ICTP-IAEA Joint Workshop on Nuclear Data for Science and Technology: Medical Applications

30 September - 4 October, 2013

The radionuclides and their particles: their origin, character, and fate

F. Roesch

Institute of Nuclear Chemistry
University of Mainz
Germany

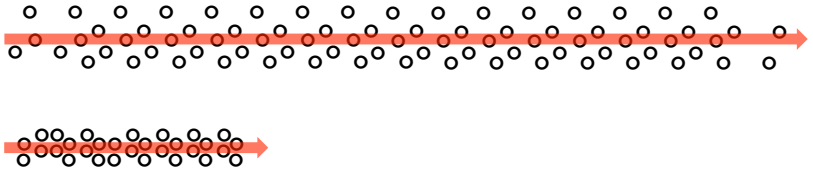
Strada Costiera, 11 - 34151 - Trieste - Italy • Tel. +39 0402240111 • Fax. +39 040224163 • sci_info@ictp.it • www.ictp.it
ICTP is governed by UNESCO, IAEA, and Italy, and it is a UNESCO Category 1 Institute

The radionuclides and their particles: their origin, character, and fate

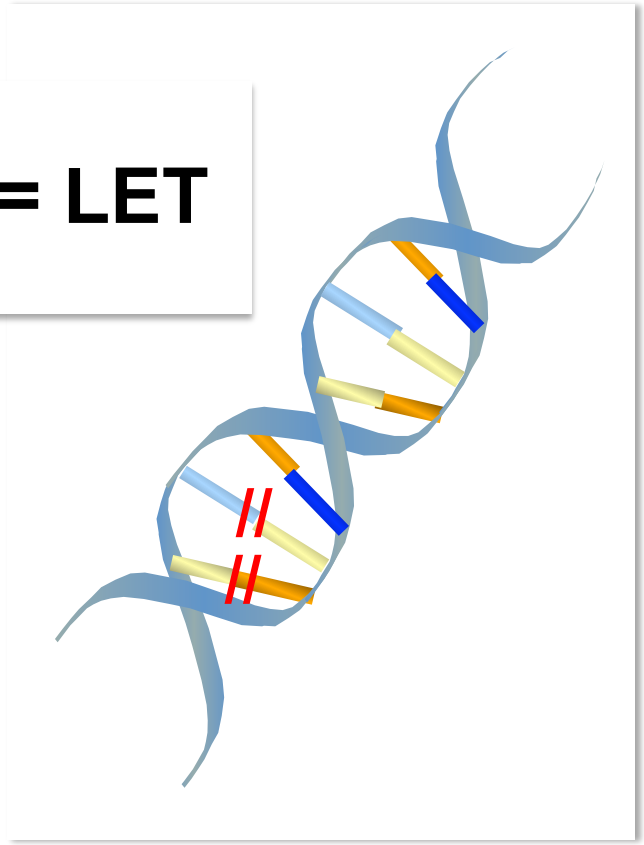
Their fate:

