Textbook picture of vdW interactions

Textbook picture of vdW interactions

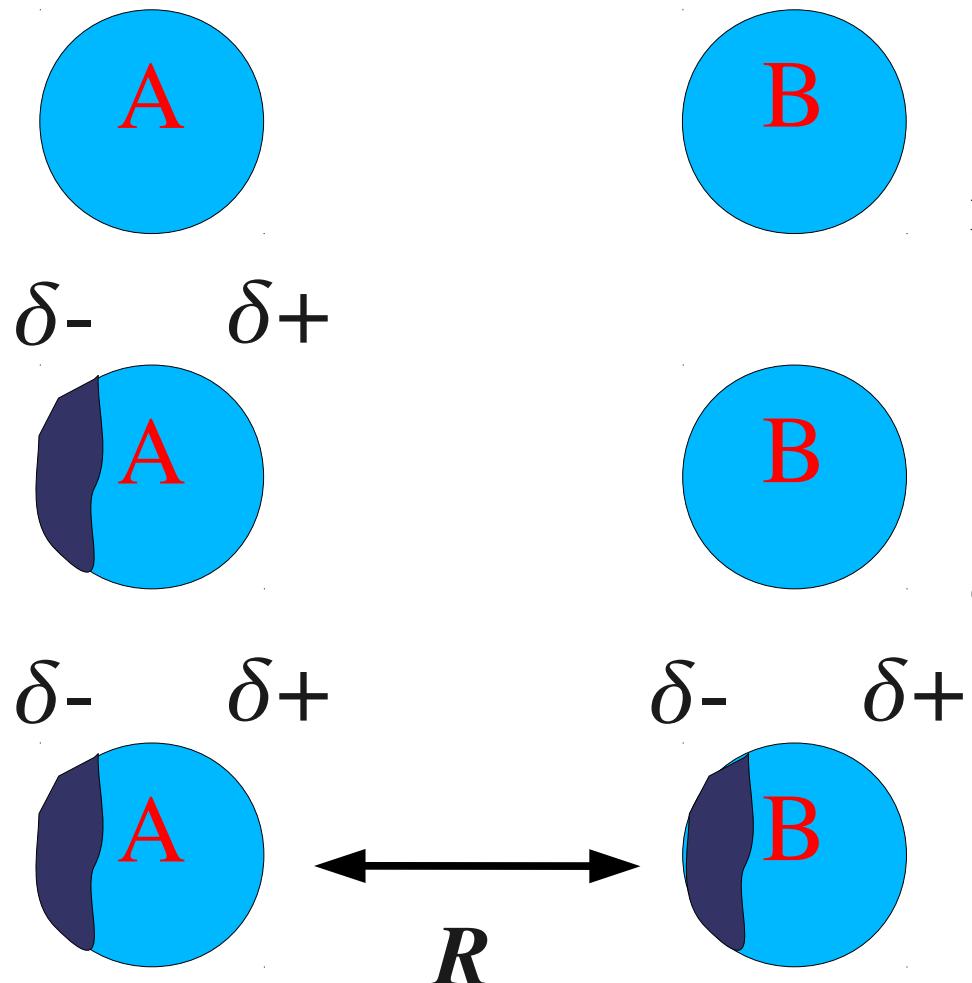

Textbook picture of vdW interactions

$$E_{\text{vdW}}^{(2)} = -\frac{C_6^{\text{AB}}}{R_{\text{AB}}^6}$$

$$\rightarrow C_6^{\text{AB}} = \frac{3}{\pi} \int \alpha_A(i\omega) \alpha_B(i\omega) d\omega$$

Textbook picture of vdW interactions

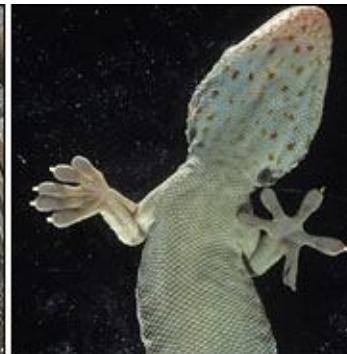

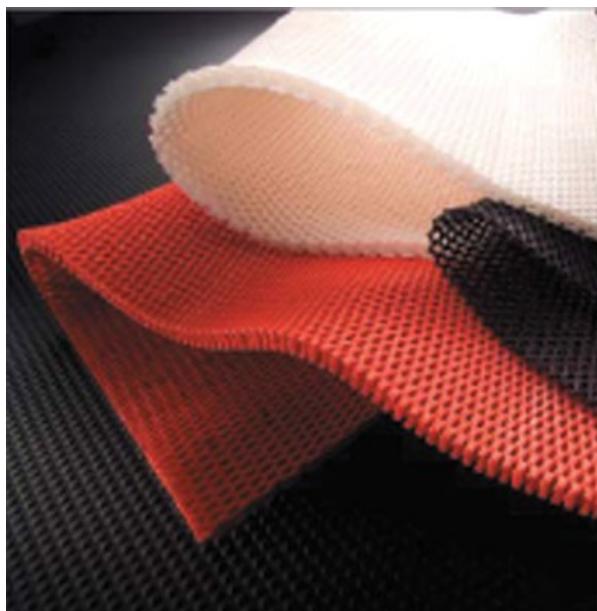

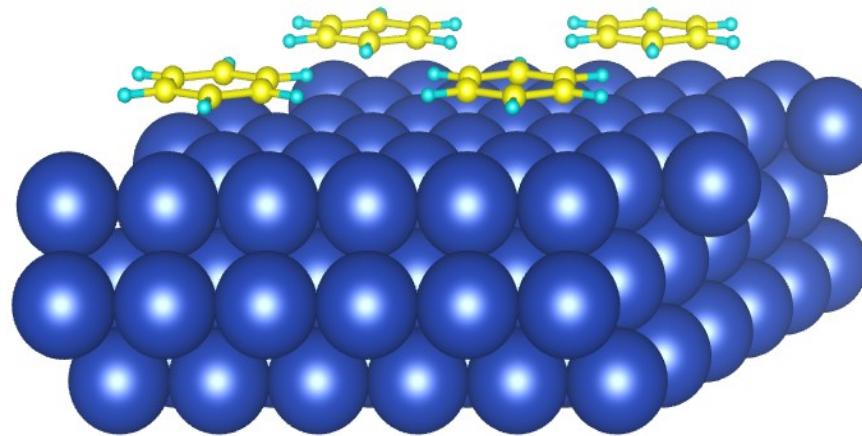

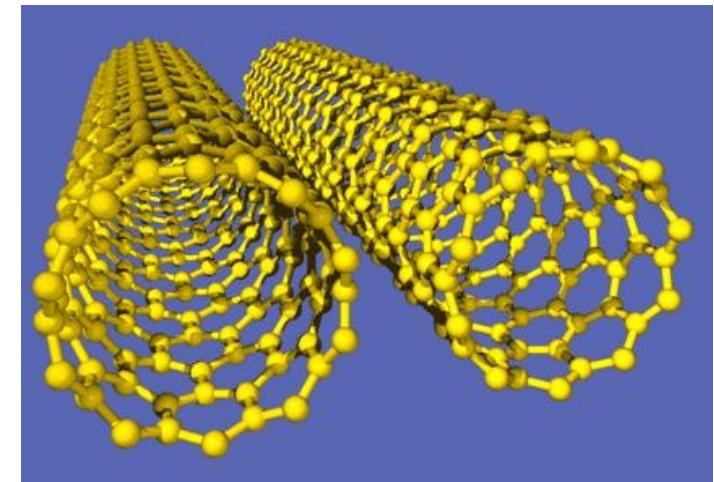

- **Ubiquitous** interatomic and intermolecular interaction
- Scales linearly with system size
... **and** it is a significant component of *binding energies* in large systems!

$$E_{\text{vdW}}^{(2)} = -\frac{C_6^{\text{AB}}}{R_{\text{AB}}^6}$$

$$\rightarrow C_6^{\text{AB}} = \frac{3}{\pi} \int \alpha_A(i\omega) \alpha_B(i\omega) d\omega$$

VdW Interactions in Soft and Hard Matter

Reality check for vdW from experiment

DFT and vdW interaction: Rare-gas dimers

$$E^{disp}(R) = - \left(f_6(R) \frac{C_6}{R^6} + f_8(R) \frac{C_8}{R^8} + f_{10}(R) \frac{C_{10}}{R^{10}} + \dots \right)$$

(Approximate) VdW-inclusive DFT methods

Review:

J. Klimes and A. Michaelides, J. Chem. Phys. 137, 120901 (2012)

Concepts and methods for dispersion in DFT

$$E_{\text{xc}} = E_{ex}^{\text{GGA or EX}} + E_{\text{corr}}^{\text{LDA,GGA}} + \boxed{E_{\text{corr}}^{\text{non-local}}}$$

Concepts and methods for dispersion in DFT

$$E_{\text{xc}} = E_{\text{ex}}^{\text{GGA or EX}} + E_{\text{corr}}^{\text{LDA,GGA}} + \boxed{E_{\text{corr}}^{\text{non-local}}}$$

- Non-local functionals (depend explicitly on \mathbf{r} and \mathbf{r}') (*Langreth, Lundqvist et al.*).
- Modified pseudopotentials (*von Lilienfeld et al.*)
- Highly empirical (hybrid) meta-GGA functionals (*Truhlar et al.*)
- Interatomic (pairwise or beyond) dispersion corrections (Many people)

Wu and Yang JCP (2002); *Grimme J. Comp. Chem.* (2004,2006); *Dion et al. PRL* (2004); *Zhao and Truhlar JCP* (2006); *von Lilienfeld et al. PRL* (2004); *Johnson and Becke JCP* (2005-2007); *Tkatchenko and Scheffler PRL* (2009); and many others ...

