EURO-CORDEX

Introduction

CORDEX Aims [Giorgi et al., 2009; TFRCD mandate]

1. Model evaluation framework

Coordinate evaluation and possibly improvement of regional climate downscaling (RCD) techniques.

2. Climate projection framework

Coordinate the production of multi-model RCD-based regional climate change information over regions worldwide, as input for impact and adaptation studies and for AR5.

3. Communication / Interface

Promote interaction between GCM, RCD, and end-user communities.

EURO-CORDEX

Introduction

CORDEX Aims

1. Model evaluation framework
2. Climate projection framework
3. Communication / Interface

EURO-CORDEX Aims (still open for discussion)

1. Coordinate **joint evaluation** in the European region: GCM evaluation, RCM evaluation, reference datasets.
 - 2a. Coordinate the design of the EURO-CORDEX **simulation matrix**.
 - 2b. Coordinate **joint analysis of climate projections** in the European region.
 - 3a. Foster **cooperation with GCM community**: GCM analysis for European region.
 - 3b. Foster **cooperation with impact, adaptation, and mitigation community**: Error correction, ensemble based products, regionally relevant CC indicators, ...
 - 3c. Foster **dissemination** of EURO-CORDEX results: AR5, users

Points for Discussion (Summary)

EURO-CORDEX Basics

- **Region (center of boundaries):**
~ 27N – 72N, ~338W – 45E
(details: http://wcrp.ipsl.jussieu.fr/RCD_CORDEX.html)
- **Spatial resolution:**
 - EUR-11: 0.11 degree (focus)
 - EUR-44: 0.44 degree
- **Periods:**
 - Hindcast (ERA Interim): 1989 – 2008
 - Control: 1951 – 2005 (1981 – 2010, 1951-80)
 - Scenario: 2006 – 2100 (2041-71, 2011-40, 2071-2100)
- **GHG scenarios:**
 - rcp45, rcp85 (focus)
 - rcp26

Basic Information and Current Status

Joint Evaluation

Design of the Simulation Matrix

Joint Analysis of Climate Projections

Interface to Impact/Adaptation Community

The EURO-CORDEX Community

Points for Discussion (Summary)

EURO-CORDEX

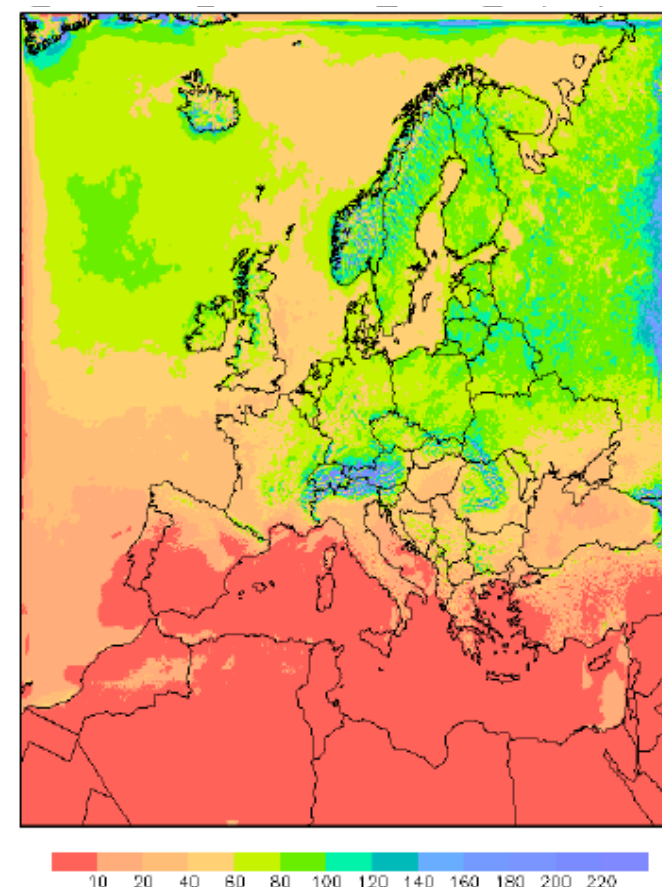

Joint Evaluation

Joint Evaluation Status:

- Finished ERA-Interim RCM simulations:
 - EUR-11: CCLM4.8, REMO, WRF310
 - EUR-44: RCA3.5, WRF321
- Groups currently evaluate their own simulations (Keuler et al., next presentation)
- Joint evaluation could start NOW

First REMO EUR-11 results [BMBF-funded AR5 national activity]

Precipitation [mm/month] July 1989 – 2008
REMO-ERAinterim

EURO-CORDEX

Joint Evaluation

Joint Evaluation Next Steps and Some Ideas:

- **Link groups** interested in joint EURO-CORDEX evaluation

→ Establish **EURO-CORDEX evaluation team**:

- Collect **reference datasets**
 - European wide datasets
 - Sub-regional datasets with higher spatial resolution
- Evaluation **sub-regions** (Rockel-regions?)
- **Metrics**
 - Standard CORDEX evaluation (“quick-look general metric”)
 - Region specific metrics.
- Groups doing more specific analyses might want to link up

REMO Performance

[A. Haensler et al., talk on Wednesday]

Introduction

Basic Information and Status

Joint Evaluation

Design of the Simulation Matrix

Joint Analysis of Climate Projections

Interface to Impact/Adaptation Community

The EURO-CORDEX Community

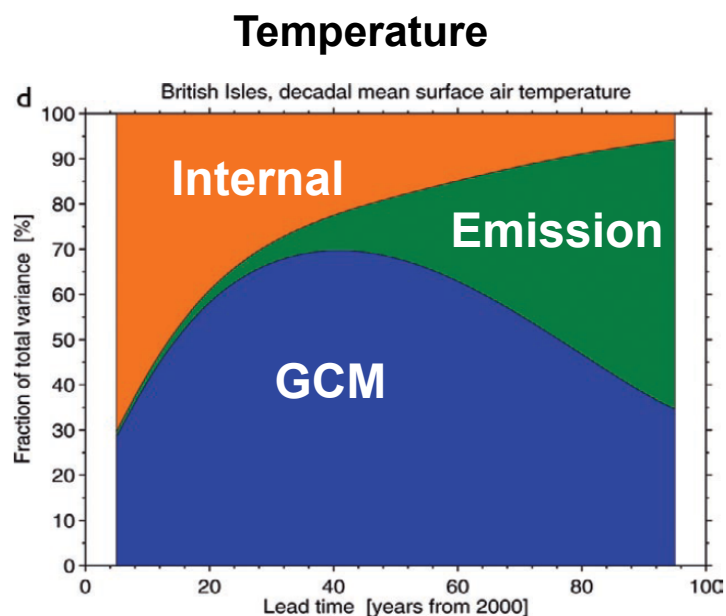

Points for Discussion (Summary)

