Nuclear Sciences and Applications

Departments/Divisions

IAEA Departments

Nuclear Applications

The Department of Nuclear Sciences and Applications helps countries use nuclear and isotopic techniques to promote sustainable development objectives in agriculture, human health, water resource management, marine environment and industrial applications. [Read more →](#)

Nuclear Energy

The Department of Nuclear Energy fosters the efficient and safe use of nuclear power by supporting nuclear programmes around the world, catalyzing innovation and building capability in energy planning, analysis, and nuclear information and knowledge. [Read more →](#)

Safety & Security

The Department of Nuclear Safety and Security works to provide a strong, sustainable and visible global nuclear safety and security framework, protecting people and the environment from the harmful effects of ionizing radiation. [Read more →](#)

Safeguards

The Department of Safeguards carries out the duties and responsibilities of the IAEA as the world's nuclear inspectorate, performing an indispensable role in global efforts to stop the spread of nuclear weapons. [Read more →](#)

Technical Cooperation

The Department of Technical Cooperation helps countries to improve their scientific and technological capabilities in the peaceful applications of nuclear technology, thus contributing to sustainable development. [Read more →](#)

Division of Physical and Chemical Sciences

Nuclear technologies contribute in many ways to the health, prosperity and security of both the developed and developing countries. The effective development of new nuclear technologies and the safe and economical maintenance of existing technologies both rely on a thorough understanding of the underlying physical and chemical processes.

The Division of Physical and Chemical Sciences (NAPC), located within the IAEA Department of Nuclear Sciences and Applications (NA), is responsible for carrying out Agency activities to assist and advise Member States (MS) in assessing their needs for capacity building and research and development in the nuclear sciences, as well as in supporting the MS activities for deriving benefits in specific fields, including:

- Atomic, molecular and nuclear data
- Nuclear and radiation techniques, their applications and allied instrumentation
- Utilization of research reactors and particle accelerators
- Radioisotopes and radiopharmaceuticals
- Radiation processing applications
- Radiation technology and isotopic tracers for industrial processes
- Isotope hydrology and water resources management
- Nuclear fusion

Nuclear Data Section

- responsible for the development and dissemination of atomic and nuclear data for applications

Scientists in developing countries are assisted in their evolution of local capabilities for the generation and application of atomic and nuclear data through an active programme of technology transfer activities which include

- Data compilation and evaluation*
- Data services, Data Networks and User Support (documents, CDs)*
- Nuclear Data Standards and Evaluation Methods*

Nuclear Data

- **energy-dependent reaction probabilities (cross sections)**
- **energy and angular distributions of reaction products for many combinations of target and projectile**
- **atomic and nuclear properties of excited states**
- **nuclear structure and radioactive decay data**

NEUTRON CROSS-SECTION STANDARDS, 2006

An IAEA Nuclear Data Section Initiative

Neutron cross-section standards are important in the measurement and evaluation of all other neutron reaction cross-sections. Not many cross-sections can be defined as absolute - most cross-sections are measured relative to the cross-section standards for normalization to absolute values. Previous evaluations of the neutron cross-section standards were completed in 1987 and disseminated as both NEANDC/INDC ([NEANDC-311](#)) and ENDF/B standards. R-matrix model fits for the light elements and non-model least-squares fits for the heavy elements were the basis of the combined fits for all of the data. Some important reactions and constants are not standards, but assist greatly in the determination of the standard cross-sections and reduce their uncertainties - these data were also included in the combined fits.

The need to re-evaluate the cross-section standards at the beginning of the 21st century is based on the appearance of a significant amount of precise experimental data and developments in the methodology of analysis and evaluation. An IAEA Consultants' Meeting was held in 2001 to consider the major tasks to be undertaken in order to improve the 1987 standards evaluation ([Summary Report](#) of the Consultants' Meeting on Improvement of the Standard Cross Sections for Light Elements, Vienna, 2-4 April 2001, INDC (NDS)- 425, prepared by A.D. Carlson, D.W. Muir and V.G. Pronyaev, June 2001). Thus, an IAEA Co-ordinated Research Project (CRP) entitled "[Improvement of Standards Cross-Sections for Light Elements](#)" was formulated, and this work was substantially extended through the course of these multinational studies by the inclusion of tasks to evaluate the cross-section standards for heavy elements.

