Public Health Surveillance and Climate

Spring School on Modelling tools and capacity building in
climate and public health

Gilma C. Mantilla C.MD
mantilla@iri.columbia.edu

PAHO/WHO Collaborating Centre on early warning systems for malaria and other climate sensitive diseases

Objectives

- Briefly review public health surveillance
- Reminder about uses of surveillance data
- Relationship between climate and public health surveillance
- Encourage broader thinking about a link between surveillance and climate

Public Health Surveillance Definition

Public Health Surveillance is the ongoing systematic collection, analysis, interpretation, and dissemination of health data.

- *This is a mechanism that public health agencies use to monitor the health of their communities. Its purpose is to provide a factual basis from which agencies can appropriately set priorities, plan programs, and take action to promote and protect the public's health*

Principles of Epidemiology, Second Edition, CDC, 1992.

Emerging Infectious Diseases: Time for Global Surveillance

Influenza 1918-1919

Purposes of Public Health Surveillance

- Assess public health status
- Trigger public health action
- Define public health priorities
- Comply with International Regulations (IHR)
- Evaluate programs

Public Health Surveillance

- Systematic
- Ongoing
- Collection
- Analysis
- Interpretation
- Dissemination information
- Link to public health practice - policy

Surveillance is

Information for Action

“The reason for collecting, analyzing and disseminating information on a disease is to control that disease.

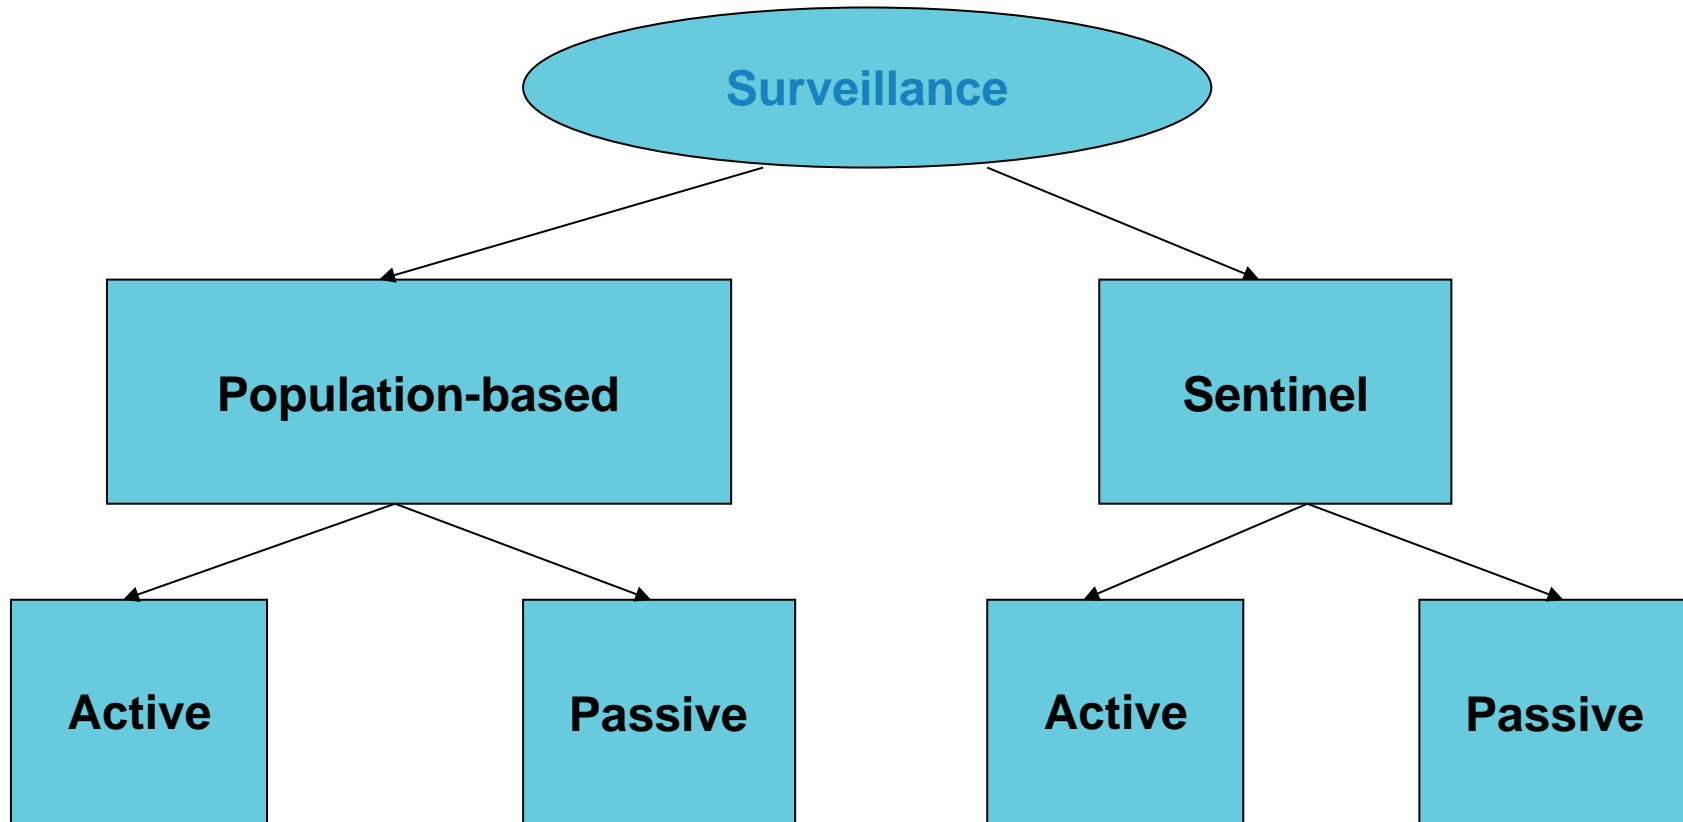

Collection and analysis should not be allowed to consume resources if action does not follow.”