The Relative Importance of the Uncertainty Components

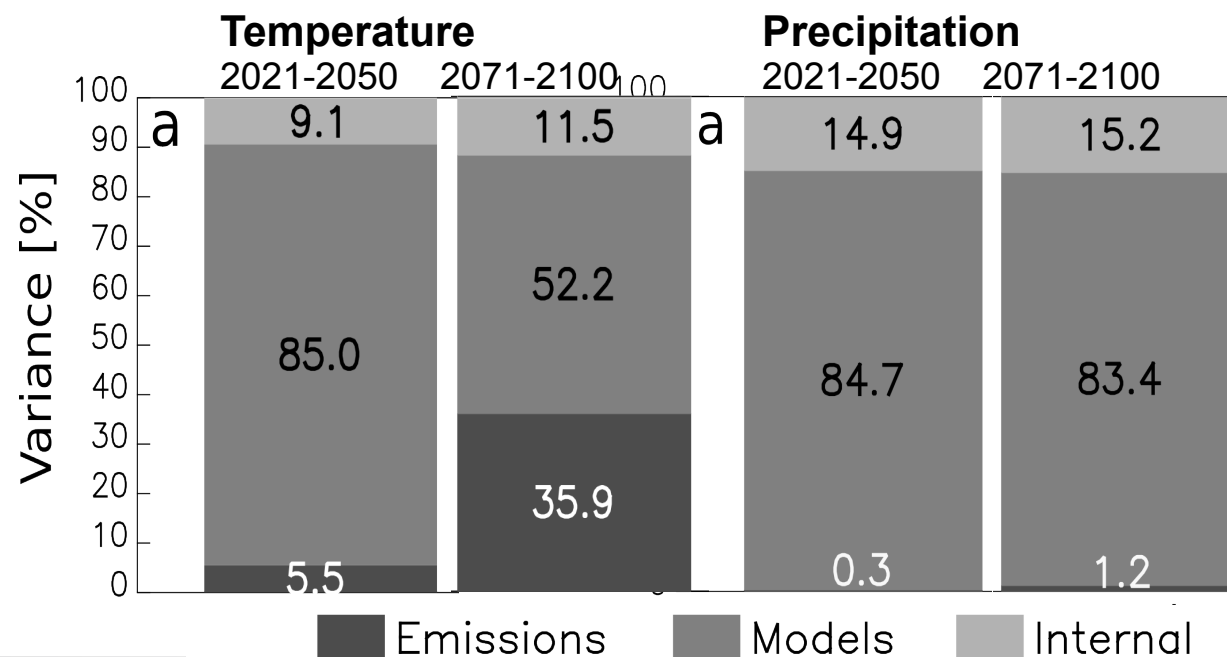

- **GHG scenarios, internal variability, and GCMs (CMIP3):**
 - internal variability contributes at short lead times and for short averaging periods
 - emissions partly contribute at the end of the century (depends on parameter)
 - **GCMs contribute the major fraction** to uncertainty over Europe (and worldwide)

Uncertainty Components in CMIP3 (decadal, British Isles)

[Hawkins and Sutton, 2009]

Uncertainty Components in CMIP3 (30 yrs, Europe)

[Prein and Gobiet, submitted]

The Relative Importance of the Uncertainty Components

- **GHG scenarios, internal variability, and GCMs (CMIP3):**
 - internal variability contributes at short lead times and for short averaging periods
 - emissions partly contribute at the end of the century (depends on parameter)
 - **GCMs contribute the major fraction** to uncertainty over Europe (and worldwide)
[e.g., Hawkins and Sutton, 2009; 2010; Prein and Gobiet, submitted]
- **RCMs and GCMs (PRUDENCE, ENSEMBLES):**
 - **GCMs contribute > 50%** to uncertainty (except JJA summer)
[Déqué et al., 2007; 2011]