1. PARTICLE INTERACTION WITH MATTER (WATER)

2. IONIZATING WATER MOLECULES,
   THERBY CREATING REACTIVE RADICALS:
   H_2O ->->->-> OH°, H°, etc.



$$\frac{\text{energy}}{\text{distance}} = \textbf{LET}$$

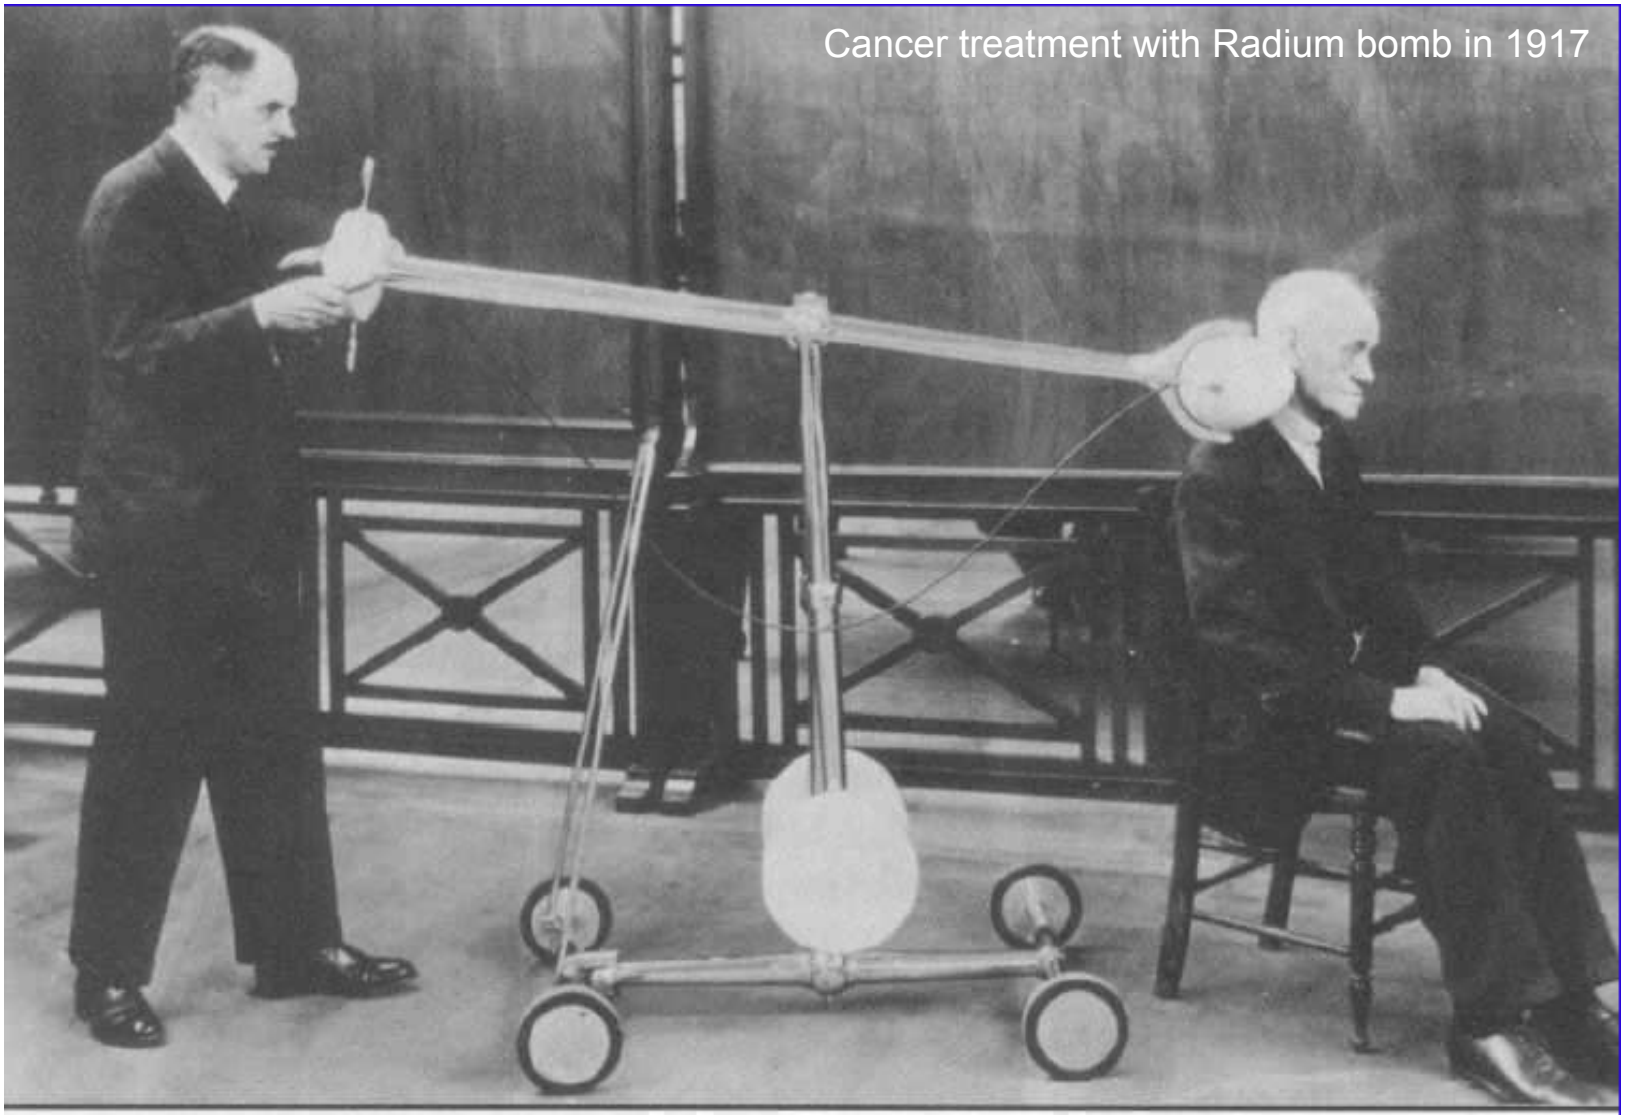


3. DNA DOUBLE-BOND BREAKS

4. RADIATION DOSE PER VOLUME IN GY

5. RADIATION DOSE ≈ THERAPY RESPONSE“

therapeutic radiation dose: EXTERNAL IRRADIATION



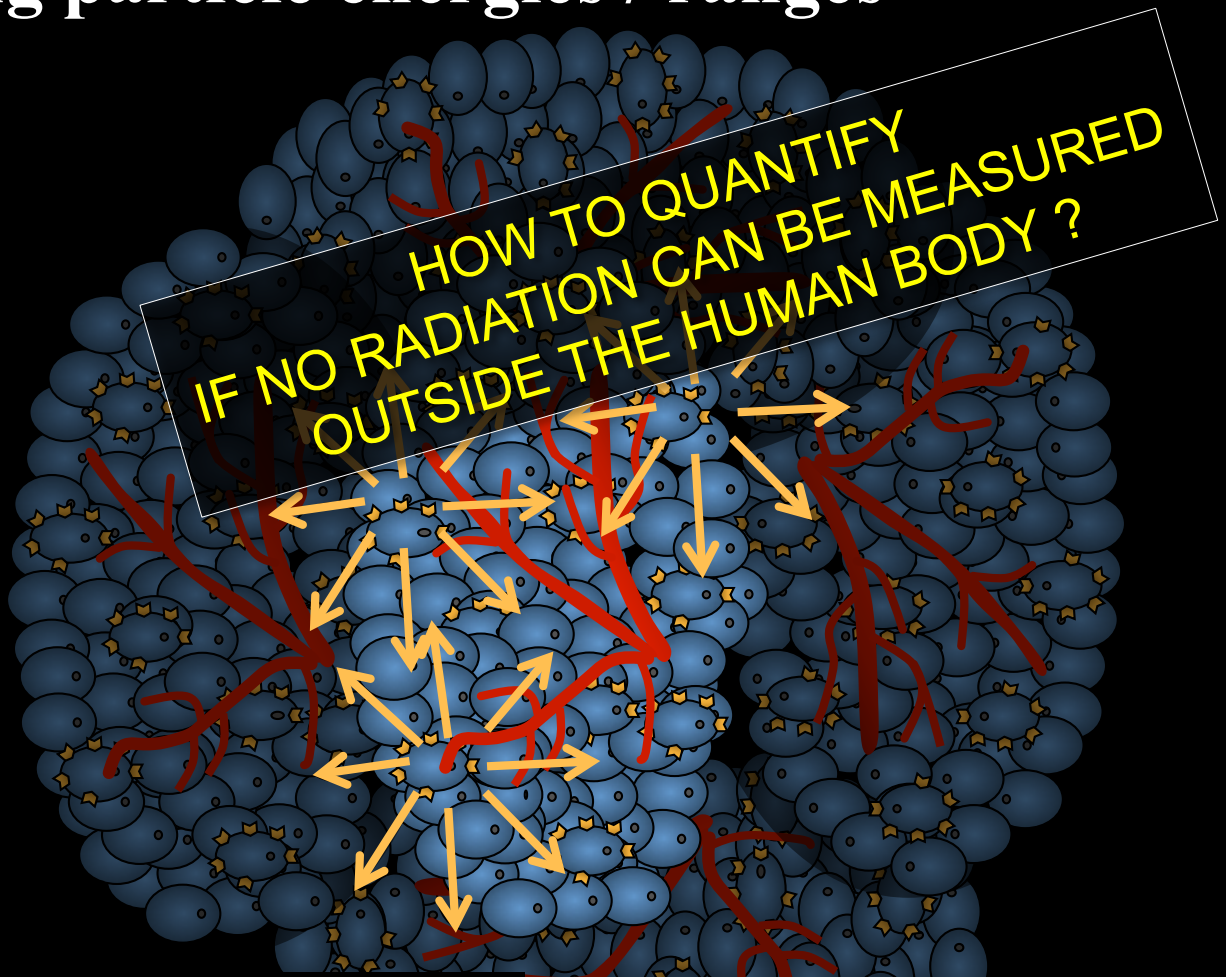
therapeutic radiation dose: INTERNAL IRRADIATION

	factors	influenced by
1	how long is	radiopharmacology $^{BIOL}t_{1/2}$
2	the target organ (tumour)	source (s) and target (t) organ
3	exposed to what absolute radioactivity A	
4	of a certain radionuclide	
5	of physical-half-life $^{PHYS}t_{1/2}$	
6	of radiation characteristics	MIRD S-factors

time integral of the activity

HOW TO QUANTIFY IN VIVO ?

Radionuclides of different kinds of particle emission and varying particle energies / ranges



3.

… delivery of therapeutic doses of ionizing radiation to the malignant cells

but not to surrounding healthy cells

quantification of radiation doses *in vivo*

HOW TO QUANTIFY
IF NO RADIATION CAN BE MEASURED
OUTSIDE THE HUMAN BODY ?