Langreth-Lundqvist functional (vdW-DF-04 and vdW-DF-10)

Langreth-Lundqvist functional

$$E_{\text{xc}} = E_{\text{ex}}^{\text{GGA}}[n(\mathbf{r})] + E_{\text{corr}}^{\text{LDA}}[n(\mathbf{r})] + E_{\text{corr}}^{\text{non-local}}[n(\mathbf{r})]$$

$$E_{\text{corr}}^{\text{non-local}}[n(\mathbf{r})] = \frac{1}{2} \int d^3r d^3r' n(\mathbf{r}) K(\mathbf{r}, \mathbf{r}') n(\mathbf{r}')$$

*Dion, Rydberg, Schroeder, Langreth, Lundqvist, PRL (2004).
Lee, Murray, Kong, Lundqvist, Langreth, PRB (2010).*

Langreth-Lundqvist functional (vdW-DF-04 and vdW-DF-10)

$$E_{\text{xc}} = E_{\text{ex}}^{\text{GGA}}[n(\mathbf{r})] + E_{\text{corr}}^{\text{LDA}}[n(\mathbf{r})] + E_{\text{corr}}^{\text{non-local}}[n(\mathbf{r})]$$

$$E_{\text{corr}}^{\text{non-local}}[n(\mathbf{r})] = \frac{1}{2} \int d^3r d^3r' n(\mathbf{r}) K(\mathbf{r}, \mathbf{r}') n(\mathbf{r}')$$

vdW-DF-04

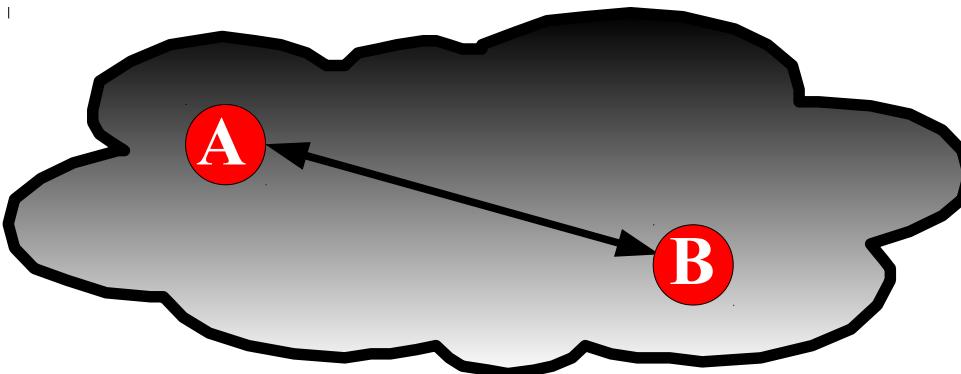

vdW-DF-10

- Exchange: revPBE
- Local corr.: LDA
- No free parameters
- C_6 error: $\sim 20\%$
- Exchange: PW86
- Local corr.: LDA
- 2 parameters
- C_6 error: $\sim 40\%^{(*)}$

(*) *Vydrov and van Voorhis, PRA (2010).*

Approximations for $E_{\text{corr}}^{\text{non-local}}$ in vdW-DF functional

$$E_{\text{corr}}^{\text{non-local}}[n(\mathbf{r})] = \frac{1}{2} \int d^3r d^3r' n(\mathbf{r}) K(\mathbf{r}, \mathbf{r}') n(\mathbf{r}')$$

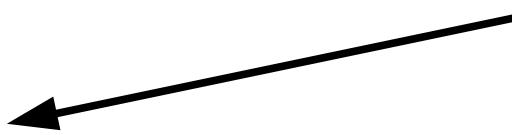

- 1) Local approximation for the response function
- 2) Only pairwise point-point interaction, not including non-additive many-body vdW energy

See *J. F. Dobson and T. Gould, J. Phys. Condens. Matter* 24, 073201 (2012).

Interatomic vdW correction methods

Interatomic vdW methods

$$E_{\text{xc}} = E_{\text{ex}}^{\text{GGA or EX}} + E_{\text{corr}}^{\text{LDA,GGA}} + E_{\text{corr}}^{\text{non-local}}$$

$$E^{\text{vdW}}(R) = - \left(f_6(R) \frac{C_6}{R^6} + f_8(R) \frac{C_8}{R^8} + f_{10}(R) \frac{C_{10}}{R^{10}} + \dots \right)$$

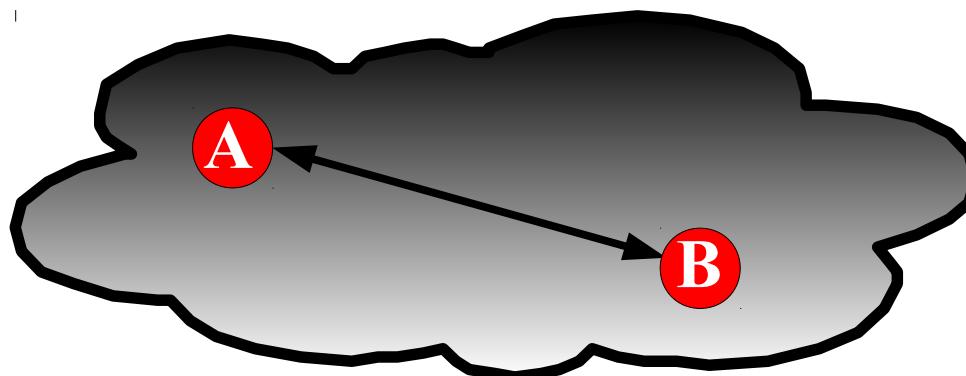

- Two parameters per atomic pair: (1) VdW C_6 interaction coefficient and (2) vdW radius.
- Clearly, if (1) and (2) are empirical, this leads to many fitting parameters. This was frequently the case before 2008.

Evolution of interatomic vdW methods

- Grimme's D1,D2 (2004-2006): Parameterization for many elements in the periodic table
 - Highly empirical, some very *ad hoc* approximations
- Jurečka *et al.* (2007): Accurate parameterization for organic molecules
 - Better theoretical ground, but still very empirical
- Johnson and Becke (2005-2008), Silvestrelli (2008): C_6 and vdW radii from HF or DFT orbitals
 - Reduced empiricism, errors of ~ 20%-40% in C_6 coefficients
- Tkatchenko and Scheffler (2009): C_6 coefficients and vdW radii from ground-state electron density
 - First-principles C_6 accurate to 5%
-

What is missing in interatomic vdW corrections ?

$$E^{vdW}(R) = - \left(f_6(R) \frac{C_6}{R^6} + f_8(R) \frac{C_8}{R^8} + f_{10}(R) \frac{C_{10}}{R^{10}} + \dots \right)$$