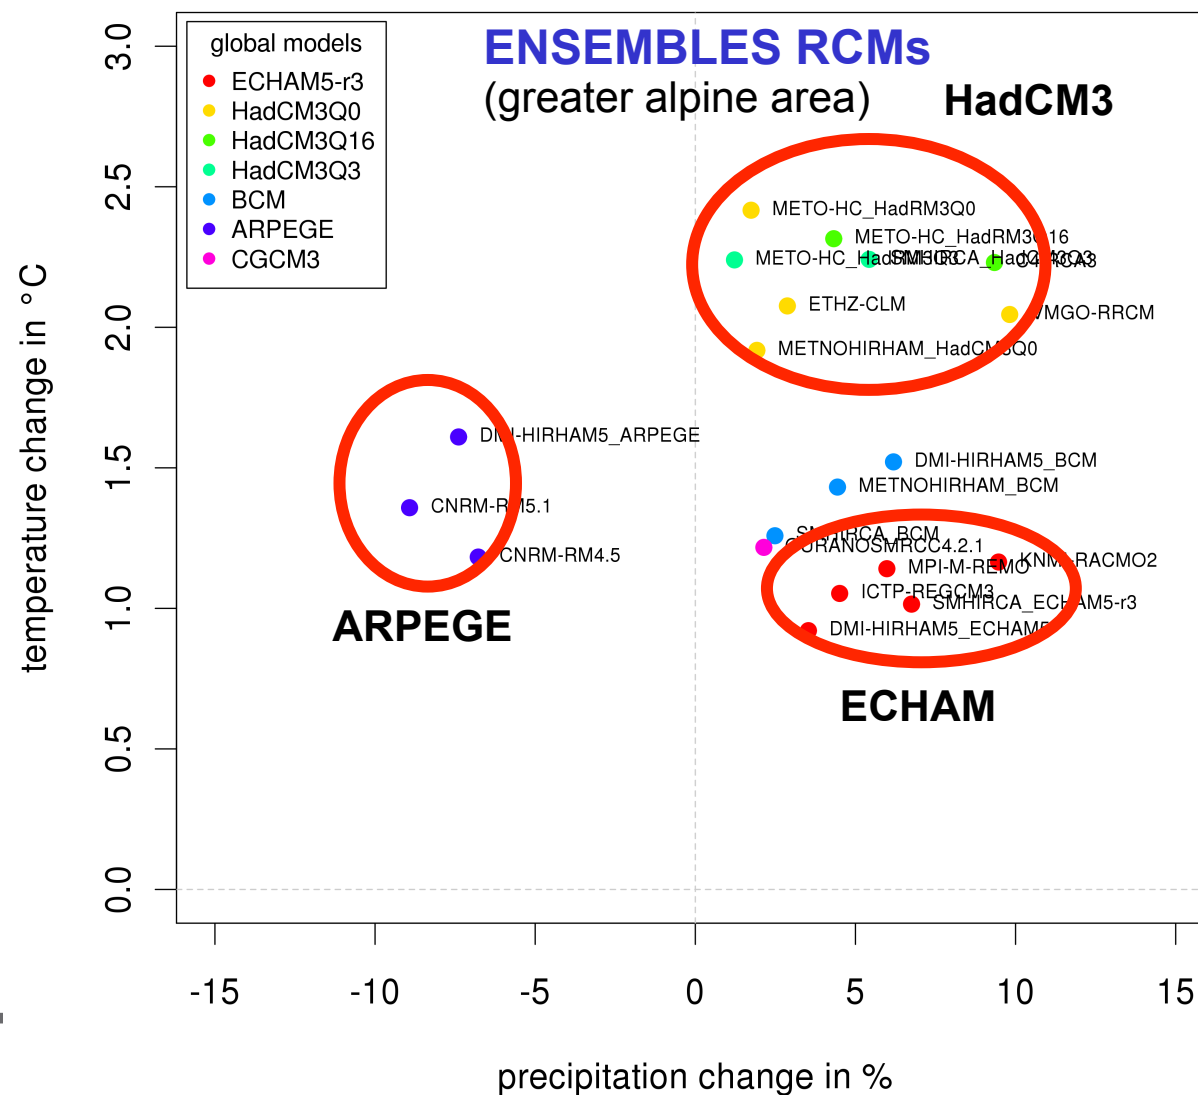

EURO-CORDEX

Simulation Matrix

Climate change signals of ENSEMBLES models
from 1961-1990 to 2021-2050 in GAR region for DJF period

GCMs rule!