- *William Foege et al., Int. J of Epidemiology*
1976; 5:29-37

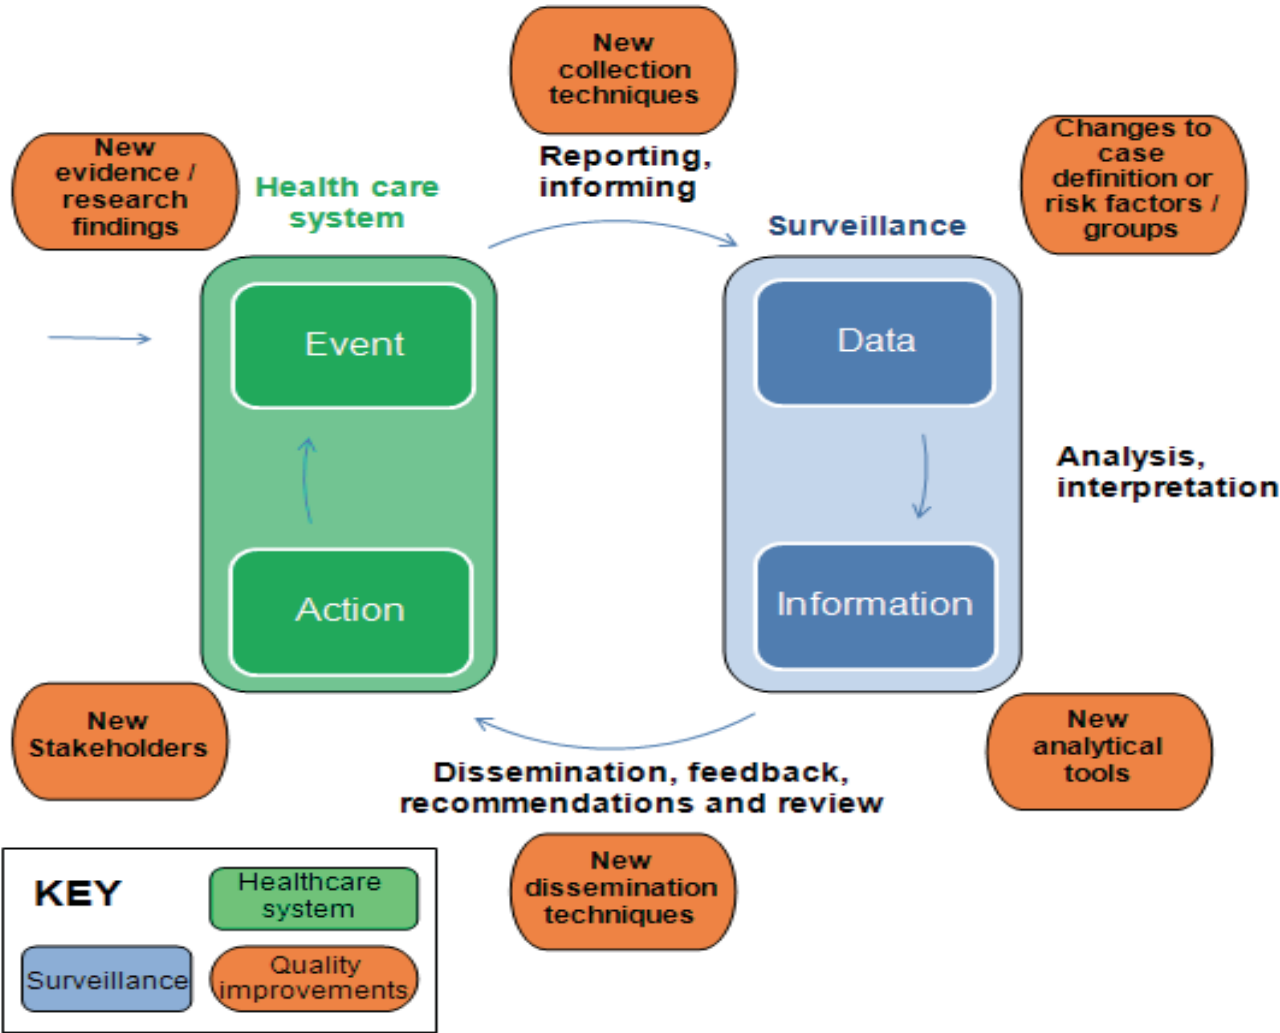

Process of Public Health Surveillance

1. Data collection
2. Data analysis
3. Data interpretation
4. Data dissemination
5. Link to action ..info

Types of Surveillance

Model for developing surveillance system

- Regulatory Foundation
- Case Definitions
- Case Report Forms
- Reporting Pathway
- Resources & Training

Data Sources

- Notifiable diseases
- Laboratories
- Vital records
- Registries
- Surveys
- Administrative data systems
- Other data sources

Types of Data on Surveillance Case Report Forms

Identifying information

Demographic information

Clinical information

Exposure / risk factor information

Reporter information

Climate data?