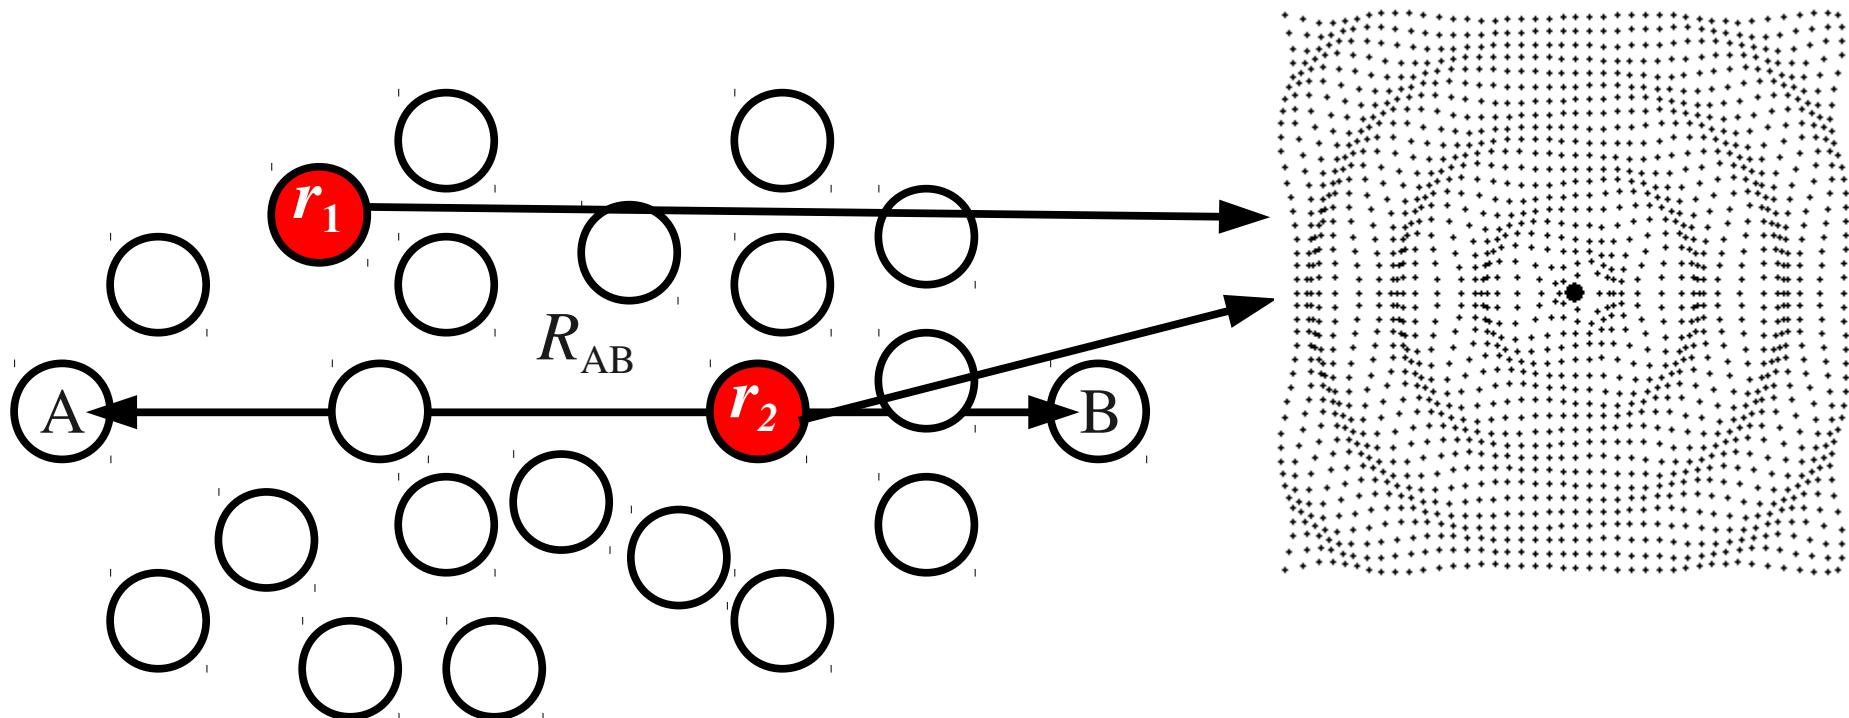

- 1) Long-range electrostatic screening among fluctuating dipoles
- 2) Non-additive many-body vdW energy beyond two-body

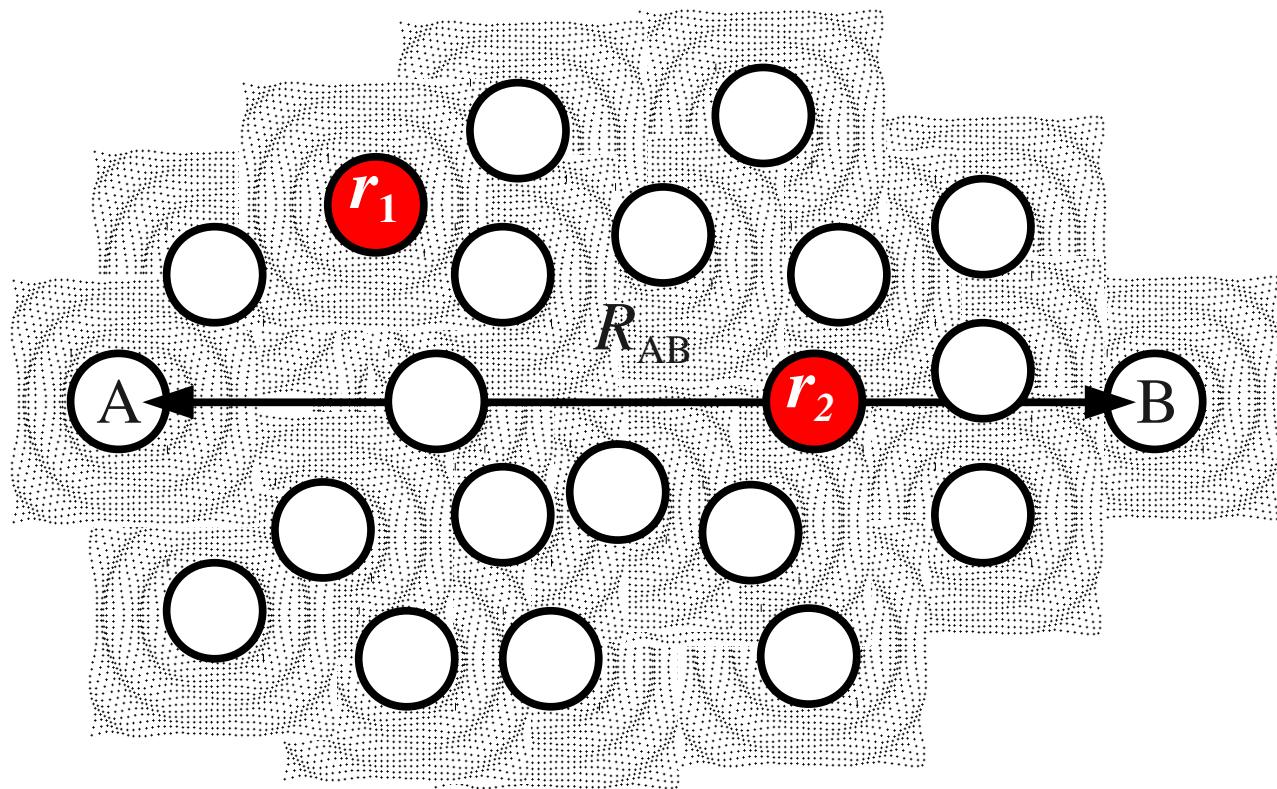

See *A. Tkatchenko, A. Ambrosetti, R. A. DiStasio Jr., J. Chem. Phys.* 138, 074106 (2013).

Towards Efficient Many-Body Treatment of vdW Interactions

The conventional approach

(Grimme, Johnson-Becke/Corminboeuf,
Tkatchenko-Scheffler, Langreth-Lundqvist
vdW-DF, Vydrov-van Voorhis, ...)

Effective screening and
two-body energy

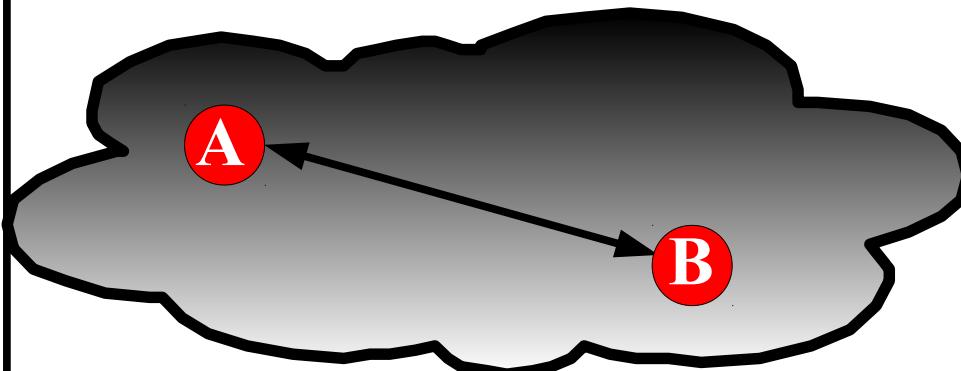

Valid for small molecules *or*
homogeneous dielectrics

Towards Efficient Many-Body Treatment of vdW Interactions

The conventional approach

(Grimme, Johnson-Becke/Corminboeuf,
Tkatchenko-Scheffler, Langreth-Lundqvist
vdW-DF, Vydrov-van Voorhis, ...)

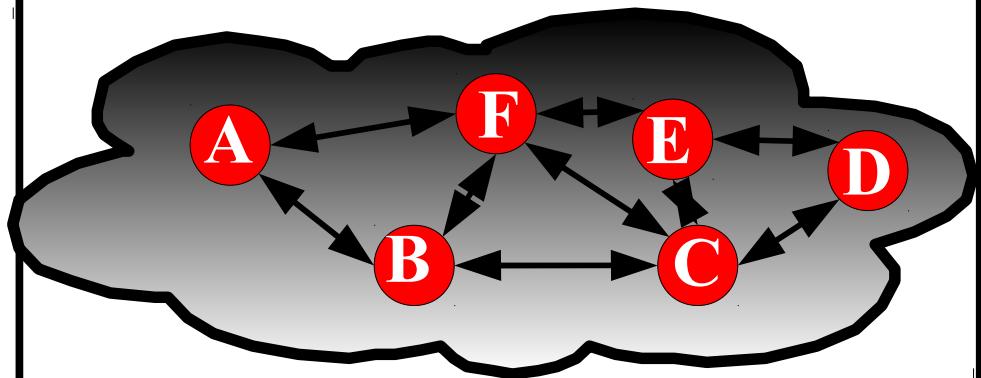

Effective screening and
two-body energy

Valid for small molecules *or*
homogeneous dielectrics

The new state-of-the-art:

Full many-body response
and energy for a system of
quantum oscillators (**DFT+MBD**)