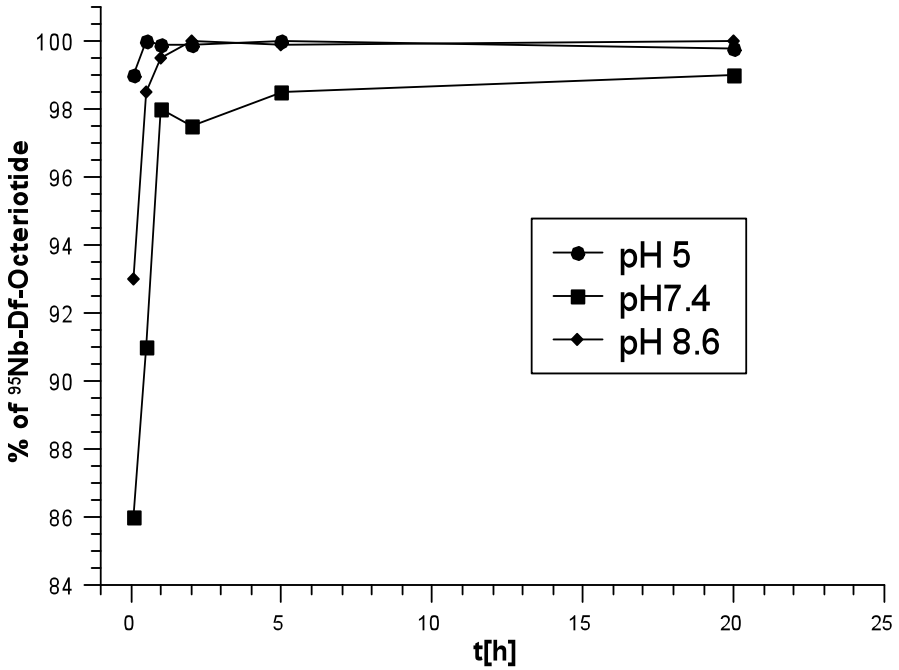
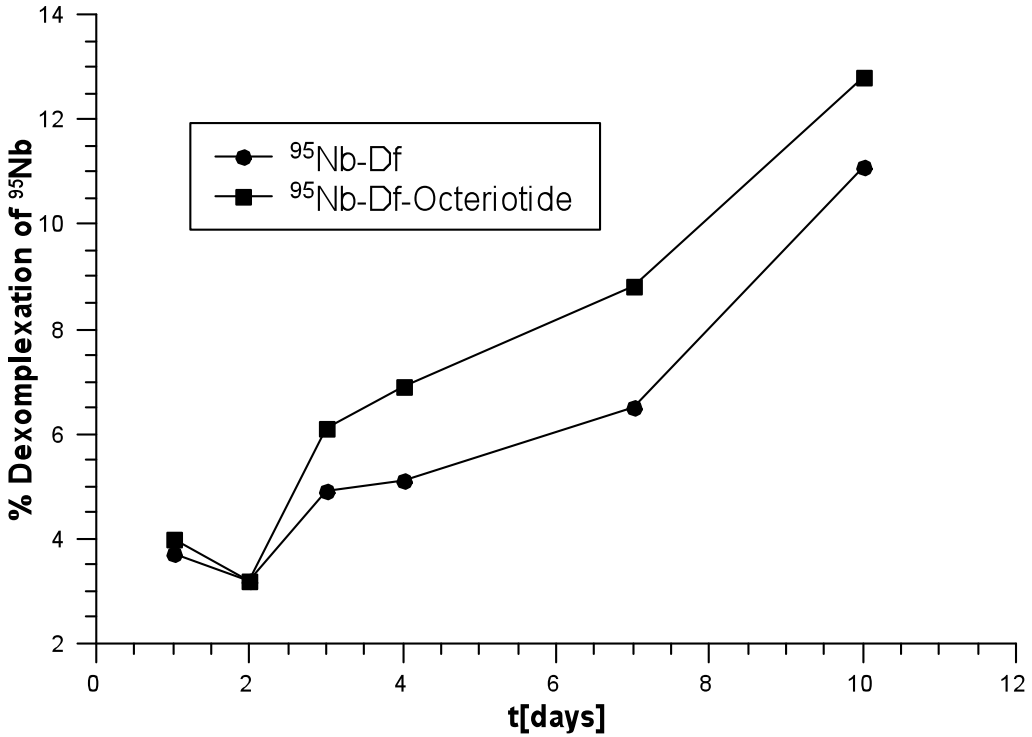
Nb(V) / Zr(IV)-Df-peptides

Proof-of-principle chemistry: Df-(D)Phe^{1}-Octreotide

^{90}Nb
β^+ 0.35
51.0%
14.6 h



^{95}Nb-Df-Octreotide complex formation at different pH values



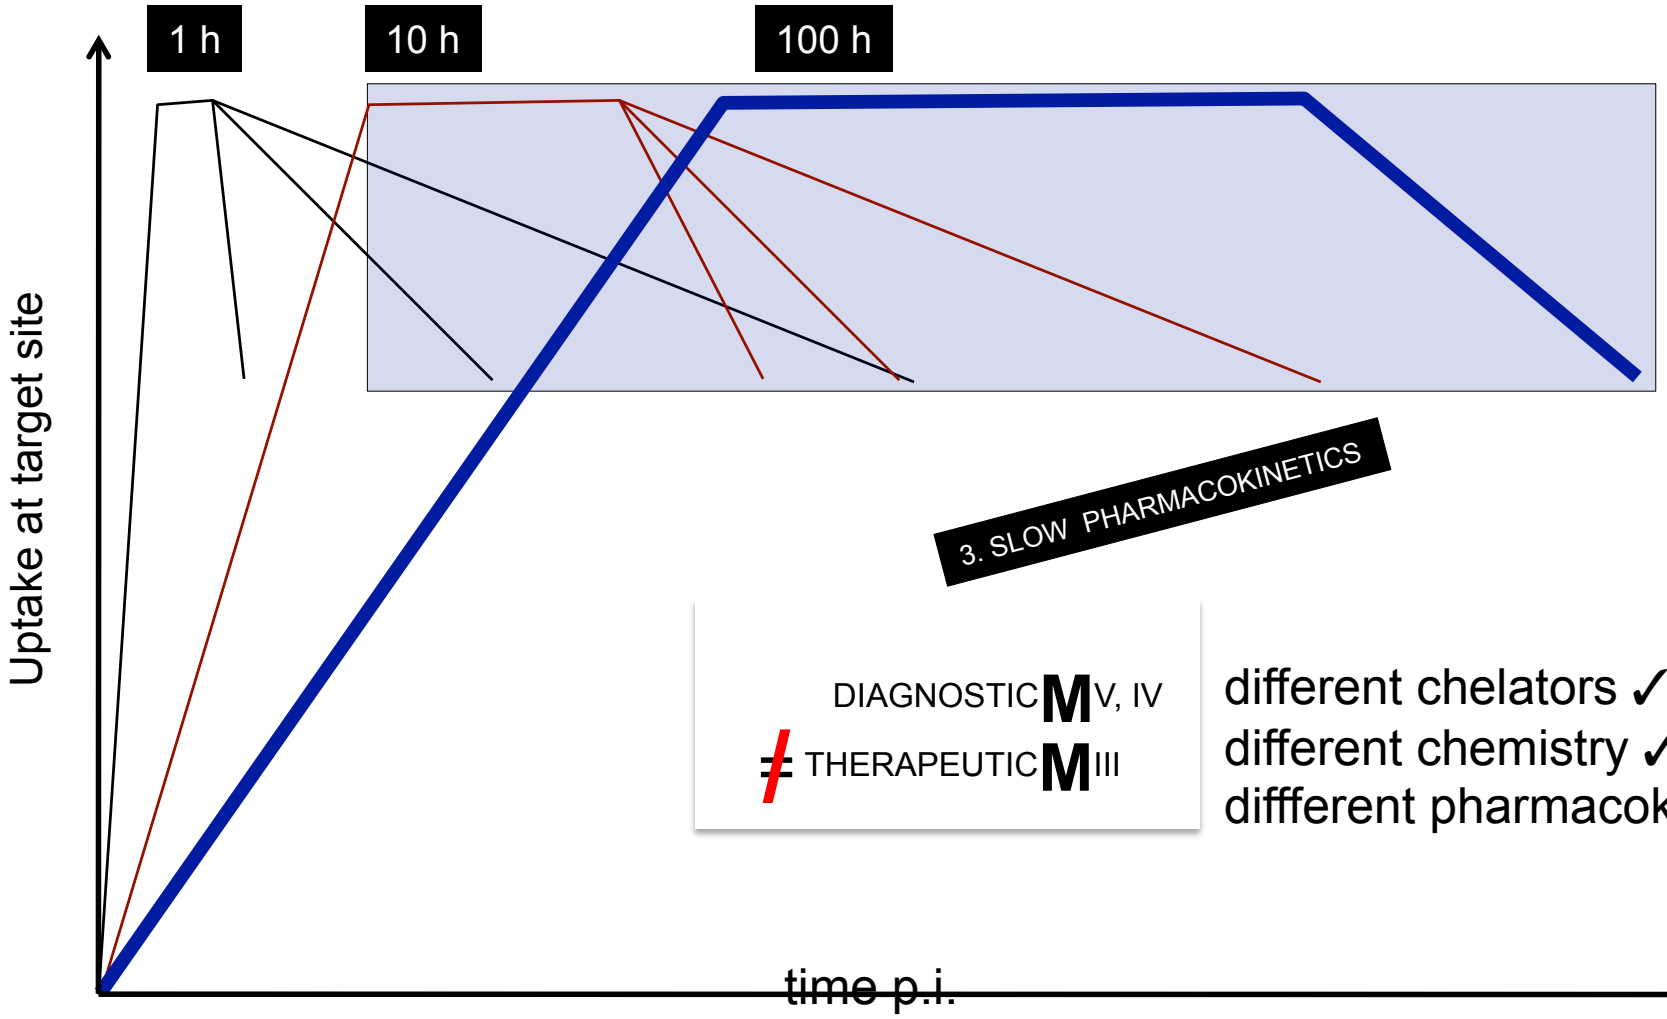
Serum stability of ^{95}Nb-Df and ^{95}Nb-Df-Octreotide