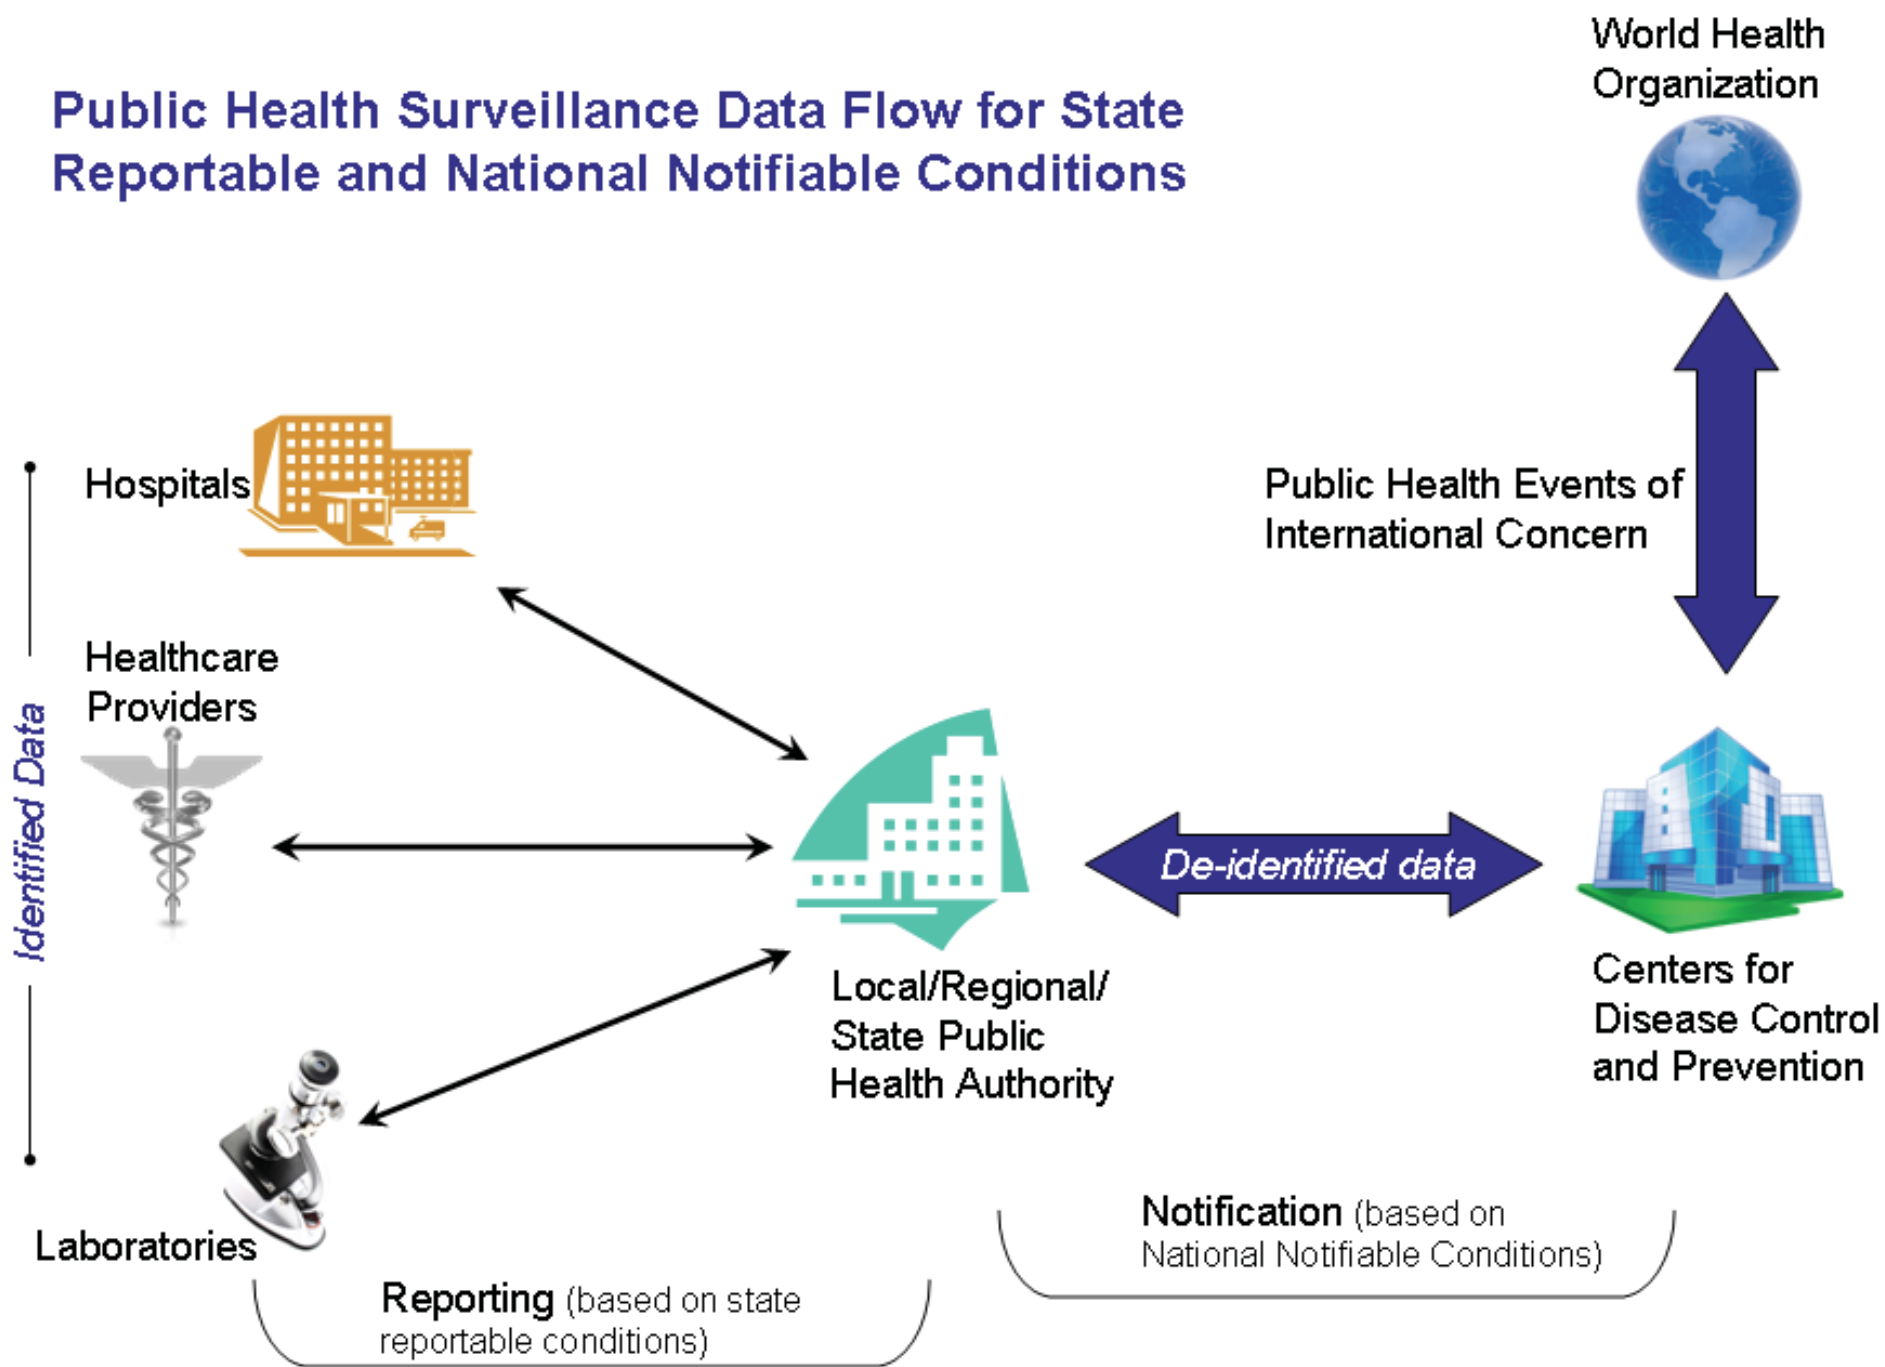

– Temp, precipitation?

INSTITUTO NACIONAL DE SALUD		SISTEMA NACIONAL DE VIGILANCIA EN SALUD PÚBLICA SUBSISTEMA DE INFORMACIÓN FICHA DE NOTIFICACIÓN DE DATOS COMPLEMENTARIOS		Ministerio de la Protección Social República de Colombia	
MALARIA COMPLICADA COD. INS-495 MORTALIDAD POR MALARIA COD. INS-540					
RELACIÓN CON DATOS BÁSICOS					
A. NOMBRES Y APELLIDOS DEL PACIENTE		B. TIPO DE ID*		C. No. DE IDENTIFICACION	
*TIPO DE: 1- RC, REGISTRO CAL; 2- TI, TARJETA DE D; 3- CC, CÉDULA QUIMONIVA; 4- CE, CÉDULA EXTRANJERA; 5- PA, PASAPORTE; 6- MO, MENOR SINVI; 7- AJ, ADULTO SINVI					
4. ANTECEDENTES					
4.1. ¿VIAJÓ DURANTE LOS ÚLTIMOS 15 DÍAS O HA VISITADO ZONA DE MALARIA?: 1- SI 2- NO 3- DESCONOCIDO		4.2. DEPARTAMENTO/MUNICIPIO AL QUE VIAJÓ: DEPTO. MUNICIPIO			
4.3. ¿PADECIÓ EN EL PASADO DE MALARIA?: 1- SI 2- NO 3- DESCONOCIDO		4.4. FECHA APROXIMADA DÍAS MES AÑO		4.5. ¿AUTOMEDICACIÓN EN EL EPISODIO ACTUAL?: 1- SI 2- NO 3- DESCONOCIDO	
4.6. ¿TIENE ANTECEDENTE TRANSFUSIONAL?: 1- SI 2- NO 3- DESCONOCIDO		4.7. FECHA APROXIMADA DÍAS MES AÑO		4.8. TIPO DE COMPLICACIÓN: 1- CEFÁLEA 2- HEMÁTICA 3- EPATICA 4- PULMONAR	
5. DATOS CLÍNICOS					
5.1. SIGNOS Y SINTOMAS:					
1- FIEBRE	2- DERMATEA	3- SICALOFITO	4- ESCORRACIÓN	5- HEMATURIA	6- HEMEREMESIS
7- NAUSEAS	8- ASTENIA	9- HEMATURIA	10- HEMOLISIS	11- HEMATURIA	12- HEMATURIA