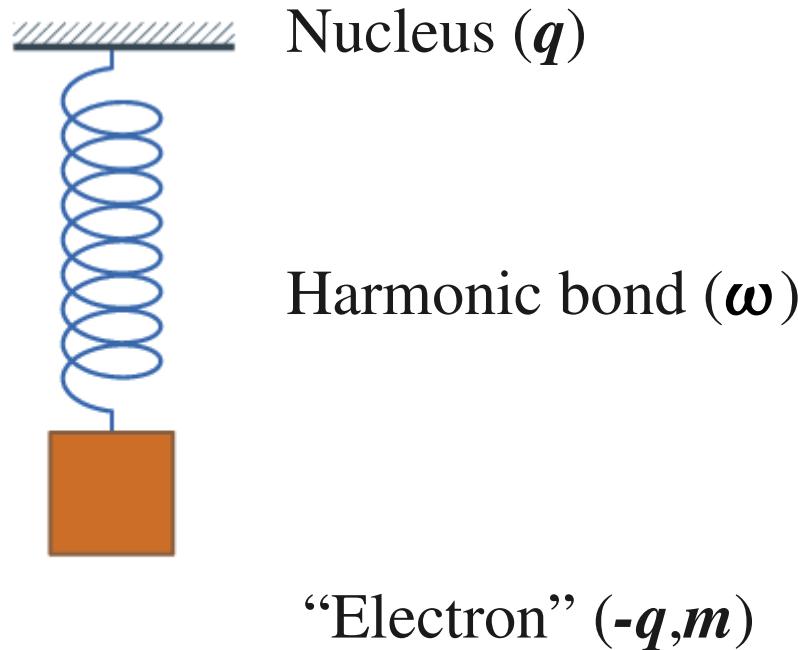

Valid for **small and large
molecules, insulators, metals,
interfaces, ...**

A. Tkatchenko and M. Scheffler, *Phys. Rev. Lett.* (2009).

A. Tkatchenko, R. A. DiStasio Jr., R. Car, M. Scheffler, *Phys. Rev. Lett.* (2012).

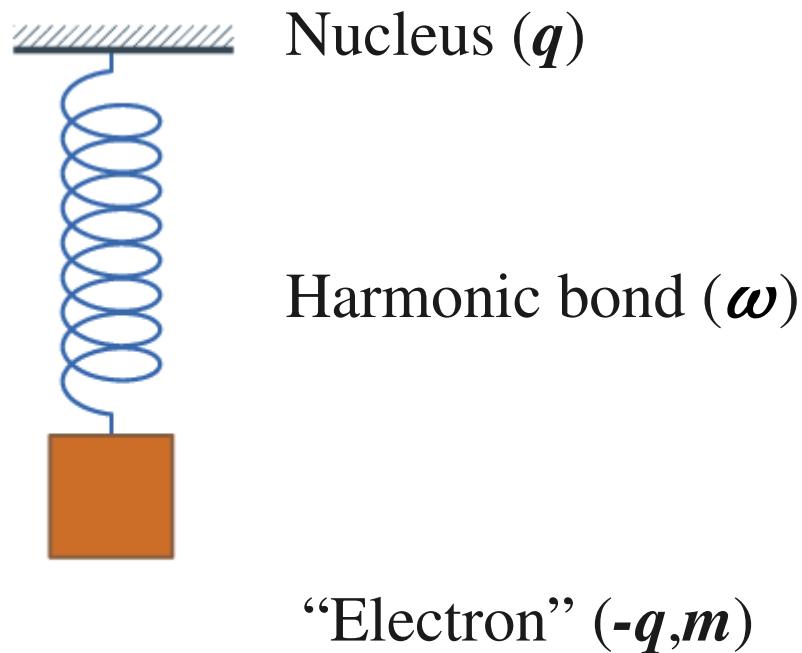

R. A. DiStasio Jr., O. A. von Lilienfeld, A. Tkatchenko, *Proc. Natl. Acad. Sci.* (2012).

The Model: Quantum Harmonic Oscillator (QHO)

Model proposed by *W. L. Bade* (1957); and used by *B. J. Berne*; *A. Donchev*; *M. W. Cole*; *G. Martyna*; *K. Jordan*; and others.

The Model: Quantum Harmonic Oscillator (QHO)

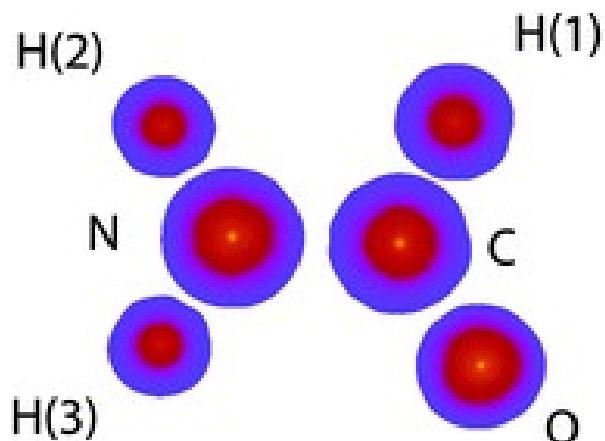

In the dipole approximation:

(α, ω) fully characterize the QHO

Model proposed by *W. L. Bade* (1957); and used by *B. J. Berne*; *A. Donchev*; *M. W. Cole*; *G. Martyna*; *K. Jordan*; and others.

First-Principles Model: QHOs in Molecules and Solids

$$\alpha_A^0 = \alpha_A^0[n(\mathbf{r})]; \quad \omega_A^0 = \omega_A^0[n(\mathbf{r})]$$

$$\alpha_A(i\omega) = \frac{\alpha_A^0}{1 + (\omega/\omega_A^0)^2}$$

α^0 and ω^0 include short-range hybridization

$$C_6 = C_6[n(\mathbf{r})], \quad R_{\text{vdW}} = R_{\text{vdW}}[n(\mathbf{r})]$$

A. Tkatchenko and M. Scheffler, *Phys. Rev. Lett.* (2009)

The Method: DFT+MBD

TS-vdW method

$$\alpha_A^0 = \alpha_A^0[n(\mathbf{r})]; \quad \omega_A^0 = \omega_A^0[n(\mathbf{r})]$$

Self-consistent electrodynamic response (Dyson)

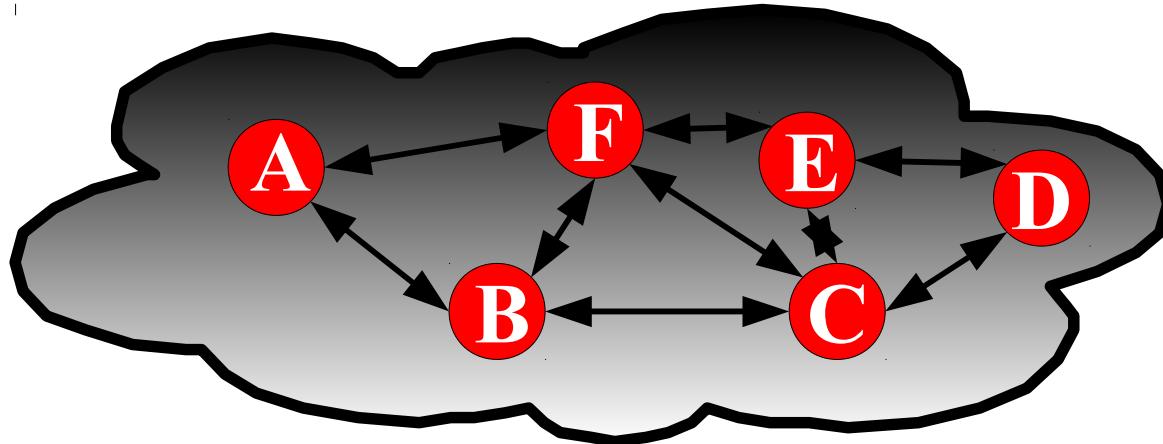

$$\alpha_p(i\omega) = \alpha_p^{\text{TS}}(i\omega) + \alpha_p^{\text{TS}}(i\omega) \sum_{q \neq p}^N \mathcal{T}_{pq} \alpha_q(i\omega)$$

Many-body vdW energy for a system of
coupled oscillators (RPA)

$$H = -\frac{1}{2} \sum_{i=1}^N \nabla_{\chi_i}^2 + \frac{1}{2} \sum_{i=1}^N \omega_i^2 \chi_i^2 + \sum_{i>j=1}^N \omega_i \omega_j \sqrt{\alpha_i \alpha_j} \chi_i T_{ij} \chi_j.$$