Busse S. PhD Thesis, 2000, University of Mainz

(pre-therapeutic) determination of radiation doses

^{90}Y	^{177}Lu	^{225}Ac
β^- 2.3 …	β^- 0.6 …	α 5.83 …
.	.	.
64.1 h	6.71 d	10.0 d

^{89}Zr
β^+ 0.09
23.0%
3.268 d

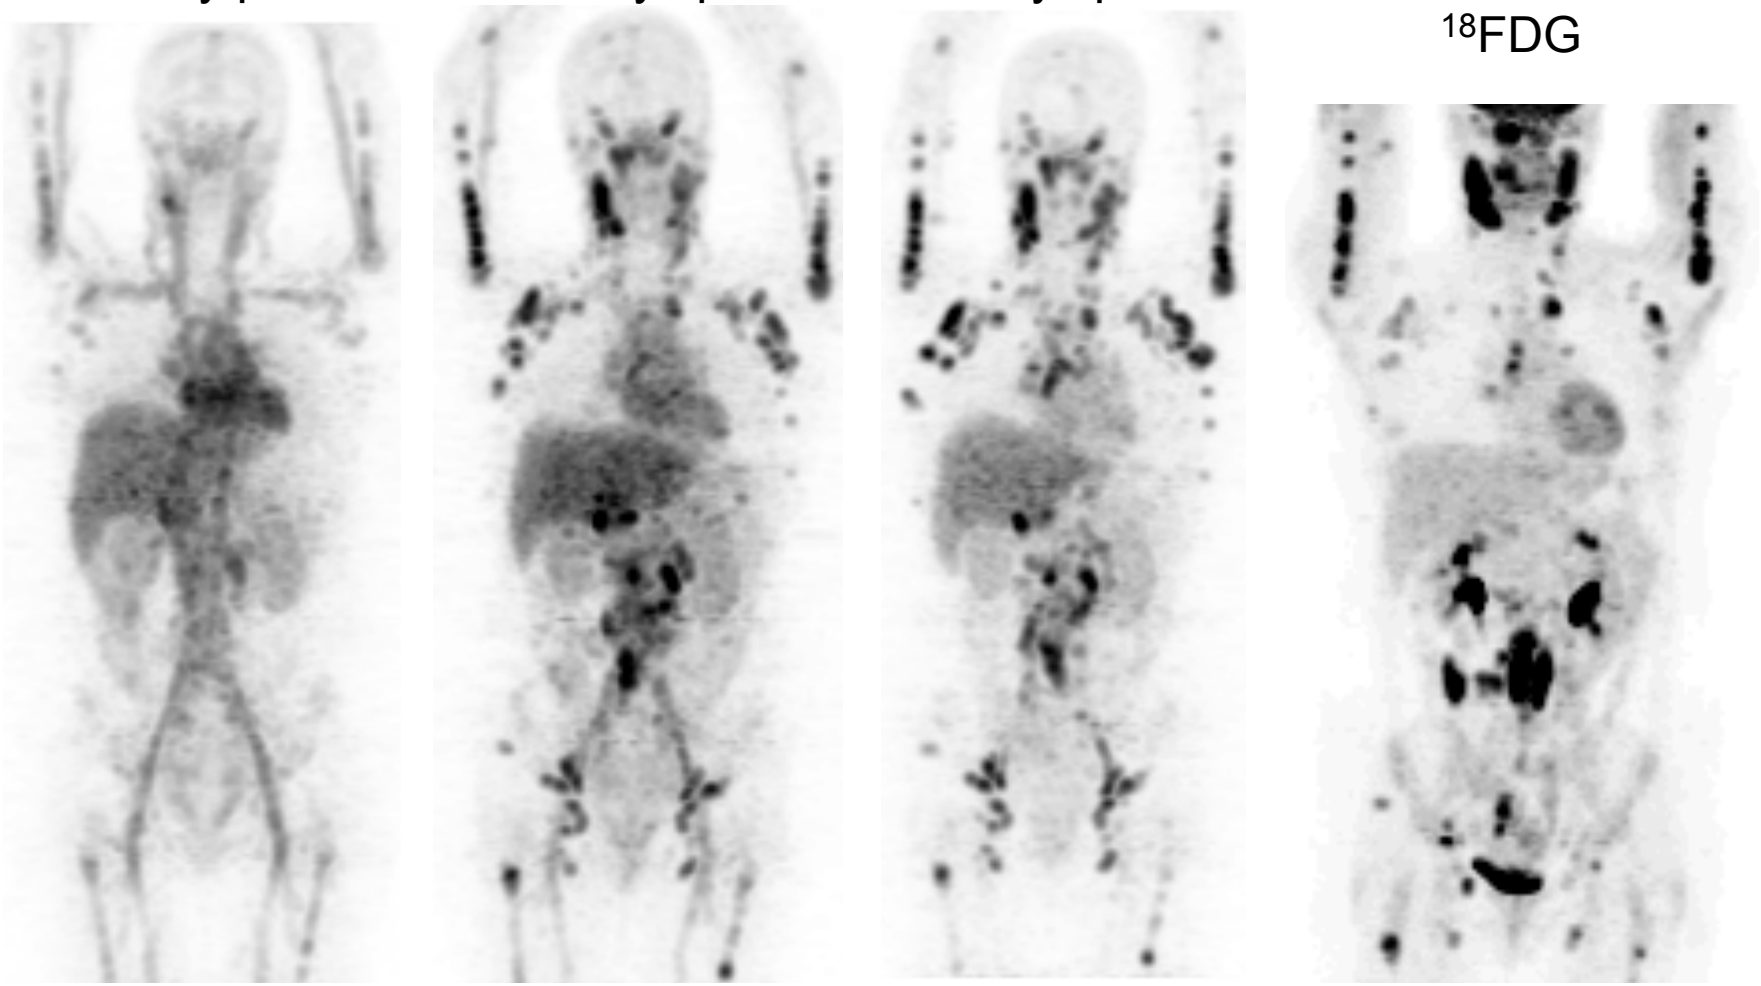


Immuno-PET:
Application of ^{89}Zr-labeled monoclonal antibodies

Confirmation lymphoma targeting with ^{89}Zr-N-suc-Df-rituximab

^{89}Zr
β^+ 0.09
23.0%
3.268 d

1 day p.i. | 3 days p.i. | 6 days p.i. | ^{18}FDG



Collaboration: Kristoff Muylle, Patrick Flamen, Brussels