The evaluations of the neutron cross-section standards were finalized in October 2005. Previous difficulties experienced with a data evaluation problem known as "Peelle's Pertinent Puzzle" create biases in the fit of correlated data, and were addressed to reduce this phenomenon. The new evaluations of the cross-section standards also include covariance matrices of the uncertainties that contain fully justifiable values. Significant contributions to the experimental database were made by participants of Subgroup 7 of the NEA Working Party on International Nuclear Data Evaluation Co-operation (WPEC). Furthermore, the evaluations could not have been carried out without access to the original GMA database and related

ICTP/IAEA Workshop on Nuclear Data for Analytical Applications

International Atomic Energy Agency

Coordinated Research Projects

- An important IAEA mechanism for organizing international research work to achieve specific research objectives
- Bring together researchers in both developing and developed countries to address a problem of common interest
- Not only further knowledge but improve research capacity in Member States (MS)
- Results are available, free of charge to scientists, and other users from all MS

CRPs cont'd

- CRPs are initiated by IAEA project officers following advice and suggestions of “consultants” who participate in a Consultant’s Meeting
- After approval a call for research contracts and agreement proposals follows
- Once the evaluation and selection of proposals is completed the IAEA PO collaborates with Chief Scientific Investigators from the different research institutes involved in order to assign specific tasks and monitor progress
- Duration is normally 3 to 5 years

Other tools

- Data Development Projects
 - No formal agreements or contracts
 - Small group of experts
 - Regular meetings at IAEA to discuss progress
- Individual Contracts
- Training Workshops

Nuclear Data Services

Nuclear Data Service **IBANDL**

This is the **Ion Beam Analysis Nuclear Data Library** developed and formerly maintained by [A.Gurbich](#) under the IAEA auspices. It contains most of the available experimental nuclear cross-sections relevant to Ion Beam Analysis. Excitation functions are presented both as graphs and data files. The numerical data are in the [R33](#) format. All the entries are supplied with a reference to the data source. The data published only in a graphical form were digitized using a precise technique. Where all efforts were made to ensure that the most accurate information was adopted, no guarantee can be given concerning the full validity of the data, and the IAEA accepts no responsibility for usage of IBANDL.

Due to technical reasons the IBANDL Web-interface was relocated and redesigned by [V.Zerkin](#) to whom relevant problems if any should be reported. Every effort was made in order to preserve IBANDL content, look, and functionality. Members of the IBA community are again invited to supply the new data to the library. Data files should be sent to [V.Semkova](#).

The activity of the IBA community in the field of nuclear data is now supported by IAEA through the Coordinated Research Project (CRP) "Development of a Reference Database for Particle-Induced Gamma Ray Emission (PIGE) Spectroscopy. A [summary](#) of the first CRP meeting describes its plans and goals.

Automatic conversion from EXFOR to R33 is now provided. When nucleus and projectile are selected press "EXFOR" button in the left frame and the information available in the [EXFOR data base](#) will be displayed. Details of the conversion algorithm can be found [elsewhere](#).

A complete [CD version](#) of IBANDL updated in December, 2011 is available on request. This new version can be copied from CD to PC.