GCM Selection – Performance Analysis

- Can help to detect “**unrealistic outliers**” (together with process-oriented analyses).
 - But: Skill in simulating present-day climate relates only weakly to the magnitude of predicted change [e.g., Knutti et al., 2010]. Currently, **no simple rule for selecting GCMs** based on performance is available.
- It's not wise to pick out “better” GCMs (*remember Richard's can of worms*)

CMIP3 Model Performance Indices over Europe

[Prein and Gobiet, submitted]

GCM Selection – Performance Analysis

- Can indicate “**unrealistic outliers**” (together with process-oriented analyses).
 - But: Skill in simulating present-day climate relates only weakly to the magnitude of predicted change [e.g., Knutti et al., 2010]. Currently, **no simple rule for selecting GCMs** based on performance is available.
- It's not wise to pick out “better” GCMs (*remember Richard's can of worms!*)

CMIP3 Model Performance Indices over Europe

[Prein and Gobiet, submitted]

GCM Selection – Independence

- The “**effective size**” of the CMIP3 ensemble is much smaller than the number of GCMs [Penell and Reichler, 2010].
- **Analysis of independence** might offer an option to avoid selecting GCMs that carry more less the same information.

(But such analysis might be too complex for EURO-CORDEX, we need to select the driving GCMs very soon!).

GCM Selection – Climate Change Signals

CMIP3-A1B 1961–90 to 2071–2100
region: CORDEX.Europe, season: DJF

GCM Selection – Climate Change Signals

EURO-CORDEX

Simulation Matrix

GCM Selection – Climate Change Signals

- Avoid **biases**

● iap_fgoals1_0_g

EURO-CORDEX

Simulation Matrix

GCM Selection – Climate Change Signals

- Avoid **biases**
- Avoid to underestimate the **range**

● iap_fgoals1_0_g

GCM Selection – Climate Change Signals

- Avoid **biases**
- Avoid to underestimate the **range**
- Indicate “**unrealistic outliers**”

EURO-CORDEX

Simulation Matrix

GCM Selection – Climate Change Signals

- Avoid **biases**
 - Avoid to underestimate the **range**
 - Detect “**unrealistic outliers**”
 - **Challenges:**
 - Which parameters should be analysed?
 - Results can be different in different seasons.
 - Design of a statistically sound method for GCM selection
 - Timely availability of CMIP5 ensemble.
- Establish **EURO-CORDEX GCM evaluation team**
and cooperate with the CMIP5 community

● iap_fgoals1_0_g

Matrix “symmetry”

- Biases due to overweighting “popular” GCMs.
 - Such biases can be cured by data reconstruction techniques [e.g., Déqué et al., 2007; 2011]
 - Data reconstruction works best, if each row/column is evenly populated
- If you have the choice, rather downscale a rarely used GCM, than a popular one.

	R1	R2	R3	R4
G1	×	×	×	×
G2		×		×
G3	×		×	
G4			×	

	R1	R2	R3	R4
G1	×	×	×	×
G2		×		×
G3	×		×	
G4		×	×	

Combine RCM and ESD

- Rasmus says: “RCMs and ESDs have independent weaknesses ” (and strengths!)
- Combining them:
 - inflates the matrix
 - enables to include more GCMs
 - makes it more defensible

→ Statistical modellers: Provide input to the EURO-CORDEX simulation list!

RCM

	R1	R2	R3	R4
G1	x		x	x
G2		x		x
G3	x		x	
G4		x	x	

RCM

ESD

Points for Discussion (Summary)

Analysis of Climate Projections

Joint Analysis of Climate Projections – Next Steps

- **Link groups** interested in joint EURO-CORDEX evaluation

→ Establish **EURO-CORDEX** evaluation team:

- Agree on focus periods.
Giorgi et al., [2009]: 1951-1980, **1981-2010**, 2011-2040, **2041-2070**, 2071-2100
- Agree on sub-regions.
Rockel regions?
- Start discussion on joint standard analysis
 - Ensemble based **standard products** (“with articulated uncertainties”)
- Groups doing more specific analyses might want to link up