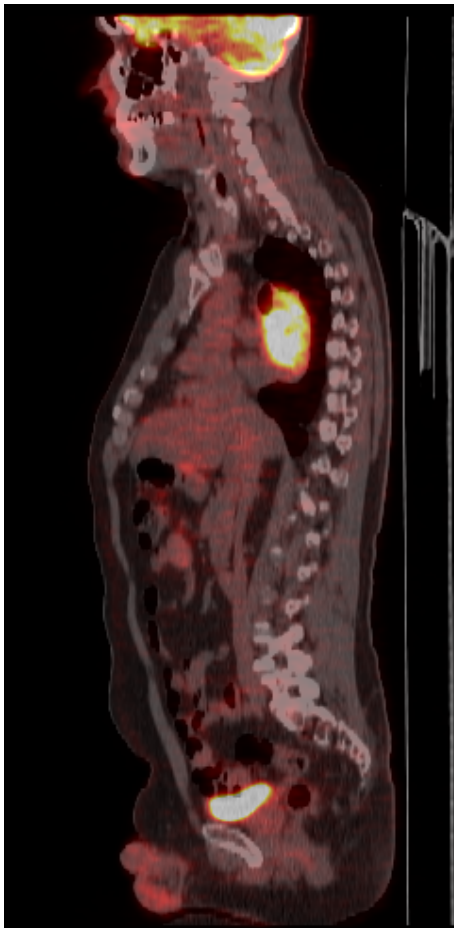
Danielle Vugts
Otolaryngology/Head and Neck Surgery,
Nuclear Medicine & PET research, VU University Medical Center, Amsterdam

Immuno-PET:
Application of ^{89}Zr-labeled monoclonal antibodies

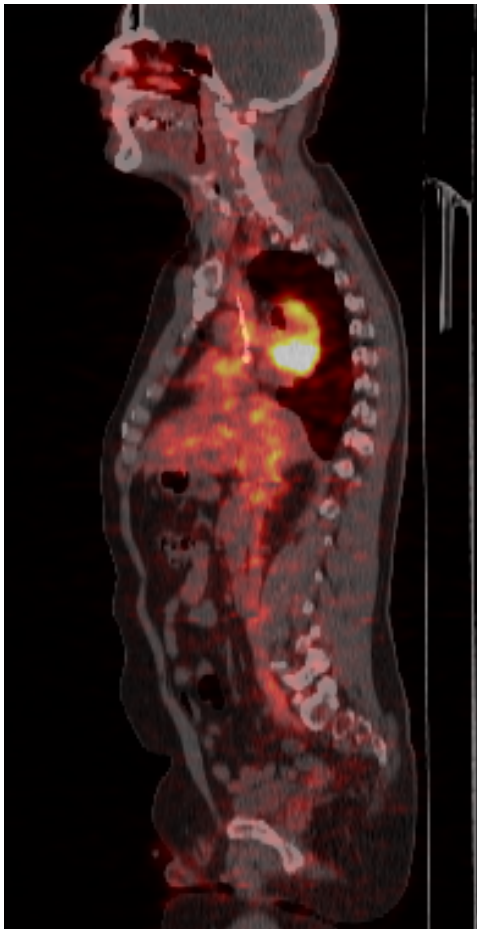
From 'one size fits all' to 'personalized therapy'

^{89}Zr
β^+ 0.09
23.0%
3.268 d

^{18}FDG PET-CT
before



^{89}Zr-rituximab
before



^{90}Y-rituximab
treatment

^{18}FDG PET-CT
3 months after

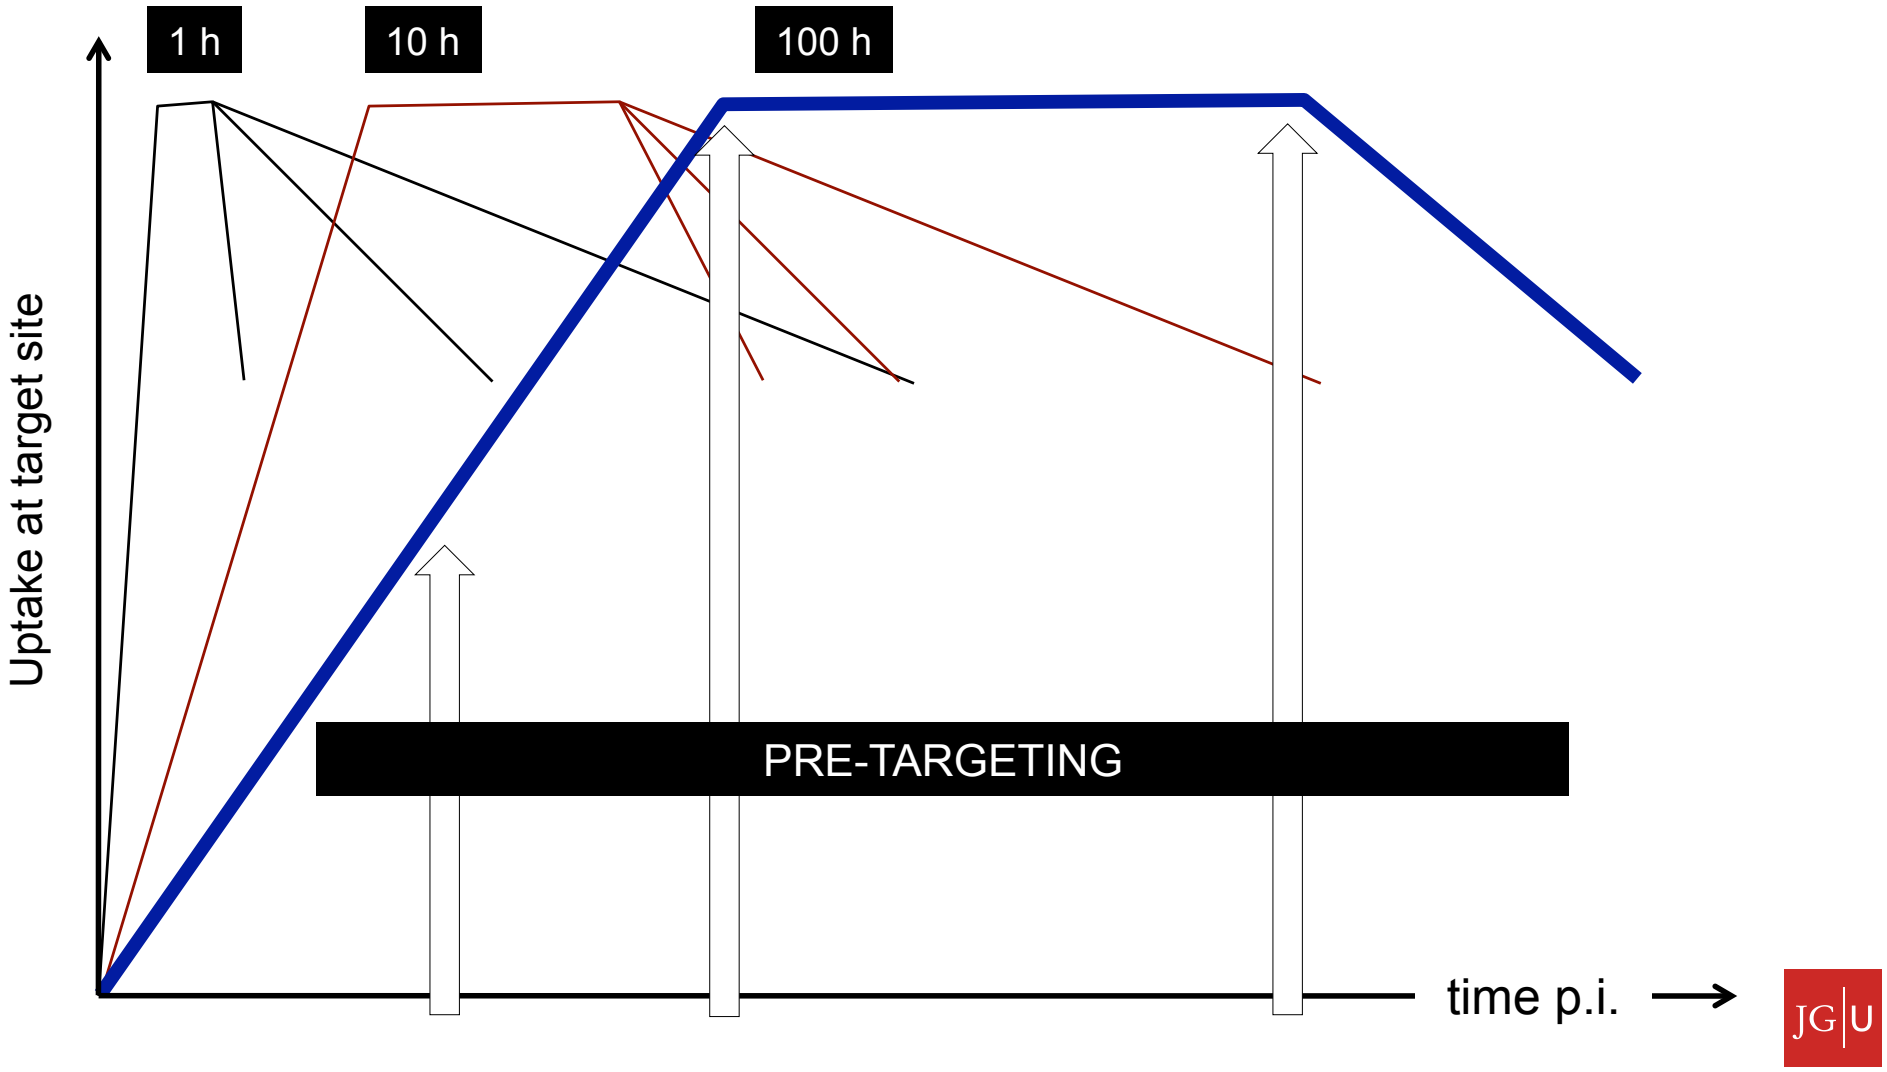
Collaboration: Kristoff Muylle, Patrick Flamen, Brussels

