forming a complex, winding shape. The axes range from -1 to 1. Various points on the path are labeled with numbers (e.g., 1, 14, 15.58, 16, 17, 17.42, 17.67, 17.75, 18.67, 19.67, 20, 25, 27, 28, 33, 37.33, 42.5, 45.67, 48.67, 51.67, 54.67, 57.67, 60.67, 63.67, 66.67, 69.67, 72.67, 75.67, 78.67, 81.67, 84.67, 87.67, 90.67, 93.67, 96.67, 99.67, 102.67, 105.67, 108.67, 111.67, 114.67, 117.67, 120.67, 123.67, 126.67, 129.67, 132.67, 135.67, 138.67, 141.67, 144.67, 147.67, 150.67, 153.67, 156.67, 159.67, 162.67, 165.67, 168.67, 171.67, 174.67, 177.67, 180.67, 183.67, 186.67, 189.67, 192.67, 195.67, 198.67, 201.67, 204.67, 207.67, 210.67, 213.67, 216.67, 219.67, 222.67, 225.67, 228.67, 231.67, 234.67, 237.67, 240.67, 243.67, 246.67, 249.67, 252.67, 255.67, 258.67, 261.67, 264.67, 267.67, 270.67, 273.67, 276.67, 279.67, 282.67, 285.67, 288.67, 291.67, 294.67, 297.67, 300.67, 303.67, 306.67, 309.67, 312.67, 315.67, 318.67, 321.67, 324.67, 327.67, 330.67, 333.67, 336.67, 339.67, 342.67, 345.67, 348.67, 351.67, 354.67, 357.67, 360.67, 363.67, 366.67, 369.67, 372.67, 375.67, 378.67, 381.67, 384.67, 387.67, 390.67, 393.67, 396.67, 399.67, 402.67, 405.67, 408.67, 411.67, 414.67, 417.67, 420.67, 423.67, 426.67, 429.67, 432.67, 435.67, 438.67, 441.67, 444.67, 447.67, 450.67, 453.67, 456.67, 459.67, 462.67, 465.67, 468.67, 471.67, 474.67, 477.67, 480.67, 483.67, 486.67, 489.67, 492.67, 495.67, 498.67, 501.67, 504.67, 507.67, 510.67, 513.67, 516.67, 519.67, 522.67, 525.67, 528.67, 531.67, 534.67, 537.67, 540.67, 543.67, 546.67, 549.67, 552.67, 555.67, 558.67, 561.67, 564.67, 567.67, 570.67, 573.67, 576.67, 579.67, 582.67, 585.67, 588.67, 591.67, 594.67, 597.67, 600.67, 603.67, 606.67, 609.67, 612.67, 615.67, 618.67, 621.67, 624.67, 627.67, 630.67, 633.67, 636.67, 639.67, 642.67, 645.67, 648.67, 651.67, 654.67, 657.67, 660.67, 663.67, 666.67, 669.67, 672.67, 675.67, 678.67, 681.67, 684.67, 687.67, 690.67, 693.67, 696.67, 699.67, 702.67, 705.67, 708.67, 711.67, 714.67, 717.67, 720.67, 723.67, 726.67, 729.67, 732.67, 735.67, 738.67, 741.67, 744.67, 747.67, 750.67, 753.67, 756.67, 759.67, 762.67, 765.67, 768.67, 771.67, 774.67, 777.67, 780.67, 783.67, 786.67, 789.67, 792.67, 795.67, 798.67, 801.67, 804.67, 807.67, 810.67, 813.67, 816.67, 819.67, 822.67, 825.67, 828.67, 831.67, 834.67, 837.67, 840.67, 843.67, 846.67, 849.67, 852.67, 855.67, 858.67, 861.67, 864.67, 867.67, 870.67, 873.67, 876.67, 879.67, 882.67, 885.67, 888.67, 891.67, 894.67, 897.67, 900.67, 903.67, 906.67, 909.67, 912.67, 915.67, 918.67, 921.67, 924.67, 927.67, 930.67, 933.67, 936.67, 939.67, 942.67, 945.67, 948.67, 951.67, 954.67, 957.67, 960.67, 963.67, 966.67, 969.67, 972.67, 975.67, 978.67, 981.67, 984.67, 987.67, 990.67, 993.67, 996.67, 999.67, 1002.67, 1005.67, 1008.67, 1011.67, 1014.67, 1017.67, 1020.67, 1023.67, 1026.67, 1029.67, 1032.67, 1035.67, 1038.67, 1041.67, 1044.67, 1047.67, 1050.67, 1053.67, 1056.67, 1059.67, 1062.67, 1065.67, 1068.67, 1071.67, 1074.67, 1077.67, 1080.67, 1083.67, 1086.67, 1089.67, 1092.67, 1095.67, 1098.67, 1101.67, 1104.67, 1107.67, 1110.67, 1113.67, 1116.67, 1119.67, 1122.67, 1125.67, 1128.67, 1131.67, 1134.67, 1137.67, 1140.67, 1143.67, 1146.67, 1149.67, 1152.67, 1155.67, 1158.67, 1161.67, 1164.67, 1167.67, 1170.67, 1173.67, 1176.67, 1179.67, 1182.67, 1185.67, 1188.67, 1191.67, 1194.67, 1197.67, 1200.67, 1203.67, 1206.67, 1209.67, 1212.67, 1215.67, 1218.67, 1221.67, 1224.67, 1227.67, 1230.67, 1233.67, 1236.67, 1239.67, 1242.67, 1245.67, 1248.67, 1251.67, 1254.67, 1257.67, 1260.67, 1263.67, 1266.67, 1269.67, 1272.67, 1275.67, 1278.67, 1281.67, 1284.67, 1287.67, 1290.67, 1293.67, 1296.67, 1299.67, 1302.67, 1305.67, 1308.67, 1311.67, 1314.67, 1317.67, 1320.67, 1323.67, 1326.67, 1329.67, 1332.67, 1335.67, 1338.67, 1341.67, 1344.67, 1347.67, 1350.67, 1353.67, 1356.67, 1359.67, 1362.67, 1365.67, 1368.67, 1371.67, 1374.67, 1377.67, 1380.67, 1383.67, 1386.67, 1389.67, 1392.67, 1395.67, 1398.67, 1401.67, 1404.67, 1407.67, 1410.67, 1413.67, 1416.67, 1419.67, 1422.67, 1425.67, 1428.67, 1431.67, 1434.67, 1437.67, 1440.67, 1443.67,