13- ICED	14- EPATOMEGALIA	15- SINDROME DE HELI	16- HEMATURIA	17- HEMATURIA	18- HEMATURIA
19- INSUFICIENCIA RESPIRATORIA	20- EPATICA	21- CONFUSIÓN	22- COMA	23- HEMATURIA	24- HEMATURIA
25- HEMATURIA	5.2. ESPECIE DE PLASMODIUM: 1- HEMATURIA 2- HEMATURIA 3- HEMATURIA 4- HEMATURIA		5.3. ¿LA PACIENTE SE ENCUENTRA EN ESTADO DE EMBARRAZO?: 1- SI 2- NO 3- DESCONOCIDO		
6. DATOS DE LA BORATORIO					
6.1. MUESTRA		6.2. PRUEBA		6.3. RESULTADO	
1- MUESTRA	2- MUESTRA	70- HEMATURIA	*Agente (20) Vivax	VALOR	mm ³
3- MUESTRA	4- MUESTRA	80- HEMATURIA	*Agente (21) Falciparum	VALOR	mg/dl
5- MUESTRA	6- MUESTRA	90- HEMATURIA	*Agente (22) Malaria	VALOR	Lit
7- MUESTRA	8- MUESTRA	10- HEMATURIA	*Agente (0) No Aplica	VALOR	mm ³
9- MUESTRA	10- MUESTRA	11- HEMATURIA		VALOR	mg/dl
11- MUESTRA	12- MUESTRA	12- HEMATURIA		VALOR	mg/dl
13- MUESTRA	13- MUESTRA	13- HEMATURIA		VALOR	mg/dl
15- MUESTRA	14- MUESTRA	14- HEMATURIA		VALOR	mg/dl
*Los códigos hacen referencia a los establecidos en la estructura de archivos planos del subsistema de información SIVIGILA 2007 Versión 1.0					
7. TRATAMIENTO ACTUAL					
7.1. TRATAMIENTO ANTIMALARICO SUMINISTRADO:					
1- CLOROQUINA	2- METILGLOUCINA	3- SULFADIAZINA	4- PRIMARQUINA	5- QUINA ORAL	6- QUINA INTRAVENOSA
7- METILGLOUCINA	8- ARTESUNATO	9- QUININA	10- CLOROQUINA	11- OTRO	Cual?
MALARIA COMPLICADA COD. INS-495 MORTALIDAD POR MALARIA COD. INS-540

Información... para la Acción.