(pre-therapeutic) determination of radiation doses

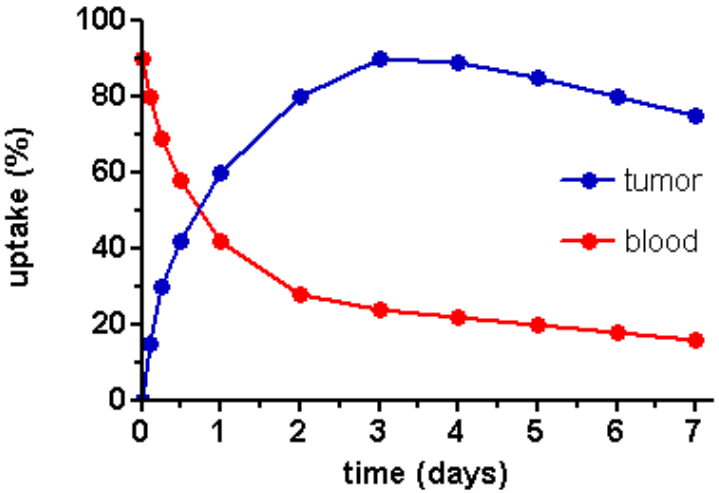
^{90}Y	^{177}Lu	^{225}Ac
β^- 2.3 …	β^- 0.6 …	α 5.83 …
64.1 h	6.71 d	10.0 d