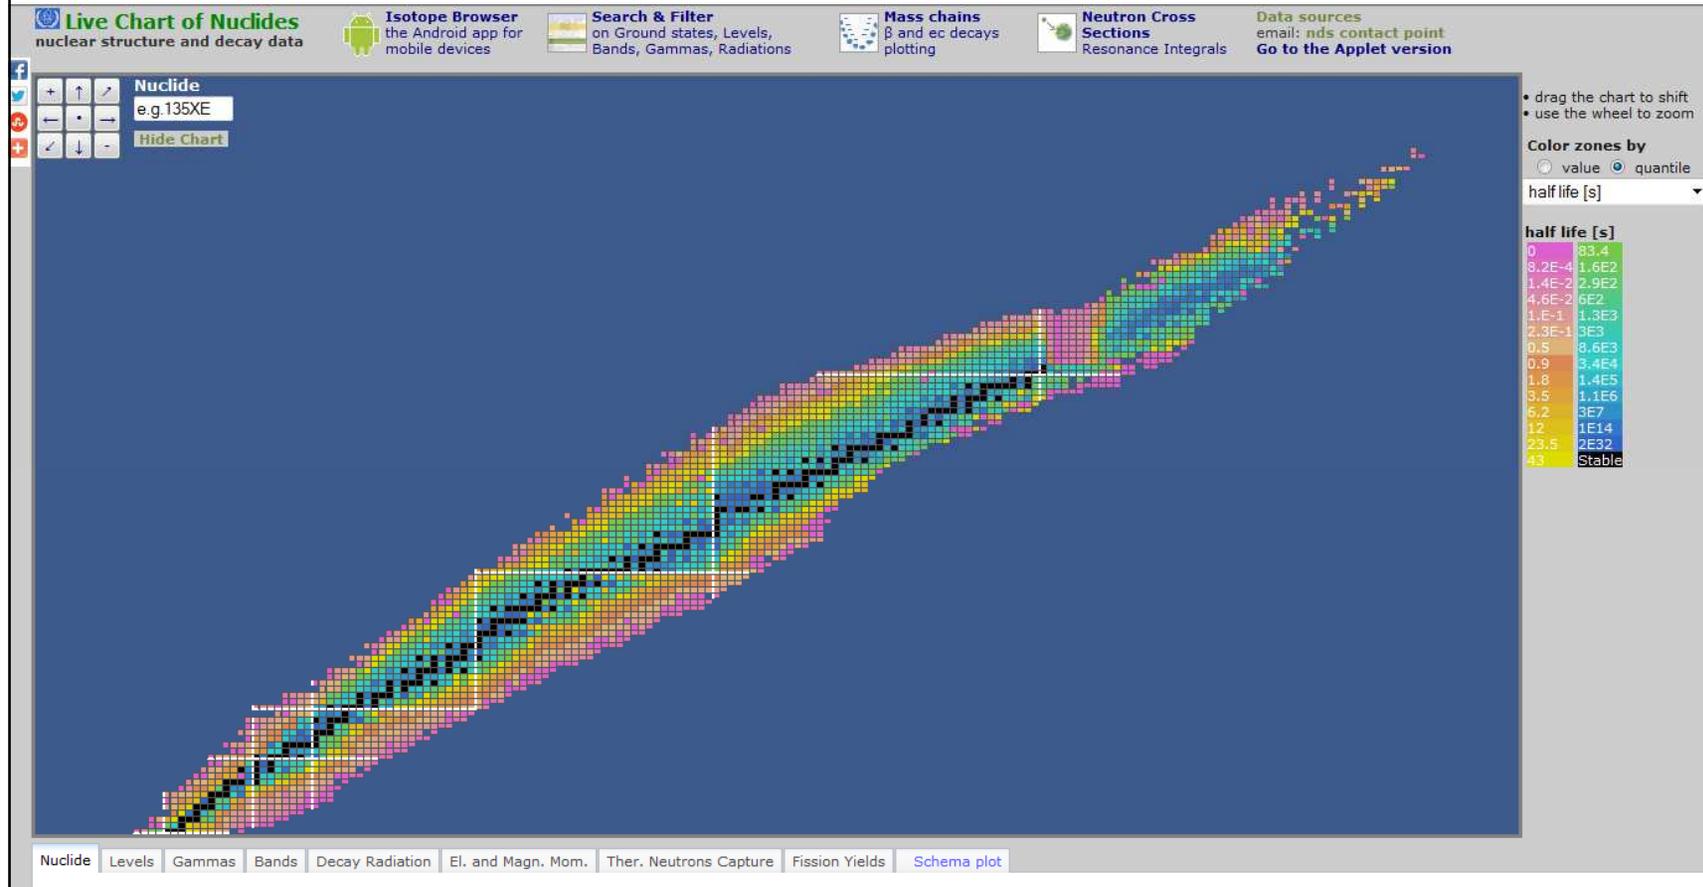

When citing data retrieved from IBANDL both the original article and the database should be referenced.