RedBlade I: Custom DGPS

Carrier phase measurement: $\phi = r - I + T + c(\delta t_u - \delta t^s) + N\lambda + \varepsilon$

Single difference:

$$\Delta\phi = \phi_m - \phi_0 = \Delta r + c\delta t_{m0} + \Delta N\lambda + \varepsilon_{m0}$$

Double difference:

$$\nabla\Delta\phi = \Delta\phi^{si} - \Delta\phi^{sj} = \nabla\Delta r + \nabla\Delta N\lambda + \nabla\varepsilon_{m0}$$

Control Algorithm

Mower driving to path n endpoint.

Path n length = 10 m

Breaks path n into 2 segments: n1, n2

Given current GPS location, drive 5 meter North, stop,
Take new GPS reading and continues to n2 goal goal.

DARPA Challenges

Purpose

“The Grand and Urban Challenges were initiated to leverage American ingenuity to accelerate the research and development of autonomous ground vehicle technology, so it could be applied to military requirements and save American lives on the battlefield.”

Driving Etiquette 101

Because our robot won't be the only car on the road, it needs to follow the same rules as everyone else:

- **Speed limits (GPS &/ wheel encoders)**
- **Staying in the correct lane (GPS & LIDAR)**
- **Intersections (GPS, LIDAR, Radar, Camera)**

These rules need to be absolute, otherwise people could get hurt or worse...

Sandstorm's Sensors

Carnegie Mellon – Grand Challenge 2005

Sensor	Quantity	Interface	Range/Field of View	Primary Function
Long Range LIDAR line scanner	1	ECP compatible Parallel Port	150m (varies with gimbal pitch) with 60 degree field of view	Terrain topology mapping, obstacle detection and characterization
LIDAR line scanner	6	RS422	50m (Shoulder mounted pointed with 15m look ahead) with 180 degree field of view	Terrain topology mapping, obstacle detection and characterization
360° RADAR	1	Ethernet	200 meters (Effective range is 40 to 70 meters) Using ~70 degree field of view	Obstacle detection
Video Camera	1	IEEE 1394	N/A	Visual documentation
GPS/INS	1	Ethernet/RS 232	Position, velocity and acceleration for all axis. Antennas mounted along the top of the fin.	Position sensing and pose estimation.