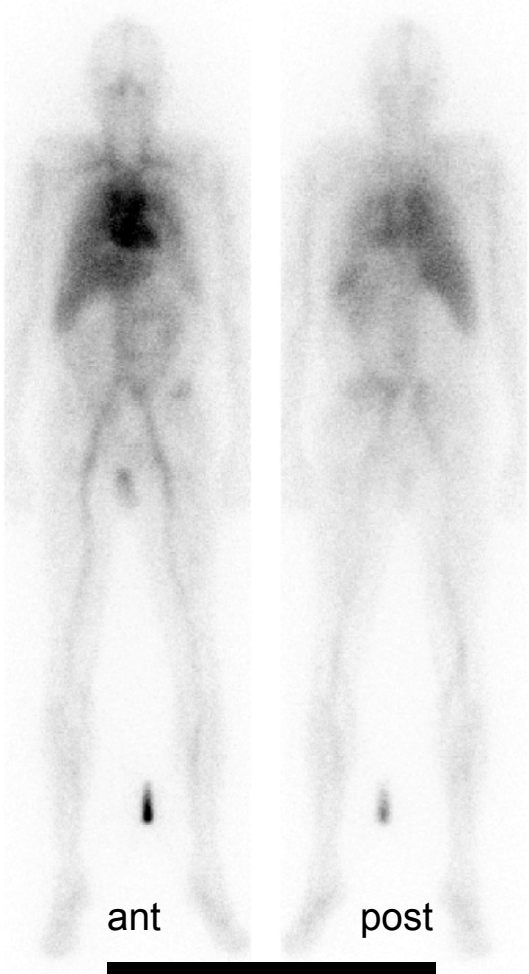


PRE-TARGETING

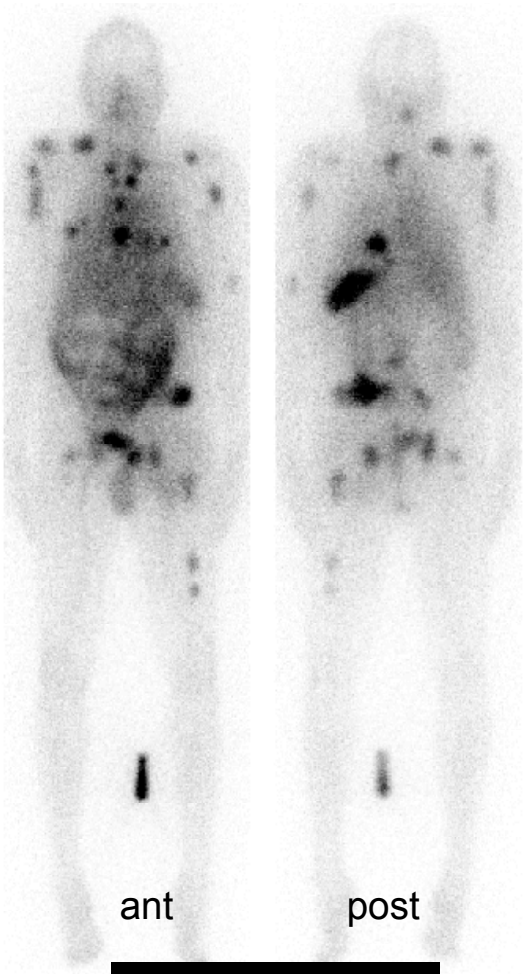
Radioimmunotargeting
with ^{131}I-cG250

Kinetics of antibody targeting





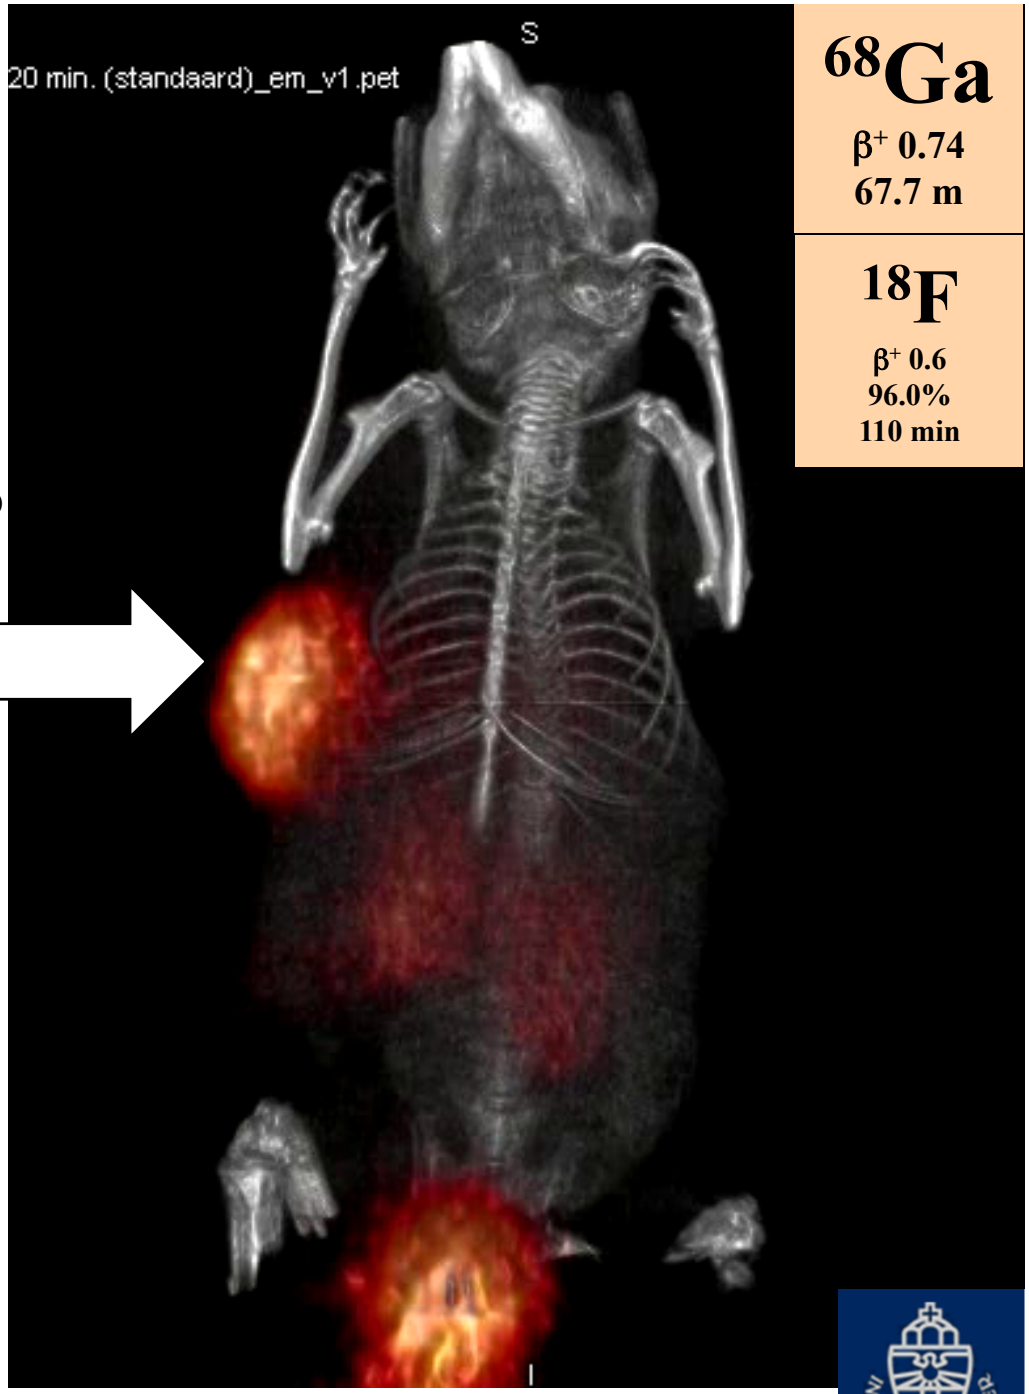
1 h p.i.



72 h p.i.

O C Boerman, R Schoffelen, G Franssen, W McBride, R M Sharkey, D M Goldenberg, W J Oyen
Radboud University Nijmegen Medical Center, The Netherlands / Immunomedics, Morris Plains, NJ / Garden State Cancer Center, Belleville, NJ

Pre-targeted ImmunoPET imaging of CEA-expressing tumors using a ^{68}Ga-labeled peptide