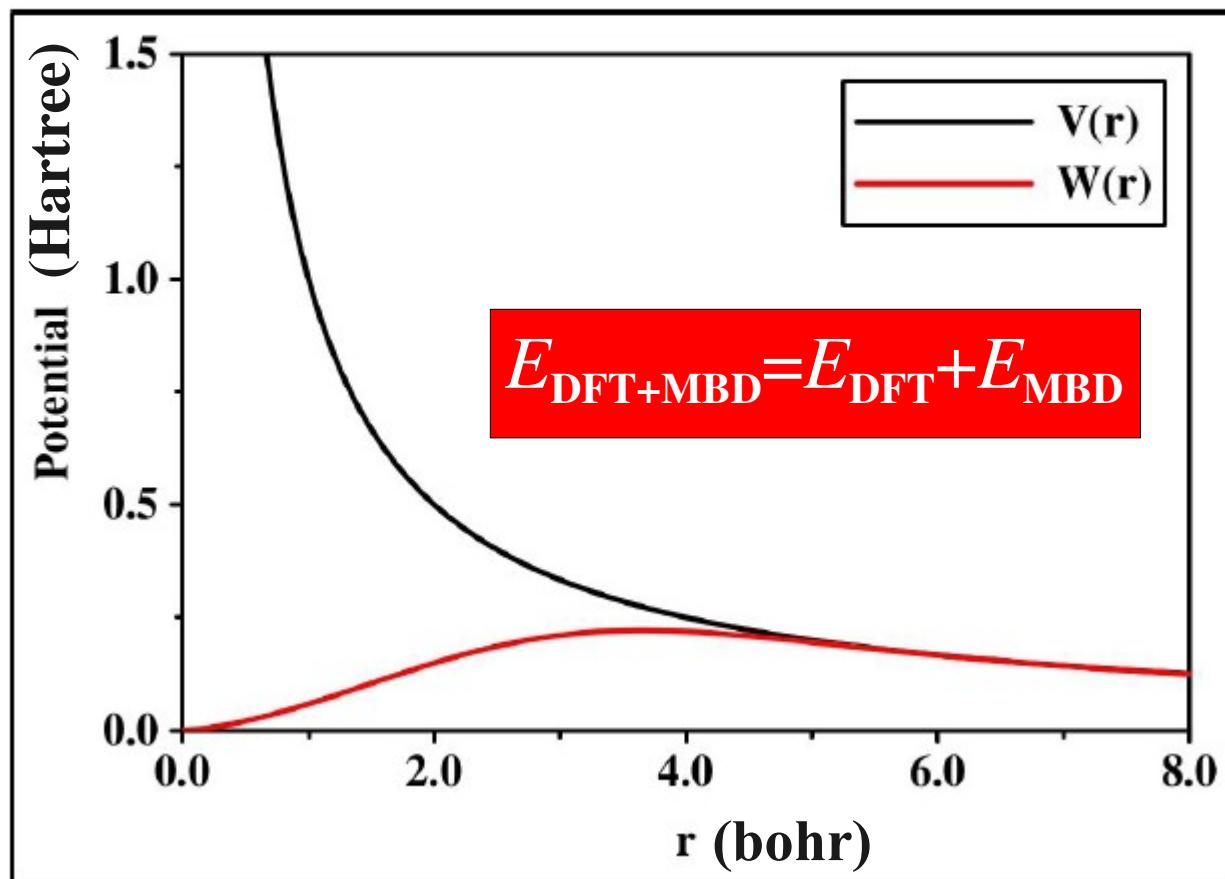

Salient Features of the MBD Method

- Seamless treatment of short-range (quantum) and long-range (classical) electrodynamic response
- Full correlation energy of coupled QHOs is equivalent to the random-phase approximation or ring-CCD (*JCP* 138, 074106 (2013))
- Computes many-body vdW energy to *infinite order*
- Negligible computational cost compared to DFT (**MBD** calculations can be easily done for > 10,000 atoms)