Public Health Surveillance Data Flow for State Reportable and National Notifiable Conditions

Notifiable Infectious Diseases

Vector-borne

Malaria

Dengue fever

Lyme disease

Rocky Mountain spotted fever

Encephalitis: St. Louis, Murray Valley, Western

Equine

Rift Valley fever

Ross River fever

Ehrlichiosis

Hantavirus pulmonary syndrome

Leishmaniasis

African trypanosomiasis

Tularemia

Plague

Onchocerciasis (river blindness)

Water and Foodborne

Cholera

Other non-cholera *Vibrio spp.* (i.e., *V. vulnificus*, *V. parahaemolyticus*)

Leptospirosis

Schistosomiasis

Sea bather's eruption

Giardiasis

Cryptosporidiosis

Human enteric viruses (Enteroviruses, Norwalk and Norwalk-like viruses)

Campylobacteriosis

Cyclospora cayentanensis

Salmonella enteritidis

Airborne (and others)

Meningococcal meningitis

Coccidioidomycosis

Respiratory syncytial virus (colds)

Legionnaires' disease

Influenza

Combining Surveillance and Climate Data

Historical interest in Early Warning Systems

- 1990s new developments
- Data availability
- Epidemiological modeling
- Information technology
- Scientific evidence of climate change
- Public acceptance of human impact on climate
- Disasters such as Hurricane Katrina in US

Combining Surveillance with Climate Data

“Linkages between climate and infectious diseases are often poorly understood, and research to understand the causal relationships is in its infancy” *EID, June 2001*

Combining Surveillance with Climate Data

Climatic impact on infectious diseases

- Human behavior: indoors in winter and influenza
- Disease pathogens: temp increases affect reproduction
- Disease vectors: distribution and development

Other factors

- Population vulnerability
- Population movements
- Agricultural practices

Combining Surveillance with Climate Data

New concept reflecting “wholistic” approach to broader ecology of disease determinants