t = 0: trivalent bsAb, anti-CEA x anti-HSG bsAb

t = 16 h: ^{68}Ga-IMP-288

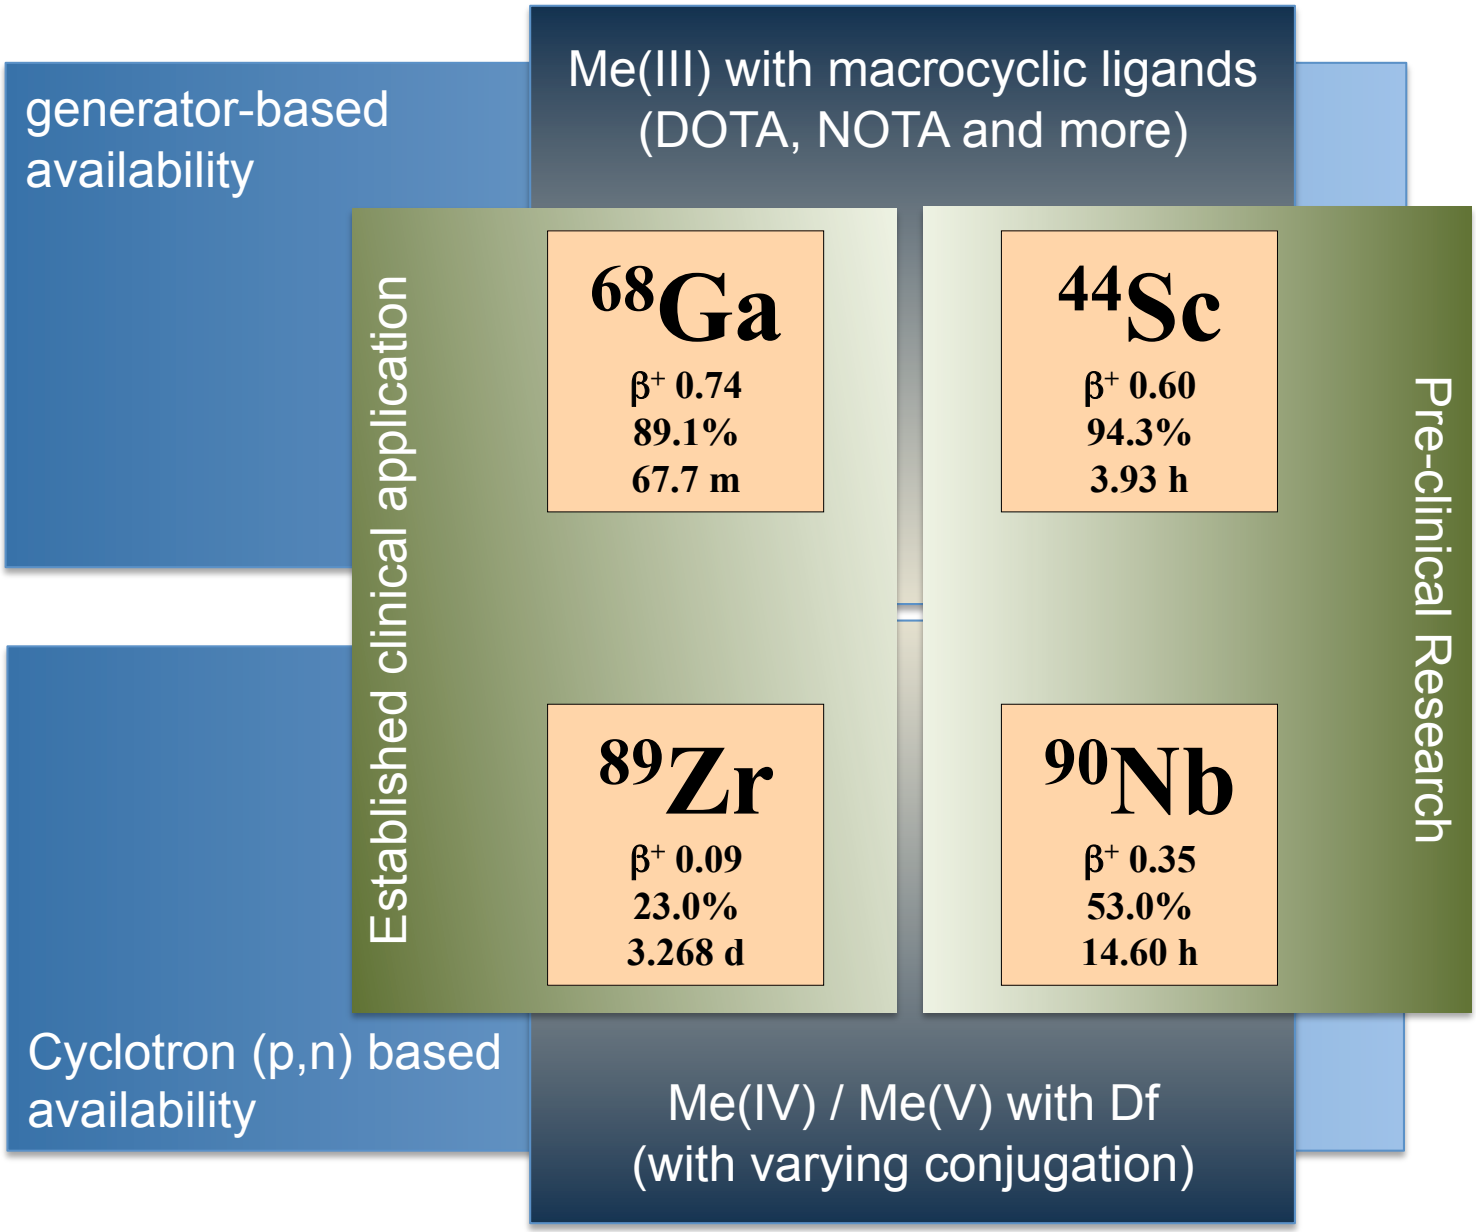
Conclusion

big brothers – little sisters

Short-lived generator-derived ^{68}Ga and ^{44}Sc and longer-lived cyclotron-produced ^{90}Nb and ^{89}Zr positron emitters:

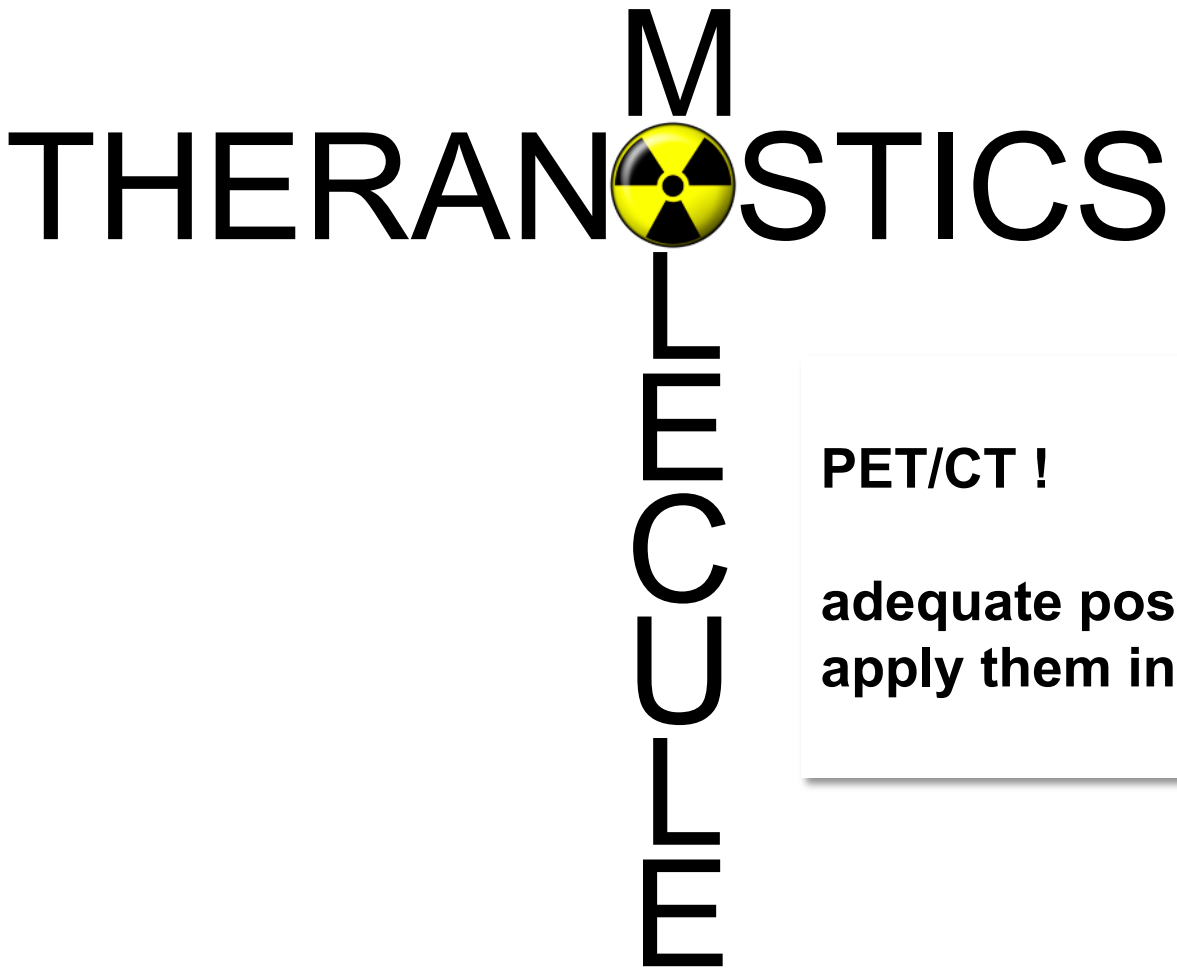
Availability, labelling and directions of applications



1. **PET/CT**

2. **For therapy**
Decicion-making
Dosimetry
Control

Summary:
(pre-therapeutic) determination of radiation doses



PET/CT !

adequate positron emitters available
apply them in clinical (routine)