Analysis of Climate Projections

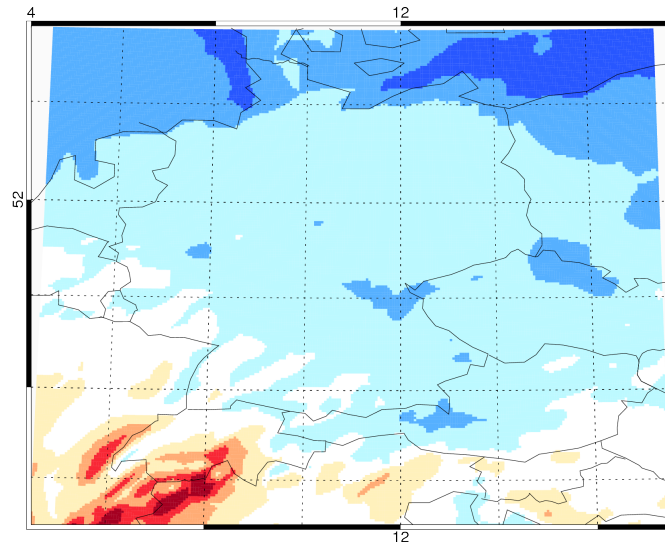

Some Examples (more or less arbitrary, based on ENSEMBLES)

Change in precipitation extremes (2036-65 vs 1961-90)

All ENSEMBLES Models covering this period

Information on reliability of scenarios

Mean precip. change [mm/day]

Mean: 0.1 Stand.Dev.: 0.1 Max: 0.3 Min: -0.5

No. of models agreeing in sign [%]

Mean: 75.8 Stand.Dev.: 14.9 Max: 100.0 Min: 53.3

Analysis of Climate Projections

Some Examples (more or less arbitrary, based on ENSEMBLES)

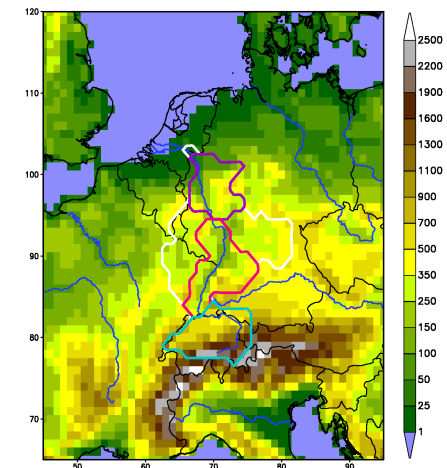

Evolution of monthly (July) temperature distribution (1961 – 2089)

Selected ENSEMBLES
Models

Extract common
message from
different simulations

Introduction

Basic Information and Current Status

Joint Evaluation

Design of the Simulation Matrix

Joint Analysis of Climate Projections

Interface to Impact/Adaptation Community

The EURO-CORDEX Community

Points for Discussion (Summary)

Points for Discussion (Summary)

Establish “EURO-CORDEX Teams” dedicated to specific topics

- Establish **evaluation team**. Who?
- Establish a **GCM analysis team** (own analysis and cooperation with GCM community). Who?
- *Establish a **climate projection analysis team**. Who?*
- *Establish a **post-processing/error correction team**(?)*
- *Further teams(?)*

→ **Discuss at the working meeting tonight**

Points for Discussion (Summary)

Filling the Simulation Matrix

- If you plan an EURO-CORDEX simulation, please send specifications to:
andreas.gobiet@uni-graz.at
daniela.jacob@zmaw.de
 - If you are free in the choice of driving GCM: that's good! Please discuss the selection of GCM with the EURO-CORDEX community (see GCM analysis group).
→ smart design of the simulation matrix
 - CORDEX focuses on RCM and ESD. Statistical modelers, please provide input to the EURO-CORDEX simulation list.
-

First Input to AR5

Please send relevant literature for IPCC AR5 WG2, chapter 23, Europe to Daniela: daniela.jacob@zmaw.de

EURO-CORDEX Working Meeting

Today, 6-7pm (after CMIP5 discussion),
L. Stasi seminar room 2nd floor

Thanks for your attention!