- Earth science and health not seen as connected

Surveillance as “counting” mechanism

- Expectation about disease frequency

What can climate add

- **Prediction, early intervention and control**

Combining Surveillance with Climate Data

Vector-borne disease often the focus for climate related health

Evidence base needs strengthening

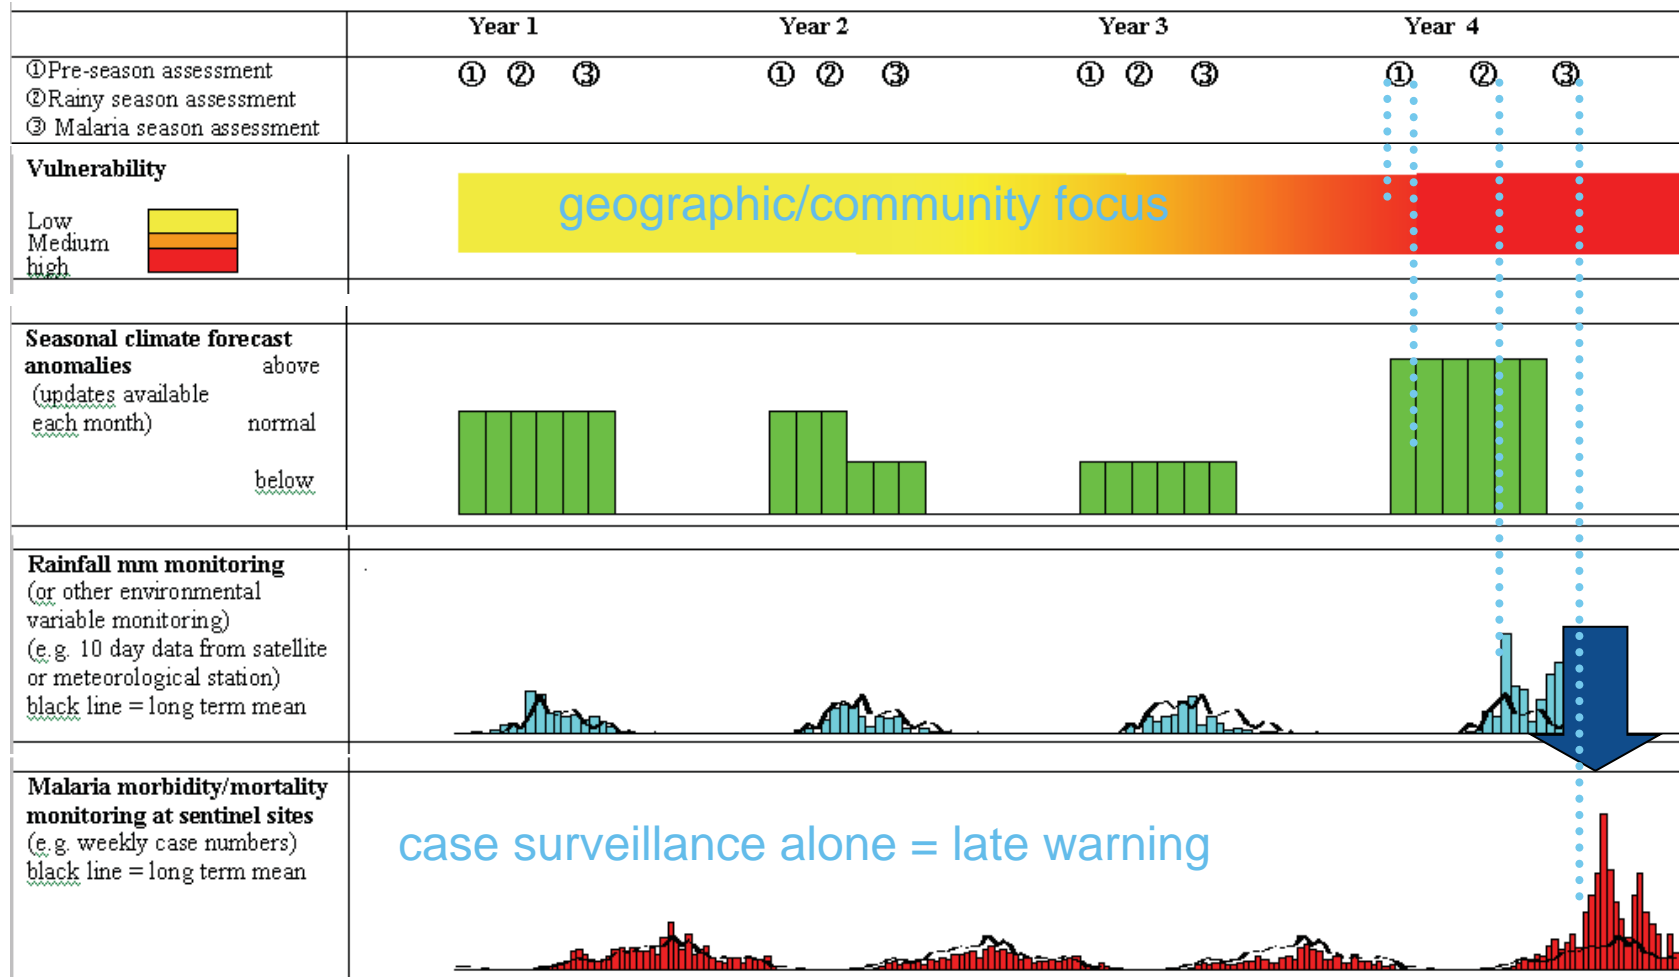

Disease where climate and surveillance research have been focused

- Malaria
- Dengue
- West Nile Virus
- St. Louis Encephalitis
- Tick-borne diseases