International Networks

- **Nuclear Structure and Decay Data Network (NSDD)**
- **Nuclear Reaction Data Centres Network (NRDC)**

Nuclear Structure and Decay

- **Nuclear Structure & Decay Data Network (NSDD)**

The International Network of Nuclear Structure and Decay Data (NSDD) is an international team of experts who provide recommended nuclear structure and decay data to be used in basic and applied research.

Data include:

- bibliographic information: Nuclear Science References (**NSR**)
- evaluated numerical data: Evaluated Nuclear Structure Data File (**ENSDF**)

Evaluated nuclear quantities: disintegration energies, radiation and transition probabilities, nuclear level schemes, excitation energies, half-lives, decay modes, spin-parity values, magnetic and electric multipole moments, and nuclear band structure.

NSDD Network

(<http://www-nds.iaea.org/nsdd>)

- **NSDD Biennial Meetings (supported by IAEA)**
- **Biennial IAEA-ICTP Workshops on "Nuclear Structure and Decay Data: Theory and Evaluation"**

organized jointly with the International Centre for Theoretical Physics (ICTP) in Trieste, Italy.

UPCOMING: 24-28 March 2014

Nuclear Reaction Data Centres Network

- **The Network was established to coordinate the world-wide collection, compilation and dissemination of nuclear reaction data**
 - **Compilation of relevant bibliographic information (CINDA),**
 - **Compilation of experimental nuclear reaction data (EXFOR),**
 - **Collection of evaluated nuclear reaction data (ENDF),**
 - **Exchange of nuclear reaction data of all types,**
 - **Promotion of the development of special purpose evaluated data files,**
 - **Development of common formats for computerized exchange of nuclear data,**
 - **Coordinated development of computer software for managing and disseminating nuclear data,**
 - **Coordination of the development and dissemination of end user software for both on line and local access to nuclear data,**
 - **Documentation of current and future data needs in order to be able to meet changing user demands.**

Nuclear Reaction Data Centres Network

- Biennial Technical Meetings
- Regular EXFOR Workshops

International Network of Nuclear Reaction Data Centres (NRDC)
 Coordinator: Naohiko Otsuka (IAEA Nuclear Data Section)
 (To previous NRDC Home / NRDC Internal Archive / Site map)

What is NRDC?
 The International Network of Nuclear Reaction Data Centres (NRDC) constitutes a worldwide cooperation of nuclear data centres under the auspices of the International Atomic Energy Agency. The Network was established to coordinate the world-wide collection, compilation and dissemination of nuclear reaction data.

Objectives and Tasks
 The primary goal of the Network is the dissemination of nuclear reaction data and associated documentation to users. The following specific tasks must be carried out in order to accomplish this important aim:

- Compilation of relevant bibliographic information (CINDA),
- Compilation of experimental nuclear reaction data (EXFOR),
- Collection of evaluated nuclear reaction data (ENDF),
- Exchange of nuclear reaction data of all types,
- Promotion of the development of special purpose evaluated data files,
- Development of common formats for computerized exchange of nuclear data,
- Coordinated development of computer software for managing and disseminating nuclear data,
- Coordination of the development and dissemination of end user software for both on line and local access to nuclear data,
- Documentation of current and future data needs in order to be able to meet changing user demands.

Core Centres | Specialized Centres | Discontinued Centres

Core Nuclear Data Centres provide coordinated, world-wide customer services covering the entire range of nuclear data described herein. These core centres also provide comprehensive compilations of experimental neutron reaction data and related bibliographic information.

Country	Centre	Joined
U.S.A.	US National Nuclear Data Center Brookhaven National Laboratory, Upton, NY	1966
France	OECD NEA Data Bank Issy-les-Moulineaux	1966
Austria	IAEA Nuclear Data Section Vienna	1966
Russia	Russian Nuclear Data Center Institute of Physics and Power Engineering, Obninsk	1966