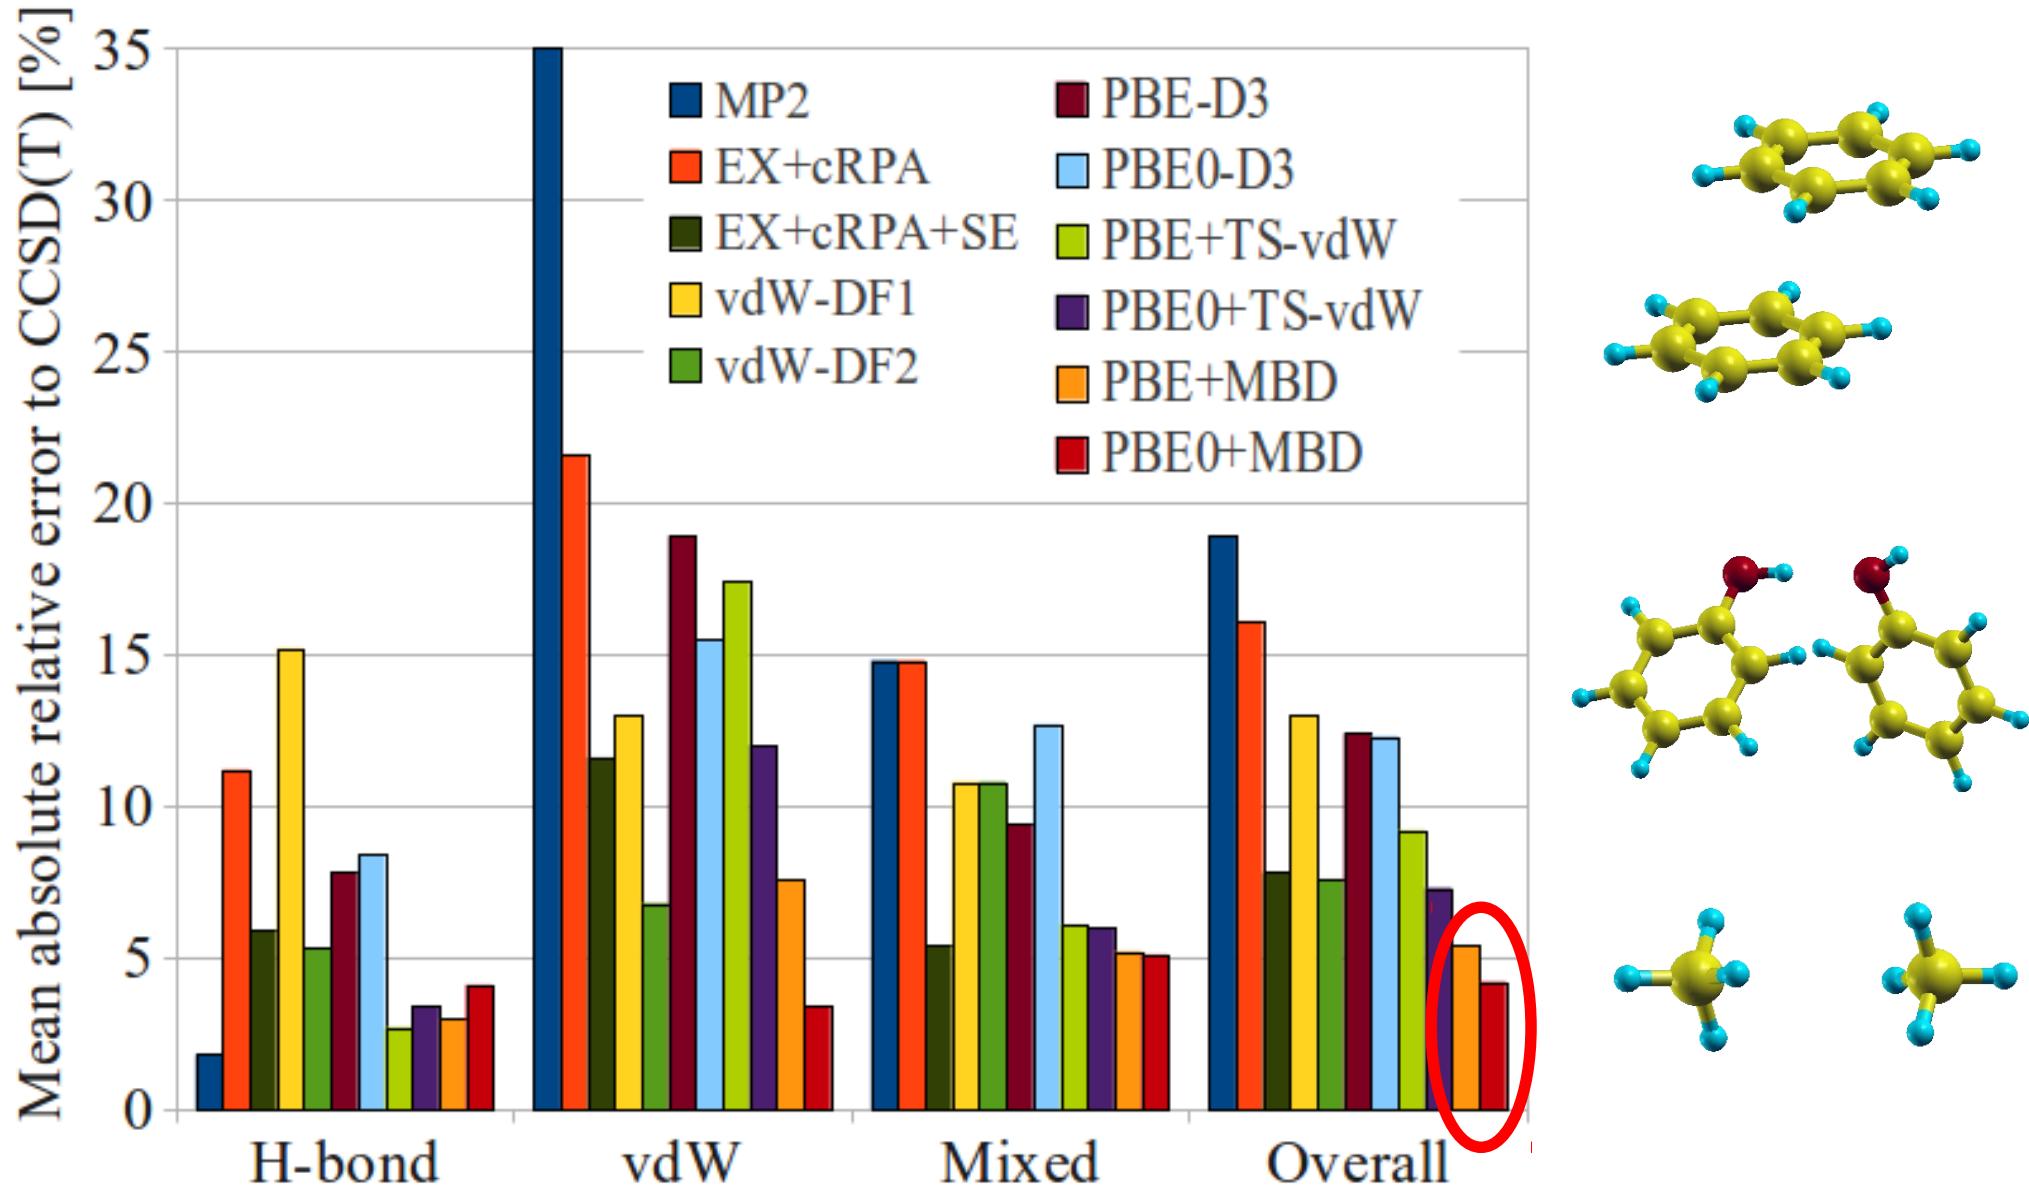

Coupling DFT and MBD by range separation of the Coulomb potential

$$W(r_{pq}) = \left(1 - \exp\left(-\left(r_{pq}/R_{pq}^{\text{vdW}}\right)^{\beta}\right)\right) / r_{pq}$$

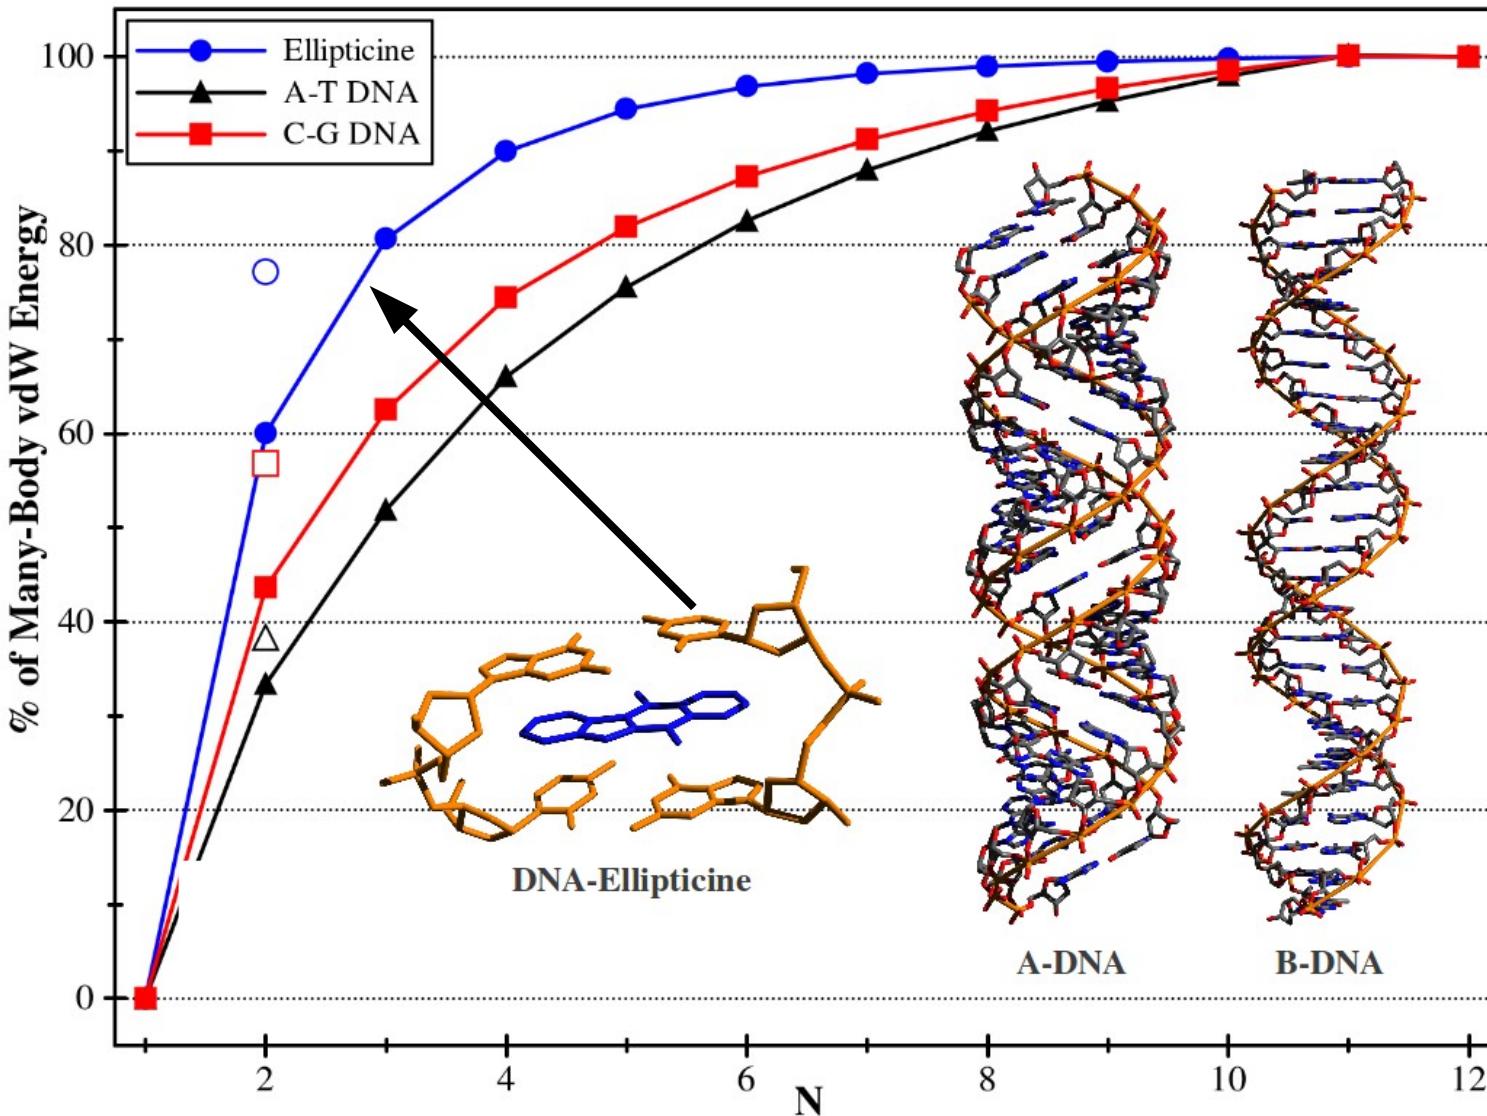

See work on range separation by *A. Savin, H. Stoll, G. Scuseria, K. Hirao, ...*

Performance of DFT+MBD for gas-phase intermolecular interactions

S22 CCSD(T): Jurecka, Sponer, Cerny, Hobza, *PCCP* (2006); Sherrill *et al.*, *JCP* (2010).