Climate and Infectious Diseases

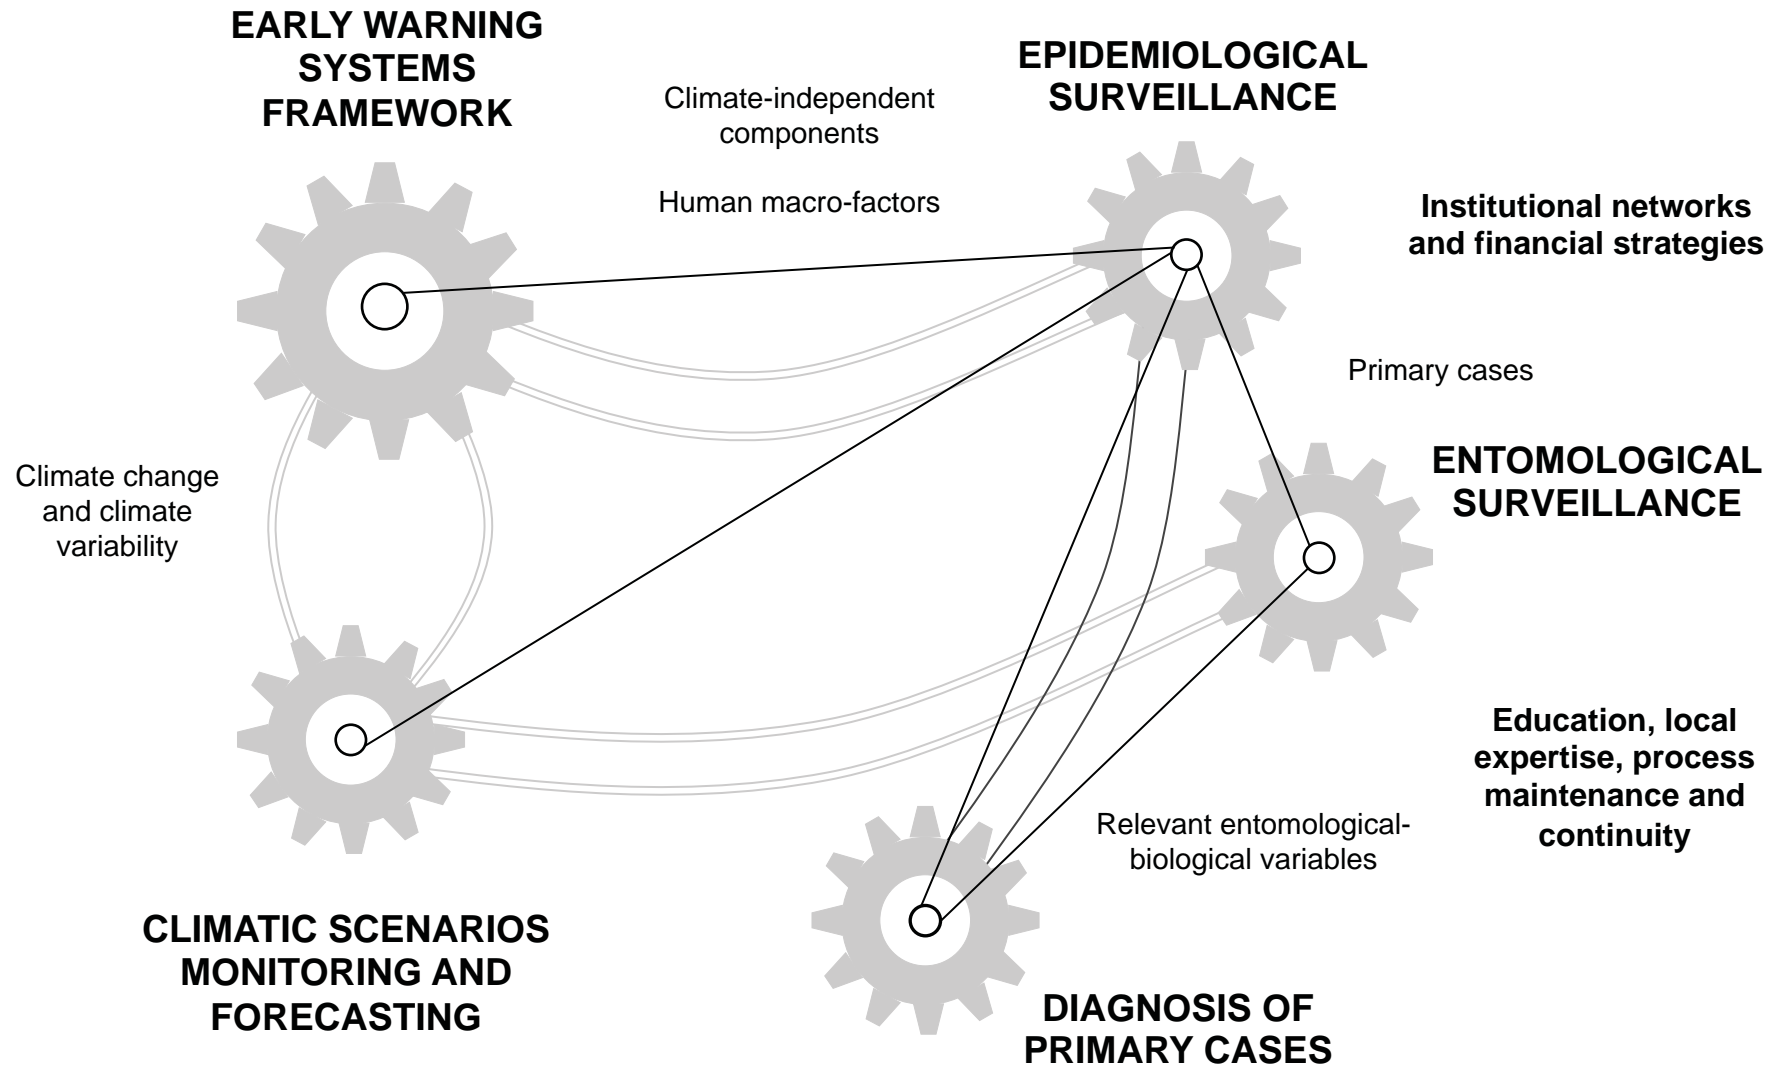

Diseases	Inter-annual variability	Sensitivity to climate	Climate variables	
Influenza	* * * * *	* *	(<T)	
Meningitis	* * * *	* * *	>T,<H (>R)	
Leishmaniasis	* *	* * *	(>T,>R)	
Loa loa	*	* * *	>R (<T)	
Cholera	* * * * *	* * * * *	(>T)	
Malaria	* * * * *	* * * * *	(>R,T,H)	
Dengue	* * * *	* * *	(>R,T,H)	

..... gathering cumulative evidence for early and focused response.