Stanley's Sensors

Environmental Sensing

Laser

- Accurate, short-range perception (25m)
- Good for slow-motion
- Continually analyzed for obstacles

Radar

- Range data up to 200m
- Coarseness far inferior to laser

Vision

- Provides enhanced range relative to the laser
- No range data
- Classifies terrain based on texture & color

***Radar & Vision enable faster motion**

- **Lego® Mindstorms Challenge**

Mini-Urban Challenge

Purpose

The purpose of this competition is to challenge high school students to design and operate a robotic unmanned car built from a LEGO® MINDSTORMS® kit that can accurately navigate through a LEGO® city

Competition City Design

- Introductions
- Overview
- **Autonomous GNC**
 - Basic Control

Mini-Urban Challenge Sponsors

- The Institute of Navigation (\$20K)
- AFRL Munitions Directorate (\$30K)
 - PIA Established (up to \$1M)
- Lockheed Martin (\$5K)
- Garmin (donated GPS units)
- ArgonST (\$2K)
- Calgary (\$2K)
- Gavad (\$2K)
- COUNT (\$2K)
- Overlook Systems (\$1K)
- LEGO® Company (10% discount)

Lego® Mindstorms: Introduction

- A line of Lego sets combining
 - Microcontroller (programmable brick)
 - Motors, sensors, and Lego parts
- Invented by MIT Media Lab
- First released in 1998 as Robotics Invention System
 - 2 motors, 2 touch sensors, 1 light sensor
- Lego Mindstorm NXT, 2006
 - 3 servo motors, 4 sensors (touch, light, sound, ultrasonic)
- Software:
 - GUI-based programming software (NI LabVIEW as engine)
 - Third-party languages
 - leJOS: Java
 - RobotC
 - Interactive C
 - Visual Basic
 -

- Introductions
- Overview
- Autonomous GNC

- Lego® Mindstorms Challenge

Lego® Mindstorms NXT: Basic Kit Introduction

NXT Intelligent Brick

Rechargeable lithium battery

Servo motors with built-in rotation sensors (3)

Light sensor

Touch sensors (2)

Sound sensor

Ultrasonic sensor

Connector cables
20cm(1), 50cm(2), 35cm(4)

NXT Software

- USB cable
- Charger
- Lego parts
- Wheels
- Gears
- Lamps
-

Converter cables (3)

Lego® Mindstorms NXT: Additional Components

Acceleration

Color

Compass

Gyro

IR sensor

RFID

Temperature sensor

Bluetooth Dongle

Lego® Mindstorms NXT: Software Introduction

- Introductions
- Overview
- Autonomous GNC
- **Lego® Mindstorms Intro**
- **Lego® Mindstorms Challenge**

- Software development platform
- Sensor inputs
- Motor control
- Programming logic
- Putting them together

- Introductions
- Overview
- Autonomous GNC
- **Lego® Mindstorms Intro**
- **Lego® Mindstorms Challenge**

Lego® Mindstorms NXT: Development Platform

- Block-based graphical programming
- National Instrument LabVIEW engine
- 5 groups of built-in blocks
 - Action:
 - motor, sound, display, send message
 - Sensors:
 - touch, sound, light, ultrasonic, button, rotation, timer, receive message
 - Flow:
 - wait, loop, switch, stop
 - Data:
 - logic, math, compare, range, random, variable
 - Advanced:
 - text, number to text, keep alive, file access, calibrate, reset motor
- User-defined blocks
- Misc: starting point, sequence, download, run, help...

- Introductions
- Overview
- Autonomous GNC
- Lego® Mindstorms Intro
- Lego® Mindstorms Challenge

Lego® Mindstorms NXT: Programming Demo

- Introductions
- Overview
- Autonomous GNC
- **Lego® Mindstorms Intro**
- **Lego® Mindstorms Challenge**

- Start a program
- Making sequences (multiple)
- Read sensor inputs
- Move block
- Data wires
- Compare block
- Switch block
- Loop block
- Custom blocks

- **Introductions**
- **Overview**
- **Autonomous GNC**
- **Lego® Mindstorms Intro**
- **Lego® Mindstorms Challenge**

Third Party Software: LeJOS

- A Java Virtual Machine
- Include all the classes (open sources) in NXJ API
- Include tools used to upload code to NXT
- Object oriented
- Can handle multi-dimensional array
- Can handle exceptions
- Can handle float, long, and string (block program can only handle integer!)
- Can use most java.lang, java.util, and java.io classes
- Lots, lots of classes and methods available
- Need to flash the NXT brick memory (nxjflash) with updated firmware (Java VM and LeJOS NXJ)
- Visit: <http://lejos.sourceforge.net/nxj.php>
