# Mobile Crowdsensing Apps

“Mobile crowdsensing applications ...collect and share information about the user or the environment, either interactively or autonomously, towards a common goal.”

Source: IBM

# Current Research

- Social Networks Applications (SNA) changes the way people communicate
- GNSS based SNA applications are used for various daily applications: social navigation, mapping;rideshare parking discovery e-commerce etc.
- the common denominator being a resource limited world and a smart ability to share geotagged information
- Search and rescue efforts recently show increase use in SNA+GNSS.
- **How could SNA be utilized in crisis management to better respond in future crises?**

# Timeline of Major Technology – focus on the last 2 years

## Social Networks

**facebook**  
600M -> 1B Users  
Jan 2012-> Oct 2012)

**OpenStreetMap**  
25K+ active contributors/month  
Q1 2012

**waze** way to go  
40M users  
65K active contributors  
Q4 2012

**waze** way to go  
Google M&A  
Waze for 1.2B\$

**facebook**  
Safety check announced

## Internet

**foursquare**  
20M users  
200M Tweets/day  
2B check ins Q1 2012  
30M users Q4 2012

20% of internet surfing  
Sourced from mobile

27% of Companies implement LBM

**Twitter** 230 M users  
143,199 TPS ( Ave. 5700)  
1%-3% Geo-tagged

## GNSS

**GLONASS**  
accuracy < 2.8m  
2012

**Baidu IOC over AP**  
Dec 2012

**MEDIATEK**  
5 in 1 GNSS chip  
2013

**QLQM SNPDRGN 615**  
GPS GLNSS Baidu  
February, 2014 (Q3)

**HTC 820**

## Mobile & Smartphone

**Dual GNSS iPhone 4S**

**4G LTE**

**Octa Core Galaxi S4**

**ZTE Blade 3.5 w/ A-GPS for \$140**

**iPhone 5S M7 Android – fused location/actvtrec**

**Apple M7**

**1.75M Smartphone users by H1**

**User based mesh networks IOC**

# Case Study -1

# Communication infrastructure

As of Mar. 12

4,900 base station equipments disrupted in Tohoku

**Principal reasons for service disruption**

Direct damage from earthquake/tsunami (physical damage/submersion, etc.)

Transmission line disruption due to earthquake (optical fiber, etc.)

Battery run-out due to long hours of power outage

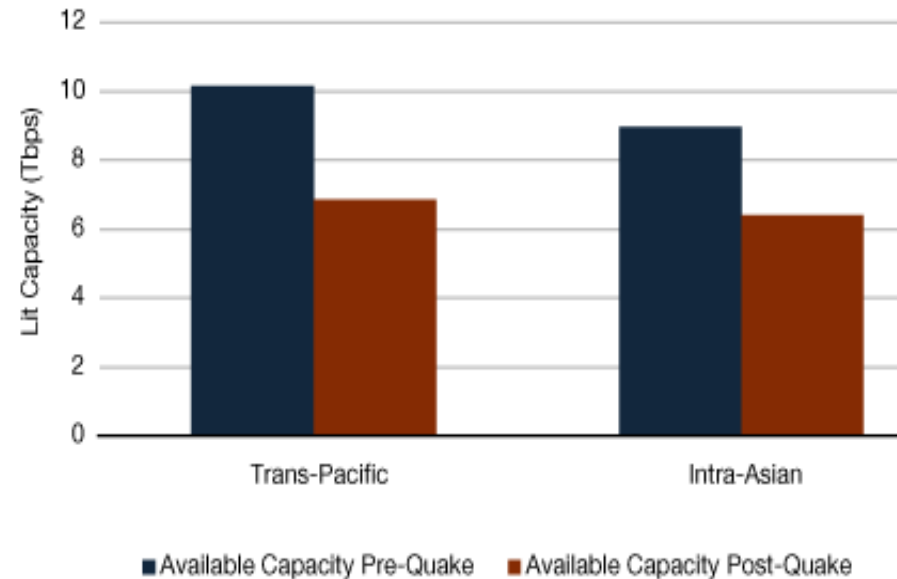

Service available

Service interrupted

As of Apr. 26

Restored service areas to almost pre-earthquake levels

## NTTDoCoMo disaster recovery scheme

## Collaborative efforts to find MA 370 Boeing 777-200

- Plane was announced missing : March 8 2014
- Digital globe imagery were taken on March 9 2014
- Imagery were made available to public using Tomnod a project owned by DigitalGlobe that uses crowdsourcing to identify objects and places in satellite images
- Relevant networks: Tomnod; Redit; Tweeter;CNN iReport

# Results

- More than 115,000 volunteers joined the efforts (100K/min)
- 100 million page views posted in the first 34h
- 2 million satellite pages/ 10 minutes.
- Site went down after few hours
- Mike Seberger, CNN iReport was the 8<sup>th</sup> most popular of all-time.