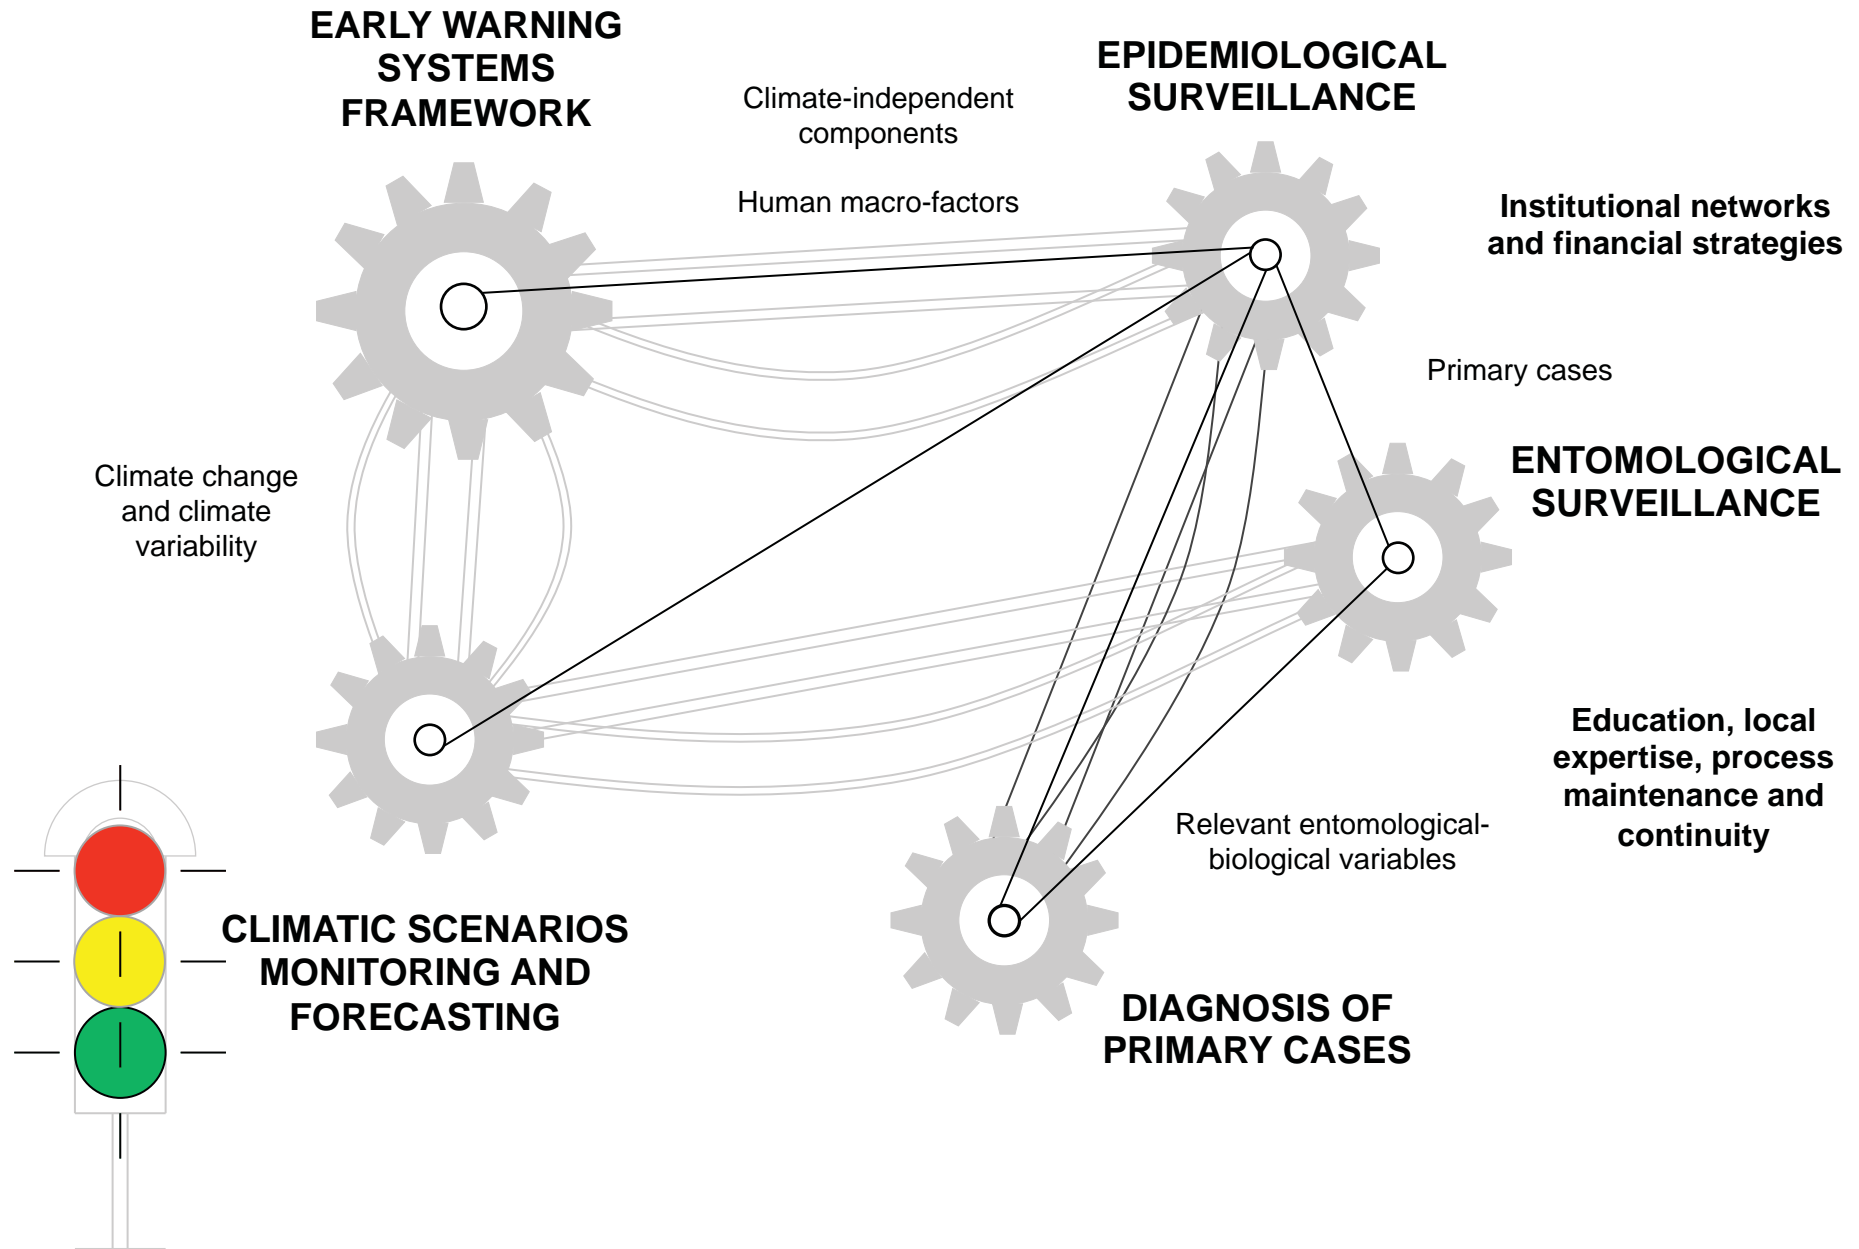

Malaria Early Warning Systems: the Rationale

INTEGRATED MALARIA SURVEILLANCE AND CONTROL SYSTEM

INTEGRATED DENGUE AND MALARIA SURVEILLANCE AND CONTROL SYSTEM

Challenges

Merge disciplines

- Public Health and climate science

Merging and finding data sources

- Disparate, disconnected sources
- Quality, long term surveillance

Interpretation of results

CC Scenarios – local conditions

Summary

Using climate and health/surveillance data together is cutting edge of public health

Be clear about how climate does and does not affect disease incidence

Need for high quality surveillance data is critical

Need more robust systems that can be used to implement preventive disease control measures

“Good surveillance does not necessarily ensure the making of the right decisions, but it reduces the chances of [making the] wrong ones.”

- Alex Langmuir, 1963