“Chemically Accurate” Predictions for Molecular Materials

A. M. Reilly and A. Tkatchenko, *J. Phys. Chem. Lett.* **4**, 1028 (2013);
J. Chem. Phys. **139**, 024705 (2013).

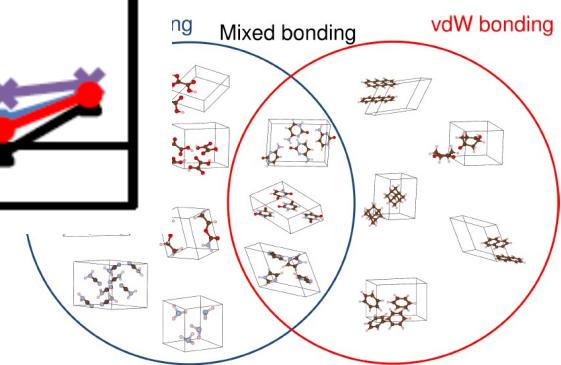

“Chemically Accurate” Predictions for Molecular Materials

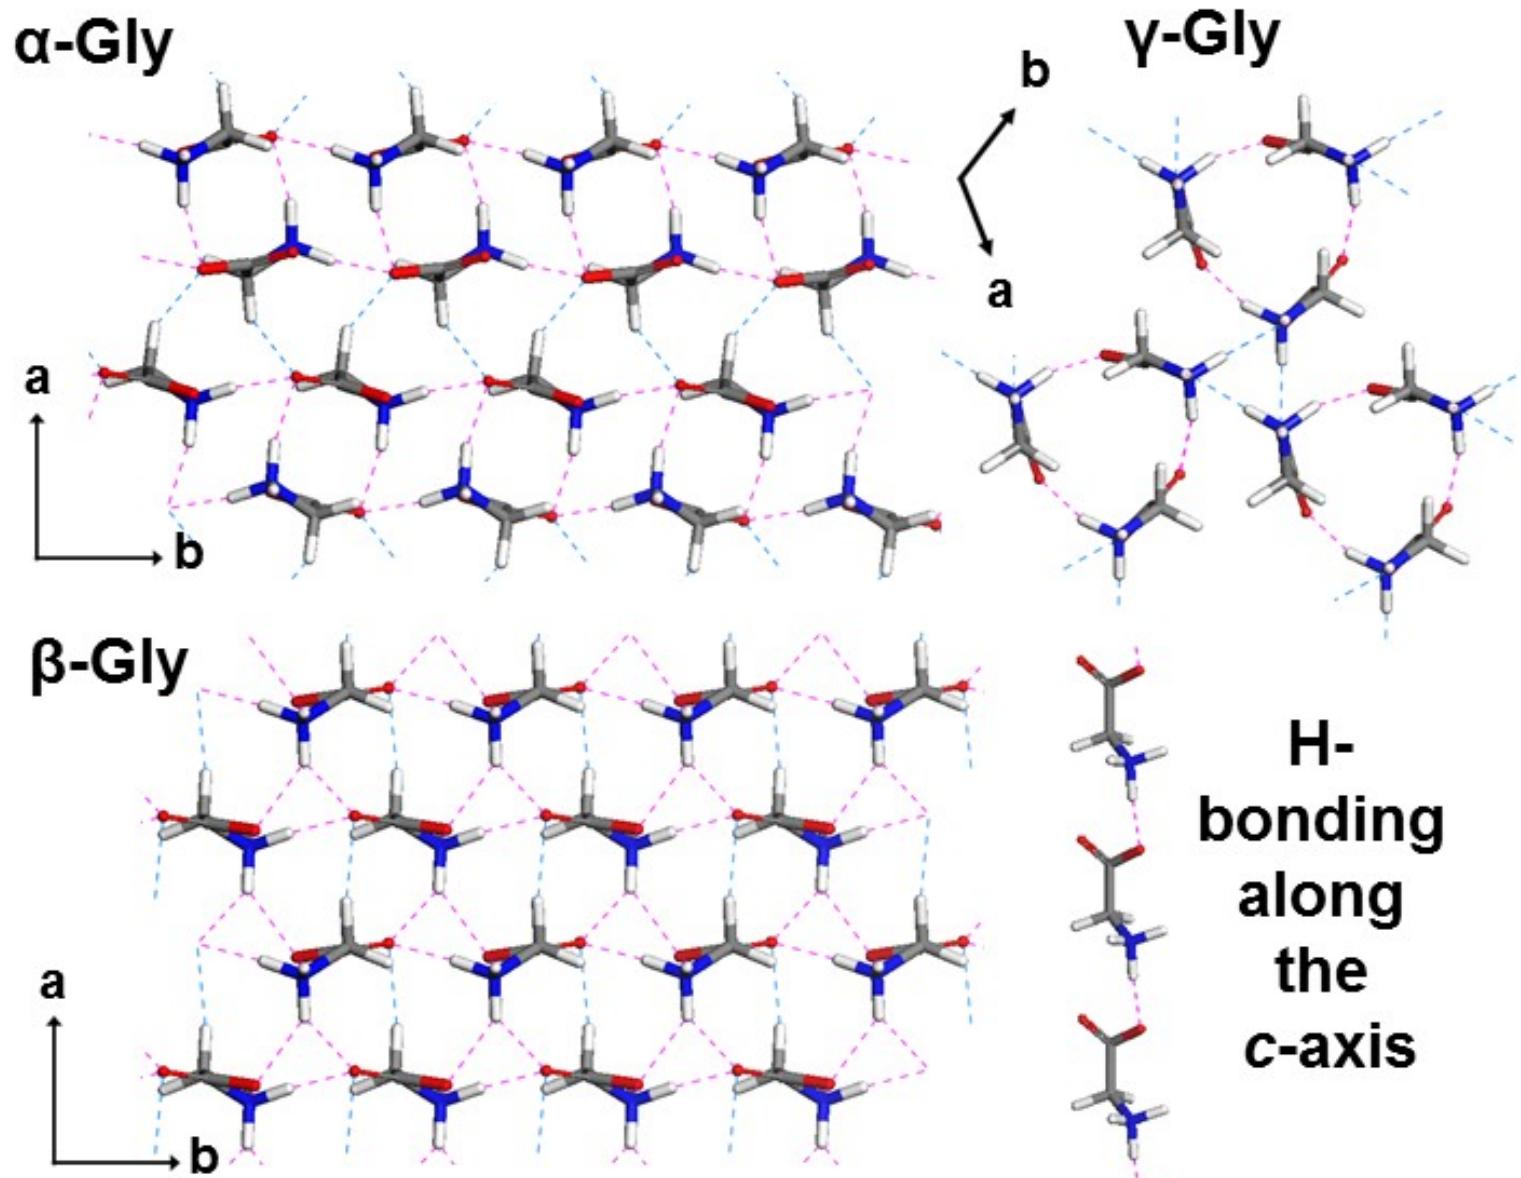

PBE0+MBD overall accuracy: **0.8 kcal/mol; 4.6%**

**Anthony
Reilly**

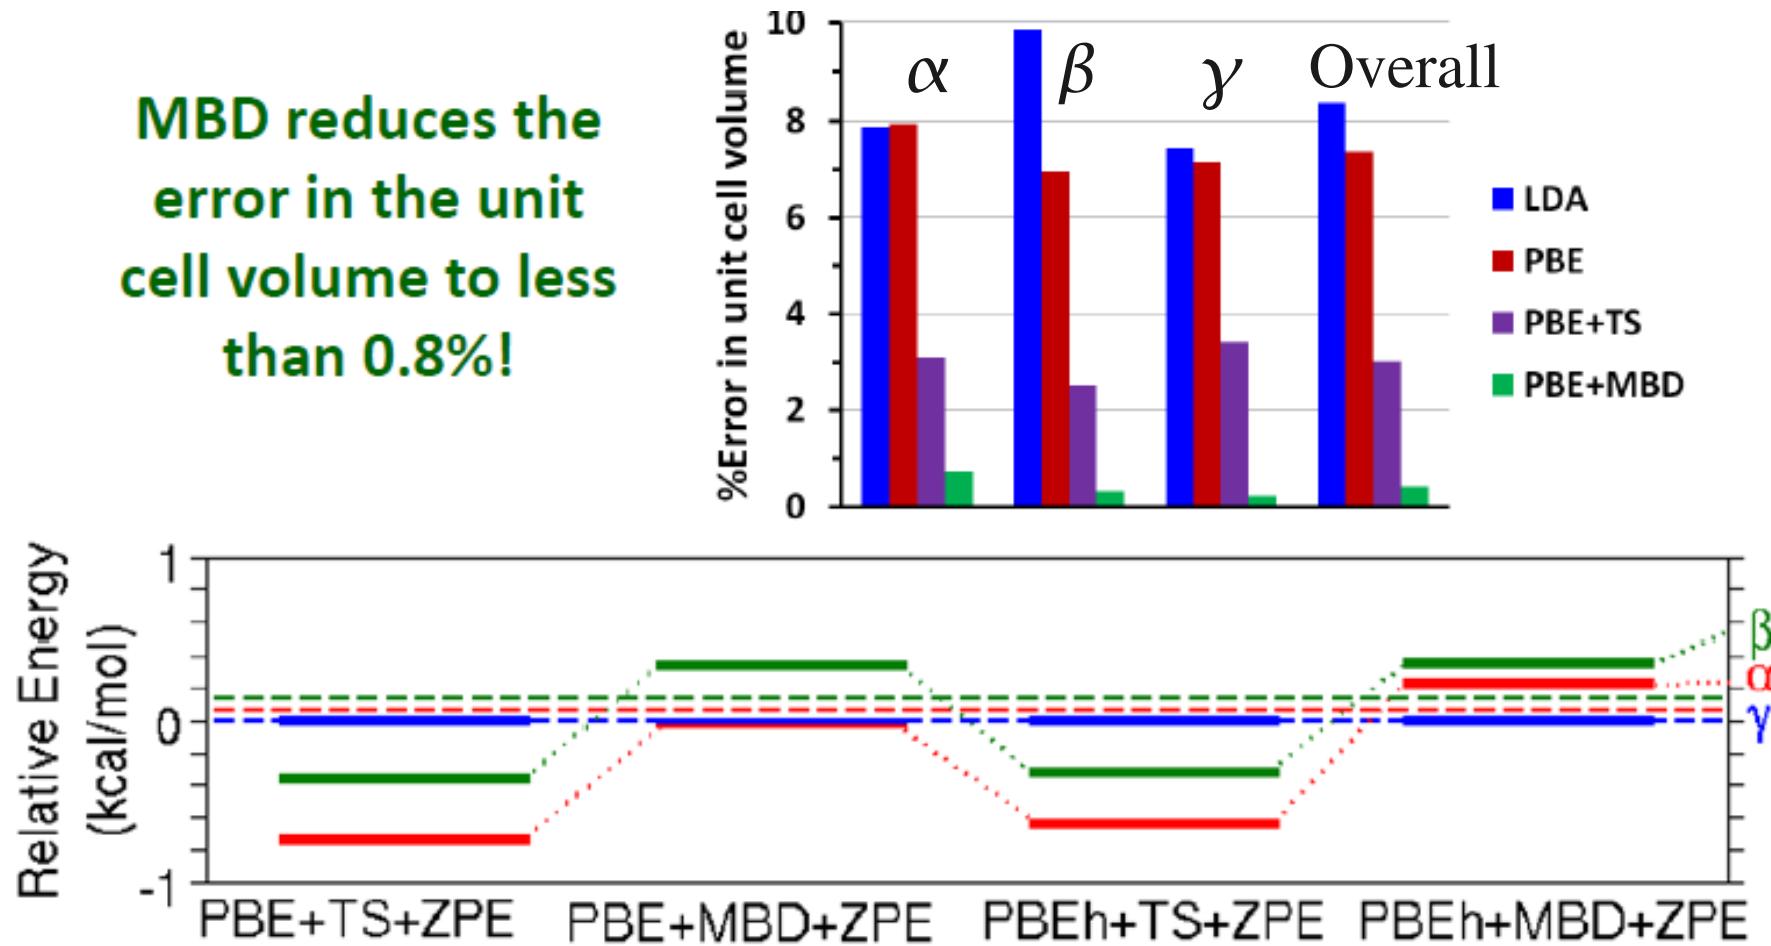

DFT+MBD correctly discriminates between crystal polymorphs: Example of glycine

DFT+MBD correctly discriminates between crystal polymorphs: Example of glycine

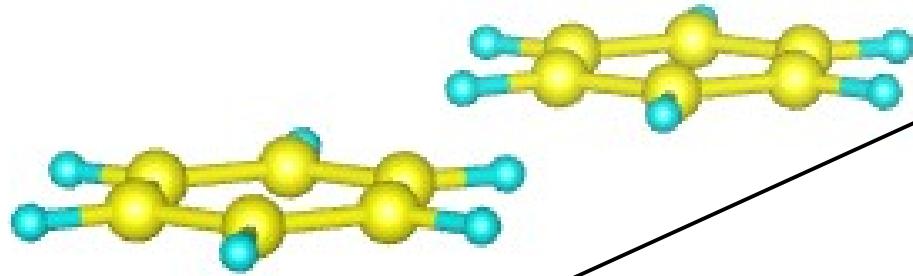

MBD reduces the error in the unit cell volume to less than 0.8%!

DFT+MBD gives relative energies in excellent agreement with experiment, reaching an accuracy better than 0.3 kcal/mol!

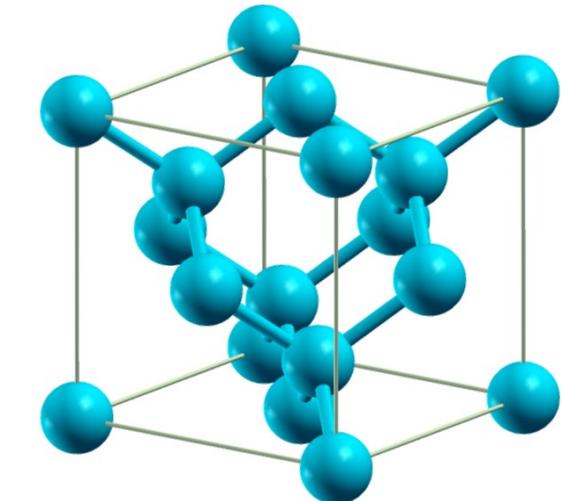

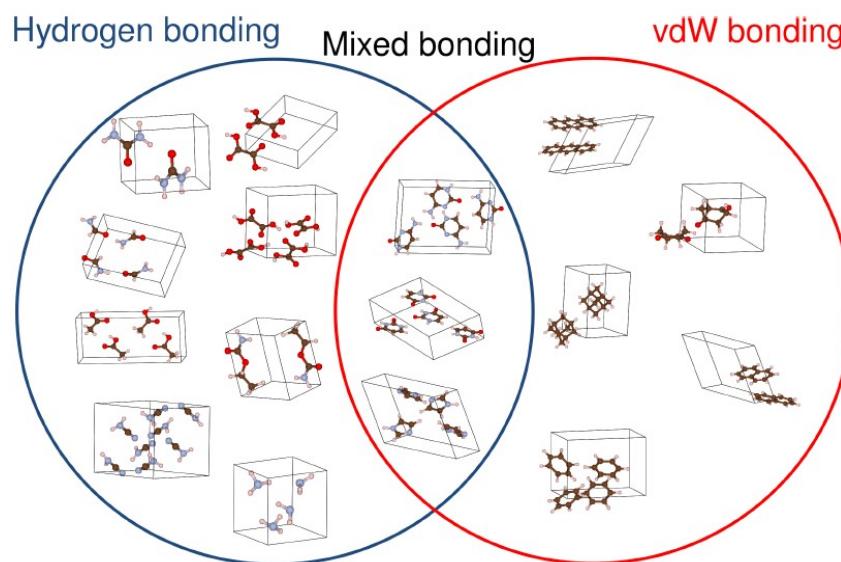

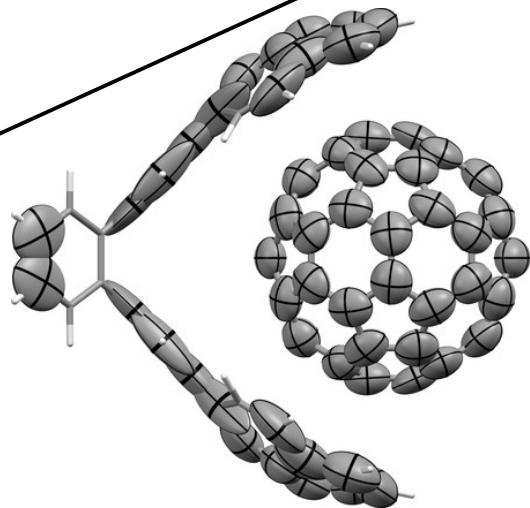

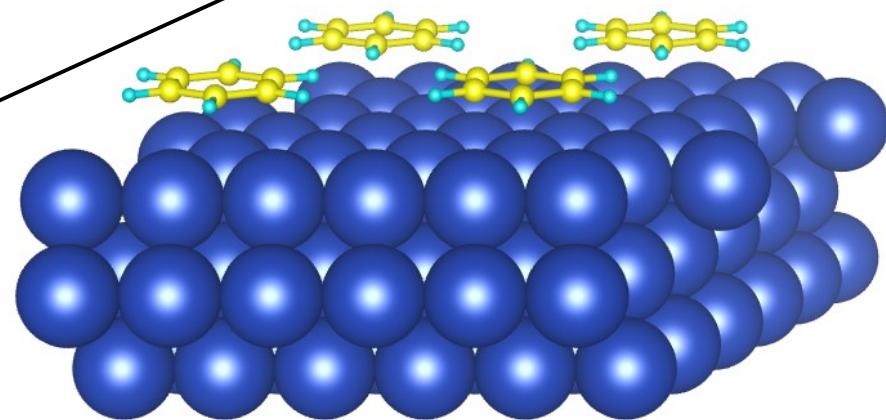