# Fire chat – Network less chat

- On the 2014 September protest in Hong Kong, protestors used the Israeli App FireChat to avoid the in availability of the network.
- They were asking for supply and help from each other
- FireChat was proven as the best communication at that given scenario

# What and where using Firechat

# YEVO (Yes in Zulu language)

- An in FB like social network that allow free live video streaming for followers on the network
- User Generated video outlet
- Live video through a tweeter feed
- Flashback mode for late update
- **When used with geotagged tweets allow users to send geotagged videos**

Your story,  
in real time.

## “Meet the Zero characters communication tool”

- 8 hours of prototype development
- 110K Downloads per day (raised 1M\$)
- Context based Language-less communication

WANNA SAY "THINKING  
'BOUT YOU" TO YOUR  
LOVE?

JUST YO

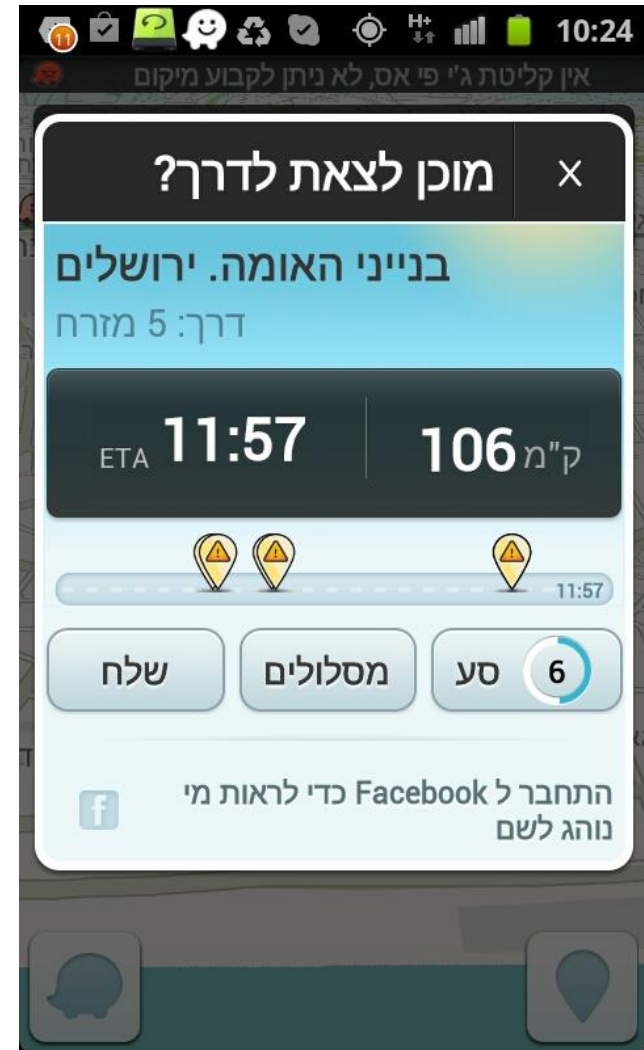

# A new form of Geo location communication is forming

- New Terms to be used :
  - Post Disaster User Experience
  - Adaptive BW services
  - Self deployed networks
- Strong geo location capabilities both in frontend and in backend to identify potential activity/anomaly
- C2C/ B2C services based on location based social/crowd sourced efforts are growing rapidly
- G2C services becomes a big question mark as technology speeds up

# The 10-14 December 2013 Alexa storm

# The Burma Way – Waze version

# Summary

- Location based social media increases the community resilience in resource constrained situations
- Services that are used in every day life will become a life saving tool and a port off call for users in disaster events
- Utilization of location based social media will become a necessity
- GNSS, mobile networks are still critical enablers
- Users become more accessible and thus new terminology is to be addressed
- Governments need to integrate in a changing communication environment

**Location Based Social applications  
and crowd sourced efforts future  
role in disaster management  
scenarios**

**Thank You!**