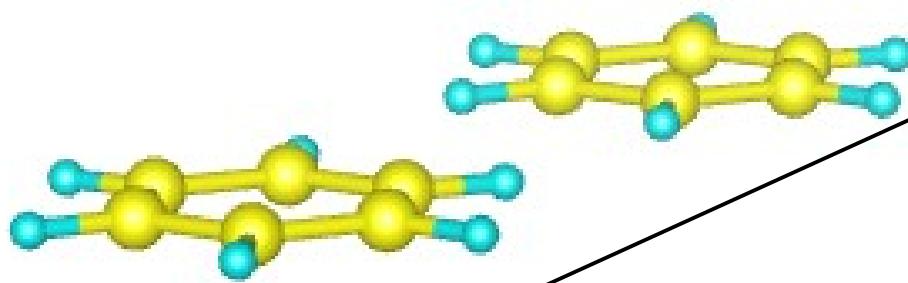

Summary

$$C_{6,\text{eff}}^{ii} = C_{6,\text{eff}}^{ii}[n(\mathbf{r})]$$

Summary

$$C_{6,\text{eff}}^{ii} = C_{6,\text{eff}}^{ii}[n(\mathbf{r})]$$

$$E_c = - \int_0^\infty \frac{d\omega}{2\pi} \int_0^1 d\lambda \text{Tr} \left((\chi_\lambda(\mathbf{r}_1, \mathbf{r}_2; i\omega) - \chi_0(\mathbf{r}_1, \mathbf{r}_2; i\omega)) \frac{1}{|\mathbf{r}_1 - \mathbf{r}_2|} \right)$$

Summary

$$C_{6,\text{eff}}^{ii} = C_{6,\text{eff}}^{ii}[n(\mathbf{r})]$$

First step towards general treatment of vdW interactions in molecules and condensed matter.

Many possible extensions:

Delocalized excitations

Relativistic effects (retardation)

Finite temperature

Higher multipole effects

Systematic scaling to larger systems

...

$$E_c = - \int_0^\infty \frac{d\omega}{2\pi} \int_0^1 d\lambda \text{Tr} \left((\chi_\lambda(\mathbf{r}_1, \mathbf{r}_2; i\omega) - \chi_0(\mathbf{r}_1, \mathbf{r}_2; i\omega)) \frac{1}{|\mathbf{r}_1 - \mathbf{r}_2|} \right)$$
